Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In exceptional circumstances, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example), it may decide by a simple majority vote of its participating members to publish a Technical Report. A Technical Report is entirely informative in nature and does not have to be reviewed until the data it provides are considered to be no longer valid or useful.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TR 11954 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 21, *Electrically propelled road vehicles*.

Introduction

Fuel cell vehicles (FCV) include the following types:

- pure fuel cell vehicles (PFCV), in which the fuel cell system is the only on-board energy source for propulsion and auxiliary systems;
- fuel cell hybrid electric vehicles (FCHEV), in which the fuel cell system is integrated with an on-board rechargeable energy storage system (RESS) for electric energy supply to propulsion and auxiliary systems.

FCHEV design options include the following:

- a) externally chargeable or non-externally chargeable;
- b) rechargeable energy storage system (RESS): battery or capacitor;
- c) driver-selected operating modes: if FCHEV has no driver-selected operating mode, it has only an FCHEV mode.

Table 1 shows the classification of FCHEV.

	Chargeability	Operating mode
FCHEV	externally chargeable	FCHEV mode
	non-externally chargeable	EV mode
		FCHEV mode
		EV mode

This Technical Report is applicable to PFCV and to non-externally chargeable FCHEV with FCHEV mode only (see shaded boxes in Table 1).

Fuel cell road vehicles — Maximum speed measurement

1 Scope

This Technical Report describes test procedures for measuring the maximum road speed of fuel cell passenger cars and light duty trucks which use compressed hydrogen and which are not externally chargeable, in accordance with national or regional standards or legal requirements.

2 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

2.1

rechargeable energy storage system

RESS

system that stores energy for delivery of electric energy and that is rechargeable

EXAMPLE Batteries, capacitors.

2.2

RESS state of charge

RESS SOC

residual capacity of RESS available to be discharged

NOTE RESS state of charge is normally expressed as a percentage of full charge.

<https://standards.iteh.ai/catalog/standards/iso/3a30ad15-0993-4863-a6c3-32de68e91fd5/iso-tr-11954-2008>

2.3

fuel cell hybrid electric vehicle operation mode

FCHEV operation mode

mode of an FCHEV in which both RESS and fuel cell system are used sequentially or simultaneously for vehicle propulsion

NOTE The fuel cell system can also charge the RESS during propulsion or standstill.

2.4

maximum speed

highest average speed that the vehicle can maintain throughout a specified test

2.5

test mass

mass of a vehicle prepared for a defined test procedure

3 Parameters, units and accuracy of measurements

Table 2 shows parameters and their units and accuracy.

Table 2 — Parameters, units and accuracy of measurements

Parameter	Unit	Accuracy
Time	s	± 0,1 s
Distance	m	± 0,1 %
Air temperature	°C or K	± 1 °C or ± 1 °K
Air pressure	kPa	± 1 kPa
Speed	km/h	± 1 % or ± 0,1 km/h whichever is greater
Mass	kg	± 0,5 %

4 Descriptions

4.1 General

The maximum speed of the vehicle should be measured in accordance with the descriptions in this clause.

4.2 Preparation of the vehicle

The configuration of the vehicle and its attitude should be as determined by the manufacturer. In addition, the vehicle should be clean, the windows and air entries should be closed and only the accessories necessary for the operation of the vehicle for the purposes of the test should be in use. The viscosity of the oils for the mechanical moving parts and the tyre pressures (for operation under full load at maximum speed) should conform to the specifications of the vehicle manufacturer.

The running in of the transmission and tyres should be carried out in accordance with the manufacturer's instructions.

The fuel used should be the commercial grade for the type of vehicle tested or, in the event of a dispute, one of those prescribed in ISO/TS 14687-2.

4.3 Track characteristics

4.3.1 General

The measurements should be taken on a straight track (see 4.3.2) and/or a loop track (see 4.3.3). The surface of the track should be hard, smooth, clean and dry, and should give good adhesion.

4.3.2 Measurement on straight track

4.3.2.1 Lengths

The length, L , in metres, should be selected in relation to the precision of the apparatus and the method used for measuring the time, t , of the run, in seconds, so that the actual speed can be determined to within ± 1 %. The length of the measuring zone should be at least 1 000 m. The length actually used for the measurement should be recorded in the test report.
