Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available **free of charge** from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/ipr>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This European Standard (Telecommunications series) has been produced by ETSI Project Digital Enhanced Cordless Telecommunications (DECT).

The present document is part 1 of a multi-part EN covering the DECT/ISDN interworking for intermediate system configuration, as identified below:

- Part 1:** "Profile Test Specification (PTS) summary";
- Part 2: "Profile Specific Test Specification (PSTS) for Portable radio Termination (PT)";
- Part 3: "Profile Specific Test Specification (PSTS) for Fixed radio Termination (FT)".

National transposition dates	
Date of adoption of this EN:	25 December 1998
Date of latest announcement of this EN (doa):	31 March 1999
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	30 September 1999
Date of withdrawal of any conflicting National Standard (dow):	30 September 1999

1 Scope

The present document specifies the PTS summary referencing all the documents necessary for the conformance testing of the Digital Enhanced Cordless Telecommunications/Integrated Services Digital Network (DECT/ISDN) Interworking for Intermediate system configuration Profile (IIP) as specified in ETS 300 822 [33].

This Profile Test Specification (PTS) summary together with the documents it references constitute the DECT/ISDN IIP PTS.

The present document has the following structure:

- clause 4 contains general information relative to the profile including references to the related documents (standards);
- clause 5 contains a summary and references to the documents (standards) relevant for each of protocol layers to be tested.

The ISO standard for the methodology of conformance testing ISO/IEC 9646 [34] to [40] is used as the basis for the test methodology, and as the basis for test case specification.

2 Normative references

References may be made to:

- a) specific versions of publications (identified by date of publication, edition number, version number, etc.), in which case, subsequent revisions to the referenced document do not apply; or
- b) all versions up to and including the identified version (identified by "up to and including" before the version identity); or
- c) all versions subsequent to and including the identified version (identified by "onwards" following the version identity); or
- d) publications without mention of a specific version, in which case the latest version applies.

A non-specific reference to an ETS shall also be taken to refer to later versions published as an EN with the same number.
