## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2. The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 38500 was prepared by Standards Australia (as AS8015:2005) and was adopted, under a "fast-track procedure" by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, in parallel with its approval by national bodies of ISO and IEC.

ISO/IEC 38500 is a high level, principles based advisory standard. In addition to providing broad guidance on the role of a governing body, it encourages organizations to use appropriate standards to underpin their governance of IT.

At the time of publication of this standard, JTC1 is continuing efforts to develop further documents relating to governance of Information Technology. These documents, which are likely to be released in the future as ISO/IEC Technical Reports and, possibly, as Standards, are expected to address a range of topics including:

- Governance of Projects involving IT Investment
- Governance of IT used in ongoing Business Operations

## Introduction

The objective of this standard is to provide a framework of principles for Directors to use when evaluating, directing and monitoring the use of information technology (IT) in their organizations.

Most organizations use IT as a fundamental business tool and few can function effectively without it. IT is also a significant factor in the future business plans of many organizations.

Expenditure on IT can represent a significant proportion of an organization's expenditure of financial and human resources. However, a return on this investment is often not realized fully and the adverse effects on organizations can be significant.

The main reasons for these negative outcomes are the emphasis on the technical, financial and scheduling aspects of IT activities rather than emphasis on the whole business context of IT use.

This standard provides a framework for effective governance of IT, to assist those at the highest level of organizations to understand and fulfil their legal, regulatory, and ethical obligations in respect of their organizations' use of IT. The framework comprises definitions, principles and a model.

This standard is aligned with the definition of Corporate Governance that was published as a Report of the Committee on the Financial Aspects of Corporate Governance (the Cadbury Report) in 1992. The Cadbury Report also provided the foundation definition of Corporate Governance in the OECD Principles of Corporate Governance in 1999 (revised in 2004). Users of this standard are encouraged to familiarise themselves with the Cadbury Report and the OECD Principles of Corporate Governance.

Governance is distinct from management, and for the avoidance of confusion, the two concepts are clearly defined in the standard.

While this standard is addressed primarily to the governing body, which may in turn direct that certain actions be taken by the management of the organization, it also allows that, in some (typically smaller) organizations, the members of the governing body may also occupy the key roles in management. In this way, it ensures that the standard is applicable for all organizations, from the smallest, to the largest, regardless of purpose, design and ownership structure.

The standard is also intended to inform and guide those involved in designing and implementing the management system of policies, processes, and structures that support governance.

# Corporate governance of information technology

## 1 SCOPE, APPLICATION AND OBJECTIVES

### 1.1 Scope

This standard provides guiding principles for directors of organizations (including owners, board members, directors, partners, senior executives, or similar) on the effective, efficient, and acceptable use of Information Technology (IT) within their organizations.

This standard applies to the governance of management processes (and decisions) relating to the information and communication services used by an organization. These processes could be controlled by IT specialists within the organization or external service providers, or by business units within the organization.

It also provides guidance to those advising, informing, or assisting directors. They include:

- senior managers;
- members of groups monitoring the resources within the organization;
- external business or technical specialists, such as legal or accounting; specialists, retail associations, or professional bodies;
- vendors of hardware, software, communications and other IT products;
- internal and external service providers (including consultants);
- IT auditors.

### 1.2 Application

This standard is applicable to all organizations, including public and private companies, government entities, and not-for-profit organizations. The standard is applicable to organizations of all sizes from the smallest to the largest, regardless of the extent of their use of IT.

### 1.3 Objectives

The purpose of this standard is to promote effective, efficient, and acceptable use of IT in all organizations by:

- assuring stakeholders (including consumers, shareholders, and employees) that, if the standard is followed, they can have confidence in the organization's corporate governance of IT;
- informing and guiding directors in governing the use of IT in their organization; and
- providing a basis for objective evaluation of the corporate governance of IT.

### 1.4 Benefits of Using This Standard

#### 1.4.1 General

This standard establishes principles for the effective, efficient and acceptable use of IT. Ensuring that their organisations follow these principles will assist

directors in balancing risks and encouraging opportunities arising from the use of IT.

This standard establishes a model for the governance of IT. The risk of directors not fulfilling their obligations is mitigated by giving due attention to the model in properly applying the principles.

The standard establishes a vocabulary for the Governance of IT.

### 1.4.2 Conformance of the organization

Proper corporate governance of IT may assist directors in assuring conformance with obligations (regulatory, legislation, common law, contractual) concerning the acceptable use of IT.

Inadequate IT systems can expose the directors to the risk of not complying with legislation. For example, in some jurisdictions, directors could be held personally accountable if an inadequate accounting system results in tax not being paid.

Processes dealing with IT incorporate specific risks that must be addressed appropriately. For example, directors could be held accountable for breaches of:

- security standards;
- privacy legislation;
- spam legislation;
- trade practices legislation;
- intellectual property rights, including software licensing agreements;
- record keeping requirements;
- environmental legislation and regulations;
- health and safety legislation;
- accessibility legislation;
- social responsibility standards.

Directors using the guidelines in this standard are more likely to meet their obligations.

### 1.4.3 Performance of the organization

Proper corporate governance of IT assists directors to ensure that IT use contributes positively to the performance of the organization, through:

- appropriate implementation and operation of IT assets;
- clarity of responsibility and accountability for both the use and provision of IT in achieving the goals of the organization;
- business continuity and sustainability;
- alignment of IT with business needs;
- efficient allocation of resources;
- innovation in services, markets, and business;
- good practice in relationships with stakeholders;
- reduction in the costs for an organization; and
- actual realization of the approved benefits from each IT investment.

## 1.5 Referenced Documents

The following documents are referred to in this Standard:

---

Report of the Committee on the Financial Aspects of Corporate Governance, Sir Adrian Cadbury, London, 1992 ISBN 0 85258 913 1

## 1.6 Definitions

For the purpose of this Standard, the definitions below apply.

It is expected that an organization will adapt the terminology used within this standard to suit their circumstances or structure.

### 1.6.1 Acceptable

Meeting stakeholder expectations that are capable of being shown as reasonable or merited.

### 1.6.2 Corporate governance

The system by which organizations are directed and controlled. (adapted from Cadbury 1992 and OECD 1999)

### 1.6.3 Corporate governance of IT

The system by which the current and future use of IT is directed and controlled.

Corporate governance of IT involves evaluating and directing the use of IT to support the organization and monitoring this use to achieve plans. It includes the strategy and policies for using IT within an organization.

### 1.6.4 Competent

Having the combination of knowledge, formal and informal skills, training, experience and behavioural attributes required to perform a task or role.

### 1.6.5 Director

Member of the most senior governing body of an organization. Includes owners, board members, partners, senior executives or similar, and officers authorized by legislation or regulation.

### 1.6.6 Human behaviour

The understanding of interactions among humans and other elements of a system with the intent to ensure well being and systems performance. Human

behaviour includes culture, needs and aspirations of people as individuals and as groups.

Note: In respect of IT, there are numerous groups or communities of humans, each with their own needs, aspirations and behaviours. For example, people who use information systems might exhibit needs relating to accessibility and ergonomics, as well as availability and performance. People whose job roles are changing because of the use of IT might exhibit needs relating to communication, training, and reassurance. People involved in building and operating IT capabilities might exhibit needs relating to working conditions and development of skills.

### **1.6.7 Information technology (IT)**

Resources required to acquire, process, store and disseminate information. This term also includes "Communication Technology (CT)" and the composite term "Information and Communication Technology (ICT)".

### **1.6.8 Investment**

Allocation of human, capital and other resources to achieve defined objectives and other benefits.

### **1.6.9 Management**

The system of controls and processes required to achieve the strategic objectives set by the organisation's governing body. Management is subject to the policy guidance and monitoring set through corporate governance.

### **1.6.10 Organization**

Any company, corporation, government, not-for-profit or other legally constituted body including associations, clubs, partnerships, government agencies, publicly listed companies, private companies and sole traders that has its own function(s) and administration.

### **1.6.11 Policy**

Clear and measurable statements of preferred direction and behaviour to condition the decisions made within an organization.

### **1.6.12 Proposal**

Compilation of benefits, costs, risks, opportunities, and other factors applicable to decisions to be made. Includes business cases.

### **1.6.13 Resources**

People, procedures, software, information, equipment, consumables, infrastructure, capital and operating funds, and time.

### 1.6.14 Risk

Combination of the probability of an event and its consequence (ISO/IEC Guide 73).

Note: The consequences are impacts upon the organization. They can be negative, as in common usage, or 'opportunities' in common usage.

### 1.6.15 Risk management

Coordinated activities to direct and control an organization with regard to risk (ISO/IEC Guide 73).

### 1.6.16 Stakeholder

Any individual, group or organization who may affect, be affected by, or perceive themselves to be affected by, a decision or activity (adapted from ISO/IEC Guide 73).

### 1.6.17 Strategy

An organization's overall plan of development, describing the effective use of resources in support of the organization in its future activities. It involves setting objectives and proposing initiatives for action.

### 1.6.18 Use of IT

The planning, design, development, deployment, operation, management, and application of IT to meet the needs of the business. It includes both the demand for, and the supply of, IT services by internal business units, specialist IT units, or external suppliers and utility services (such as those providing software as services).
