Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 25437 was prepared by Ecma International (as ECMA-366) and was adopted, under a special “fast-track procedure”, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, in parallel with its approval by national bodies of ISO and IEC.

This second edition cancels and replaces the first edition (ISO/IEC 25437:2006), which has been technically revised.

Introduction

ISO/IEC 22534, Application Session Services, specifies XML protocols that can be used to create and manage application sessions that are independent of the transport layer protocols. This International Standard (WS-Session) specifies Web services for ISO/IEC 22534.

The ApplicationSessionTerminated operation of this International Standard is an outbound asynchronous event notification. For the Service Requester to receive the event notification from the Service Provider and from web services (e.g. ECMA-348) that use this International Standard for session management, it standardized the WS-BaseNotification Option and illustrated the use of WS-Eventing.

Information technology — Telecommunications and information exchange between systems — WS-Session — Web services for application session services

1 Scope

This International Standard specifies Web Services (in WSDL) and a SOAP binding for the Application Session Services defined in ISO/IEC 22534. The Application Session Services allow Applications to create and maintain a relationship with Servers termed Application Session. The Web services specified herein allow Service Requesters (Applications in ISO/IEC 22534) and Service Providers (Servers in ISO/IEC 22534) to create and maintain such Application Sessions.

This International Standard builds upon and imports the XML schema definitions from ISO/IEC 22534. The method of making the WSDL description of the specified services available to Service Provider and Requester is out of the scope of this International Standard.

The ApplicationSessionTerminated operation of this International Standard is an outbound asynchronous event notification that Service Requesters receive from the Service Provider. Service Requester may also receive the event notification from web services, e.g. ECMA-348, that use this International Standard for session management.

This International Standard specifies the event subscription and notification behaviors.

Annex A specifies the event subscription mechanism using WS-BaseNotification Option.

Annex B specifies the asynchronous subscription response Option for the two event subscription mechanisms.

Annex C illustrates the event subscription mechanism using WS-Eventing.

Annex D shows an example WS-Session WSDL binding with SOAP/HTTP.

Annex E lists SOAP XML Templates for ISO/IEC 22534 messages.

Annex F lists some SOAP XML Templates for WS-Eventing messages.

Annex G lists some SOAP XML Templates for WS-BaseNotification messages.

Annex H provides a summary of changes.

2 Conformance

The Service Requester and Service Provider conform to the Application and Server conformance specified in ISO/IEC 22534, using the WSDL definitions, SOAP bindings, and event subscription and notification specified in Clauses 5, 6 and 7 respectively.

The Service Provider may implement the WS-BaseNotification event subscription Option as specified in Annex A.

The Service Provider's WSDL shall include the implemented event subscription operations in the WSDL specified in Clause 5.

The Service Requester shall itself initiate or delegate event subscription.

The Service Provider supports synchronous responses to event subscriptions and may implement the asynchronous response Option specified in Annex B.

4 Terms, definitions and namespaces

4.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

4.1.1

Service Requester

Web Service equivalent of Application in ISO/IEC 22534

4.1.2

Service Provider

Web Service equivalent of Server in ISO/IEC 22534

4.1.3

Application Session

association between an application and a server

4.2 Namespaces

This International Standard uses these Ecma prefixes and namespaces:

1. **aps** (http://www.ecma-international.org/standards/ecma-354/appl_session): This International Standard imports all XML messages defined in ECMA-354 (ISO/IEC 22534) from the **aps** namespace.
2. **wss** (<http://www.ecma-international.org/standards/ecma-366/ws-session/ed2>): The WSDL target namespace for this International Standard.

This International Standard refers to these other prefixes and namespaces:

1. **wSDL** (<http://schemas.xmlsoap.org/wSDL>): This contains the W3C WSDL 1.1 schema.
2. **xs** (<http://www.w3.org/2001/XMLSchema>): This contains the W3C XML Schema definition.
3. **S** (<http://schemas.xmlsoap.org/wSDL/soap>): This contains the W3C SOAP bindings for WSDL 1.1.
4. **wsa** (<http://www.w3.org/2005/08/addressing>): The namespace for WS-Addressing 1.0.
5. **wsnt** (<http://docs.oasis-open.org/wsn/b-2.xsd>): The target namespace for WS-BaseNotification 1.3.

6 Service Provider WSDL SOAP Binding

This clause specifies the binding template of the abstract WSDL definitions in Clause 5 with SOAP Messages without a specific transport protocol. The binding template uses XML Schema data types instead of values for some attributes. Any actual SOAP binding to a transport shall contain elements and attributes in this binding template where the attributes shall be substituted by permitted values.

```

<definitions
  xmlns="http://schemas.xmlsoap.org/wsdl/"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/"
