ISO/IEC DIS 13186

<https://standards.iteh.ai/catalog/standards/sist/e1f51fdf-4720-4c56-bca5-27ee59d0e5dc/iso-iec-dis-13186>

The version of this document received for DIS ballot has been distilled to PDF 1.6. Unfortunately it is not possible at present to obtain a version of the document in PDF 1.4. Rather than delay the document or redistil it at the ISO Central Secretariat and risk the introduction of changes, it has been decided exceptionally to launch the DIS ballot with the current PDF 1.6 version.

If you encounter any problems in either viewing or printing this document, please inform the ISO Central Secretariat as soon as possible: projects@iso.org

In accordance with the provisions of Council Resolution 21/1986 this DIS is circulated in the English language only.

Conformément aux dispositions de la Résolution du Conseil 21/1986, ce DIS est distribué en version anglaise seulement.

THIS DOCUMENT IS A DRAFT CIRCULATED FOR COMMENT AND APPROVAL. IT IS THEREFORE SUBJECT TO CHANGE AND MAY NOT BE REFERRED TO AS AN INTERNATIONAL STANDARD UNTIL PUBLISHED AS SUCH.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

NOTE FROM ITTF

The current fast track draft is the American National Standard ANSI INCITS 388:2008, submitted by the US National Committee of the IEC / US Member Body of ISO to the ISO/IEC JTC 1 Fast Track process. If the fast-track draft is approved, it will replace ISO/IEC 24775:2007, "Information Technology — Storage management", of which it constitutes a technical revision.

This draft International Standard is submitted for JTC 1 national body vote under the Fast-Track Procedure.

In accordance with Resolution 30 of the JTC 1 Berlin Plenary 1993, the proposer of this document recommends assignment of ISO/IEC 13186 to JTC 1/SC 25.

“FAST-TRACK” PROCEDURE

1 Any P-member and any Category A liaison organization of ISO/IEC JTC 1 may propose that an existing standard from any source be submitted directly for vote as a DIS. The criteria for proposing an existing standard for the fast-track procedure are a matter for each proposer to decide.

2 The proposal shall be received by the ITTF which will take the following actions.

2.1 To settle the copyright and/or trade mark situation with the proposer, so that the proposed text can be freely copied and distributed within JTC 1 without restriction.

2.2 To assess in consultation with the JTC 1 secretariat which SC is competent for the subject covered by the proposed standard and to ascertain that there is no evident contradiction with other International Standards.

2.3 To distribute the text of the proposed standard as a DIS. In case of particularly bulky documents the ITTF may demand the necessary number of copies from the proposer.

3 The period for combined DIS voting shall be five months. In order to be accepted the DIS must be supported by 75 % of the votes cast (abstention is not counted as a vote) and by two-thirds of the P-members voting of JTC 1.

4 At the end of the voting period, the comments received, whether editorial only or technical, will be dealt with by a working group appointed by the secretariat of the relevant SC.

5 If, after the deliberations of this WG, the requirements of 3 above are met, the amended text shall be sent to the ITTF by the secretariat of the relevant SC for publication as an International Standard.

If it is impossible to agree to a text meeting the above requirements, the proposal has failed and the procedure is terminated.

In either case the WG shall prepare a full report which will be circulated by the ITTF.

6 If the proposed standard is accepted and published, its maintenance will be handled by JTC 1.

Approved May 21, 2008

American National Standards Institute, Inc.

Abstract

This specification documents a secure and reliable interface that allows storage management systems to identify, classify, monitor, and control physical and logical resources in a Storage Area Network.

American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

[ISO/IEC DIS 13186](https://standards.iteh.ai/catalog/standards/sist/e1f51fd4-4720-4c56-bca5-27ee59d0e5dc/iso-iec-dis-13186)

<https://standards.iteh.ai/catalog/standards/sist/e1f51fd4-4720-4c56-bca5-27ee59d0e5dc/iso-iec-dis-13186>

CAUTION: The developers of this standard have requested that holders of patents that may be required for the implementation of the standard disclose such patents to the publisher. However, neither the developers nor the publisher have undertaken a patent search in order to identify which, if any, patents may apply to this standard. As of the date of publication of this standard and following calls for the identification of patents that may be required for the implementation of the standard, no such claims have been made. No further patent search is conducted by the developer or publisher in respect to any standard it processes. No representation is made or implied that licenses are not required to avoid infringement in the use of this standard.

10.4.5.1 Overview	1405
10.4.5.2 Required Model Support	1405
10.5 Directory Server	1405
10.5.1. SLP Functions	1406
10.5.2. CIM-XML Protocol Functions	1406
10.5.3. Security Considerations	1406
10.5.4. Lock Management Functions.....	1406
10.6 Combined Roles on a Single System	1406
10.6.1. Overview	1406
10.6.2. General Purpose SMI-S Server as a Profile Aggregator	1406
10.6.2.1 SLP Functions	1406
10.6.2.2 CIM-XML Protocol Functions	1406
10.6.2.3 Security Considerations	1406
10.6.2.4 Lock Manager Functions	1406
11. Service Discovery	1407
11.1 Objectives.....	1407
11.2 Overview	1407
11.3 SLP Messages	1409
11.4 Scopes	1410
11.5 Services Definition.....	1410
11.5.1. Service Type.....	1411
11.5.2. Service Attributes.....	1411
11.6 User Agents (UA)	1412
11.7 Service Agents (SAs)	1413
11.8 Directory Agents (DAs).....	1414
11.9 Service Agent Server (SA Server).....	1414
11.9.1. General Information	1414
11.9.2. SA Server (SAS) Implementation	1414
11.9.3. SA Server (SAS) Clients	1415
11.9.3.1 Description	1415
11.9.3.2 SAS Client Requests – SA Server Responses	1415
11.9.4. SA Server Configuration	1415
11.9.4.1 Overview	1415
11.9.4.2 SLP Configuration File	1415
11.9.4.3 Programmatic Configuration.....	1416
11.9.4.4 DHCP Configuration.....	1416
11.9.4.5 Scope	1416
11.9.5. SA Server Discovery.....	1417
11.9.6. SAS Client Registration	1417
11.10 'Standard WBEM' Service Type Templates.....	1417
11.11 SLP Bibliography	1421
12. Installation and Upgrade.....	1423
12.1 Introduction.....	1423
12.2 Role of the Administrator	1423
12.3 Goals	1423
12.3.1. Non-Disruptive Installation and De-installation	1423
12.3.2. Plug-and-Play	1423
