Partie 7: Essais de conformité

AMENDEMENT 5: Essai de conformité pour outils de signature d'image

Please see the administrative notes on page iii

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 5 to ISO/IEC 15938-7:2003 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

Part 7: Conformance testing

AMENDMENT 5: Conformance testing for image signature tools

Page 23, Table 3

Add the following row after “Face recognition”.

Image Signature	ImageSignature
-----------------	----------------

Page 23, immediately before 7.4

Insert the following new subclauses.

7.3.5 Visual extraction methods

The extraction methods for most descriptors are not explicitly specified for tools defined in ISO/IEC 15938-3, therefore conformance testing of extraction methods is not required. The exception to this is the Image Signature descriptor for which the extraction method is explicitly defined in ISO/IEC 15938-3:2002/Amd.3:2009.

7.3.5.1 Image Signature Conformance

This Subclause specifies the conformance test for the image signature descriptor. An implementation of the image signature extraction method shall be referred to as an image signature extractor. To be conformant an image signature extractor shall pass the conformance test.

The conformance test is conducted on a set of 625 images. These images are named 000.jpg, 001.jpg, ..., 624.jpg and are in ImageSignatureConformanceTestset.zip. For all of the images in the conformance test reference image signature descriptors are provided. To verify conformance of an image signature extractor, test image signature descriptors shall be extracted from a set of images and compared to a set of reference image signature descriptors. In order for the image signature extractor being tested to pass the conformance test, each test image signature descriptor extracted shall match the corresponding reference image signature as specified in 7.3.5.1.1 and 7.3.5.1.2.

7.3.5.1.1 Global Image Signature Components

No more than 16 out of 512 bits shall differ for each of the GlobalSignatureA and GlobalSignatureB elements.

7.3.5.1.2 Local Image Signature Components

A one-to-one correspondence shall be established between the LocalSignature elements in the test image signature descriptor and the LocalSignature elements in the reference image signature descriptor. That correspondence shall be determined by considering the spatial location of the LocalSignatures, as represented by the Xcoord and Ycoord syntax elements. That is each LocalSignature element in the test image signature descriptor shall correspond to the one LocalSignature element in the reference image signature descriptor with the minimum spatial distance. The spatial distance, d , between two local signature elements, LS_t and LS_r , is given by:

$$d(LS_t, LS_r) = \sqrt{(x_t - x_r)^2 + (y_t - y_r)^2} ,$$

where

x_t and y_t are respectively the Xcoord and Ycoord components of LS_t and

x_r and y_r are respectively the Xcoord and Ycoord components of LS_r .

Corresponding LocalSignature elements shall be considered to match if not more than 3 bits out of 60 differ. For each image signature descriptor at least 78 out of 80 corresponding LocalSignature components must match.
