Contents

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This European Standard (EN) has been produced by ETSI Technical Committee Reconfigurable Radio Systems (RRS).

The present document is part 3 of a multi-part deliverable covering the Mobile Device (MD) information models and protocols, as identified below:

Part 1:   "Multiradio Interface (MURI)";

Part 2:   "Reconfigurable Radio Frequency Interface (RRFI)";

Part 3:   "Unified Radio Application Interface (URAI)";

Part 4:   "Radio Programming Interface (RPI)".

National transposition dates	
Date of adoption of this EN:	11 June 2018
Date of latest announcement of this EN (doa):	30 September 2018
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	31 March 2019
Date of withdrawal of any conflicting National Standard (dow):	31 March 2019

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

1   Scope

The scope of the present document is to define an information model and protocol for unified radio application interface for mobile device reconfiguration. The work is based on the Use Cases defined in ETSI TR 102 944 [i.1], on the system requirements defined in ETSI EN 302 969 [1] and on the radio reconfiguration related architecture for mobile devices defined in ETSI EN 303 095 [i.2] and on the mobile device information models and protocols related Multiradio Interface defined ETSI EN 303 146-1 [i.3].

2   References

2.1   Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at https://docbox.etsi.org/Reference/.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[1]   ETSI EN 302 969: "Reconfigurable Radio Systems (RRS); Radio Reconfiguration related requirements for Mobile Devices".

2.2   Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

3   Definitions and abbreviations

3.1   Definitions

For the purposes of the present document, the following terms and definitions apply:

association: logical communication link to a Radio Access Network or a peer equipment

NOTE 1:   Typically, some control signalling is necessary to maintain the association. No user data transfer may occur with only an association present, but a data flow may be established into an association for this purpose.

NOTE 2:   Peer equipment is any communication counterpart of a reconfigurable mobile device. It can be reached by establishing a logical communication link (i.e. an association) between the reconfigurable mobile device and peer equipment.

channel: designated part of the information transfer capability having specified characteristics, provided at the user network interface

NOTE: It is the over-the-air wireless propagation channel which is used to convey an information signal from transmitter to receiver. This definition is specified in ETSI EN 303 095 [i.2].

communication services layer: layer related to communication services supporting generic applications

NOTE: A communication services layer supports generic applications like Internet access. In the present document, it consists of Administrator, Mobility Policy Manager (MPM), Networking stack and Monitor.

link: connection from one location to another through a given Radio Access Technology for the purpose of transmitting and receiving digital information

Radio Application (RA): software which enforces the generation of the transmit RF signals or the decoding of the receive RF signals

NOTE 1:   The Software is executed on a particular radio platform or an RVM as part of the radio platform.

NOTE 2:   RAs might have different forms of representation. They are represented as:

- source codes including Radio Library calls of Radio Library native implementation and Radio HAL calls;

- IRs including Radio Library calls of Radio Library native implementation and radio HAL calls;

- Executable codes for a particular radio platform.

radio computer: part of mobile device hardware working under ROS control and on which RAs are executed

NOTE: A Radio Computer typically includes programmable processors, hardware accelerators, peripherals, etc. RF part is considered to be part of peripherals.

Radio Control Framework (RCF): control framework which, as a part of the OS, extends OS capabilities in terms of radio resource management

NOTE: RCF is a control framework which consists of Configuration Manager (CM), Radio Connection Manager (RCM), Flow Controller (FC) and Multiradio Controller (MRC). The Resource Manager (RM) is typically part of OS.

3.2   Abbreviations

For the purposes of the present document, the following abbreviations apply:

ASN	Abstract Syntax Notation
ASN.1	Abstract Syntax Notation One
BLER	BLock Error Rate

CM	Configuration Manager
CSL	Communication Services Layer
FC	Flow Controller
ID	IDentification
MD	Mobile Device
MPM	Mobility Policy Manager
MRC	MultiRadio Controller
MURI	MUltiRadio Interface
OS	Operating System
RA	Radio Application
RAN	Radio Access Network
RAP	Radio Application Package
RAT	Radio Access Technology
RCF	Radio Control Framework
RCID	Radio Computer IDentification
RCM	Radio Connection Manager
RF	Radio Frequency
RM	Resource Manager
ROS	Radio Operating System
RPI	Radio Programming Interface
RRFI	Reconfigurable Radio Frequency Interface
RX	Receiver
SINR	Signal to Interference plus Noise Ratio
TX	Transmitter
UML	Unified Modelling Language
URA	Unified Radio Applications
URAI	Unified Radio Application Interface

4   Introduction

A reconfigurable MD is capable of running multiple radios simultaneously and of changing the set of radios by loading new Radio Application Package (RAP). All Radio Applications (RAs) are called Unified Radio Applications (URAs) when they exhibit a common behaviour from the reconfigurable MD's point of view [i.2]. In order to run multiple URAs, the reconfigurable MD will include Communication Services Layer (CSL), Radio Control Framework (RCF), Radio Platform and 4 sets of interfaces for their interconnection.
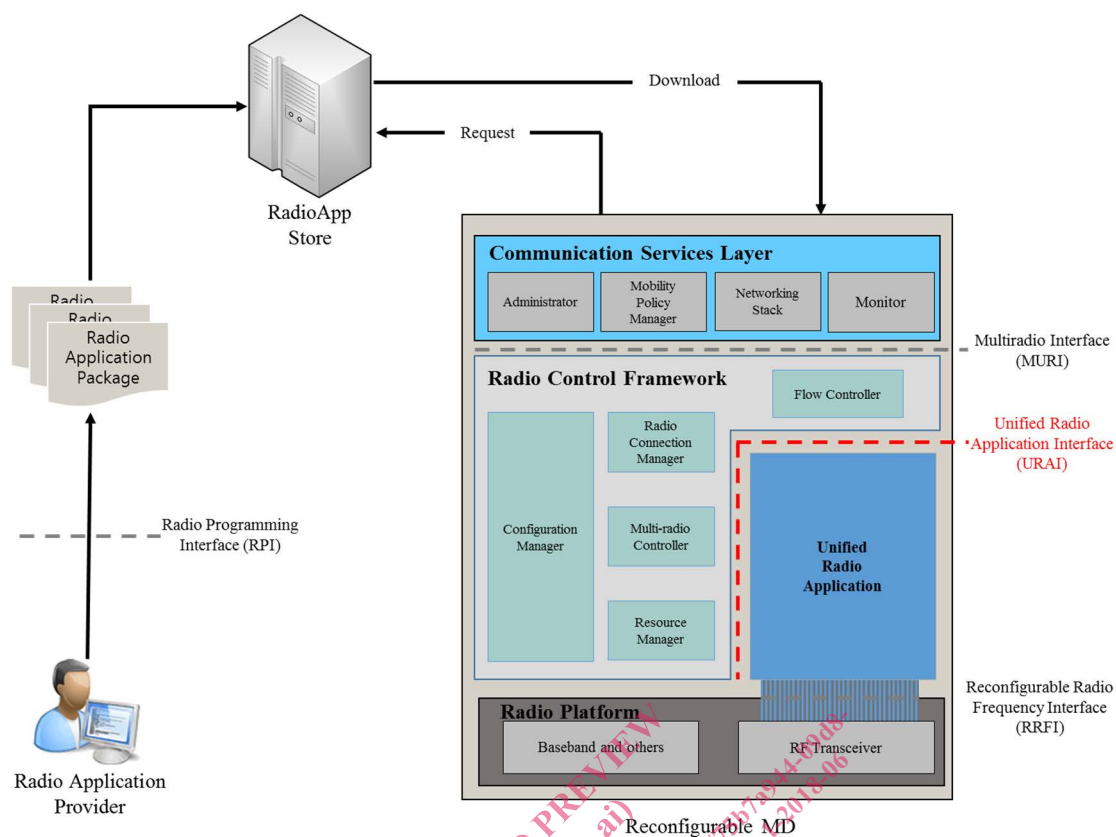

Figure 4.1: Four sets of interfaces for Reconfigurable MD

Figure 4.1 illustrates the Reconfigurable MD architecture with the 4 sets of interfaces, i.e.:

- MURI for interfacing CSL and RCF [i.3];

- RRFI for interfacing URA and RF Transceiver [i.4];

- URAI for interfacing URA and RCF which is the scope of the present document;

- RPI for allowing an independent and uniform production of RAs [i.5].
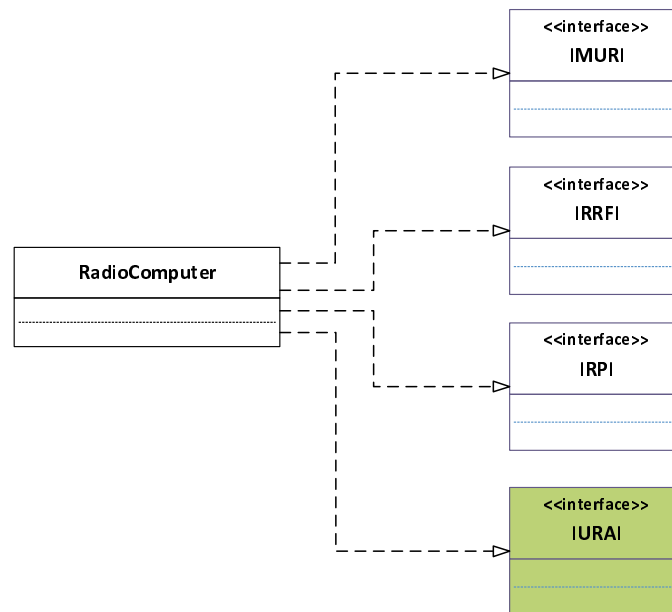

The present document defines URAI.

Figure 4.2: UML class diagram for Radio Computer interfaces

Figure 4.2 illustrates UML class diagram for Radio Computer interfaces. The reconfigurable MD may be seen as a Radio Computer where individual URAs are engineered as software entities [i.2].

The present document is organized as follows:

- clause 5 describes the system identification;

- clause 6 describes the notational tool for defining both information model classes and interface classes;

- clause 7 describes the information model for radio computer; and

- clause 8 describes the interface definition.

While UML is used for defining the information model and protocol related to URAI, other modelling languages could be used as well.

5 System Identification

5.1 Radio Computer Structure

Figure 5.1 illustrates how RCF and URA interact with each other using URAI.
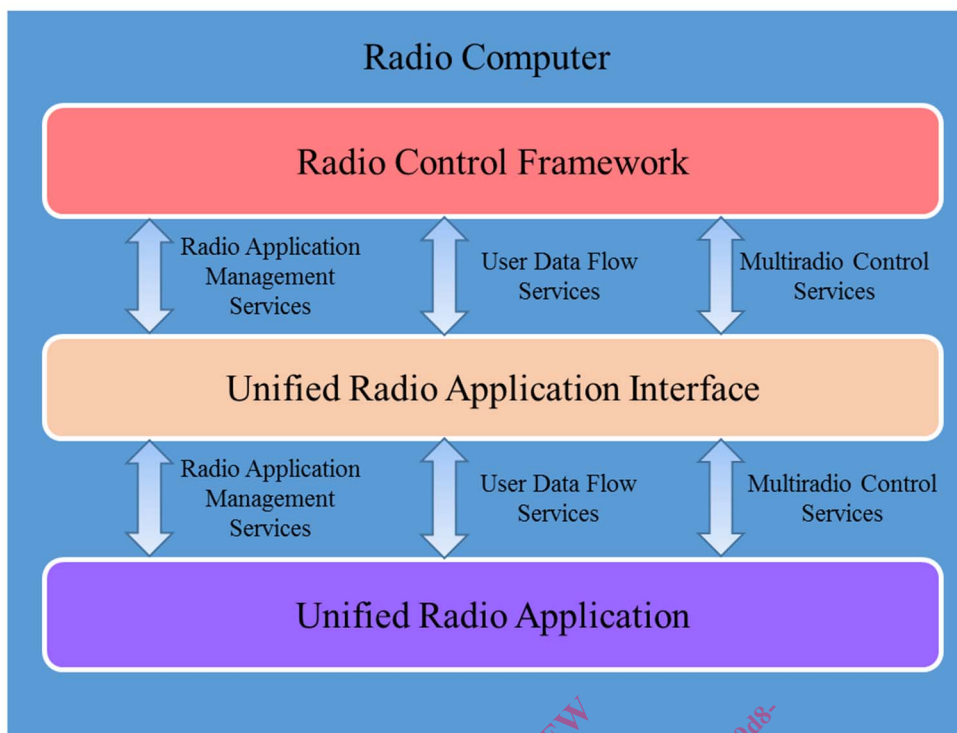

Figure 5.1: Interconnection between RCF and URA using URAI for Reconfigurable MD

As shown in figure 5.1, URAI supports 3 kinds of services:

- **Radio Application Management Services**

These services are used by Radio Connection Manager (RCM) which is included in the RCF, to control URA functions such as reporting of discovered Peer Equipments, creating/terminating association with Peer Equipment, starting/stopping communication with Peer Equipment, etc.

- **User Data Flow Services**

These services are used by Flow Controller (FC) which is included in the RCF, to transmit user data to URA, or used by URA to transmit received user data to FC. These services also include management of data flow, which is provided by FC.

- **Multiradio Control Services**

These services are used by Multiradio Controller (MRC) which is included in RCF, to manage spectral resource usage.

The RCF and URA are defined in ETSI EN 303 095 [i.2].

5.2 URAI System Requirement Mapping

The Radio Computer components above described shall support the URAI system requirements shown in table 5.1 and described in clause 6 of ETSI EN 302 969 [1].

**Table 5.1: Mapping of Radio Computer Components to
the system requirements described in ETSI EN 302 969 [1]**

Entity/Component/Unit	System Requirements [1]	Comments
Flow Controller	R-FUNC-RAT-05	The requirement is described in clause 6.1.5 of ETSI EN 302 969 [1].
	R-FUNC-RA-04	The requirement is described in clause 6.2.4 of ETSI EN 302 969 [1].
Multiradio Controller	R-FUNC-RAT-01	The requirement is described in clause 6.1.1 of ETSI EN 302 969 [1].
	R-FUNC-RAT-02	The requirement is described in clause 6.1.2 of ETSI EN 302 969 [1].
	R-FUNC-RAT-03	The requirement is described in clause 6.1.3 of ETSI EN 302 969 [1].
	R-FUNC-RAT-06	The requirement is described in clause 6.1.6 of ETSI EN 302 969 [1].
	R-FUNC-MDR-03	The requirement is described in clause 6.4.3 of ETSI EN 302 969 [1].
Radio Connection Manager	R-FUNC-RAT-04	The requirement is described in clause 6.1.4 of ETSI EN 302 969 [1].
	R-FUNC-RAT-05	The requirement is described in clause 6.1.5 of ETSI EN 302 969 [1].
	R-FUNC-RAT-06	The requirement is described in clause 6.1.6 of ETSI EN 302 969 [1].
	R-FUNC-RA-03	The requirement is described in clause 6.2.3 of ETSI EN 302 969 [1].
	R-FUNC-MDR-03	The requirement is described in clause 6.4.3 of ETSI EN 302 969 [1].

6   Notational Tools

6.1   Notational Tool for Information Model Classes

Table 6.1 shows a template for defining information model classes [i.6]. Each information model class is defined in clause 7.2 in accordance with the template shown in table 6.1.

NOTE: ASN.1 is used throughout the present document for abstract type definitions; however, alternative ways are possible and are not excluded.
