English Version

Safety of packaging machines - Part 5: Wrapping machines

Sécurité des machines d'emballage - Partie 5 :
Fardeleuses/enveloppeuses

Sicherheit von Verpackungsmaschinen - Teil 5:
Einschlagmaschinen

This European Standard was approved by CEN on 23 March 2006.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 415-5:2006) has been prepared by Technical Committee CEN/TC 146 "Packaging machines - Safety", the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2006, and conflicting national standards shall be withdrawn at the latest by December 2006.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

EN 415 Safety of packaging machines

Part 1: Terminology and classification of packaging machines and associated equipment

Part 2: Pre-formed rigid container packaging machines

Part 3: Form, fill and seal machines

Part 8: Strapping machines

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

Wrapping machines are used extensively in Europe, in an increasingly wide range of industries.

They contain several significant hazards and have the potential to cause serious injury.

This document is a type C standard as defined in EN ISO 12100-1:2003.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this standard.

When provisions of this type C standard are different from those which are stated in type A or B standards, the provisions of this type C standard take precedence.

iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN 415-5:2006

<https://standards.iteh.ai/catalog/standards/sist/e902cbf3-d174-4c28-be13-9af656abc573/sist-en-415-5-2006>

1 Scope

This European Standard applies to the following groups of machines:

- wrapping machines which partially wrap products (see Figures 1-4)
- wrapping machines which form a complete wrap without sealing (see Figures 5-7)
- wrapping machines which form a complete wrap with sealing (see Figures 8-14)
- shrinking equipment which is connected to wrapping machines covered by this standard (see Figures 15-16)

The individual machines are described in 3.2 of this standard.

This European Standard deals with safety requirements for machine design, construction, installation, commissioning, operation, adjustment, maintenance and cleaning of wrapping machines.

The extent to which hazards, hazardous situations and events are covered are indicated in Clause 4 of this document.

iTeh STANDARD PREVIEW (standards.iteh.ai)

Exclusions:
This standard is not applicable to larger examples of wrapping machines designed to handle products higher than 400 mm and wider than 400 mm. These machines are covered by EN 415-6.

This document is not applicable to wrapping machines which are manufactured before the date of publication of this document by CEN.
<https://standards.iteh.ai/catalog/standard/sist-en-415-5-2006-9af656abc573/sist-en-415-5-2006>

This standard does not consider the following hazards:

- Use of wrapping machines in potentially explosive atmospheres;
- Health, safety or hygiene hazards associated with the products that may be handled by the machines but does include general advice on this subject;
- Hazards that may be associated with electromagnetic emissions from wrapping machines;
- Hazards that may be associated with decommissioning wrapping machines.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in Clause 3 of EN ISO 12100-1:2003, EN 415-1:2000 and the following apply.

3.1 Definition of terms

3.1.1

band

strip of packaging material

3.1.2

cold adhesive

adhesive which is liquid at room temperature

3.1.3

deformable material

material which can be formed by the application of pressure only

3.1.4

change parts

machine parts designed to handle a specific product, packaging material or pack size or kind, that need to be changed when the machine is set up to handle a different product, packaging material or pack size or kind

3.1.5

film compensator

device which maintains tension in the film during the intermittent motion of the wrapping cycle. It is also called "tension roller assembly"

iTeh STANDARD PREVIEW (standards.iteh.ai)

3.1.6

SIST EN 415-5:2006

film (packaging material) reel

~~continuous sheet of paper, carton board, plastic film, metal foil or flexible laminate wound on a cylindrical core~~

3.1.7

film web

continuous sheet of paper, plastic film, metal foil or laminate

3.1.8

fold wrapping

wrap in which the material, due to its plasticity, keeps the fold

3.1.9

fin seal

seal in which the two edges of the material are joined together inner surface to inner surface

3.1.10

flexible packaging material

relatively thin paper, plastic film or flexible laminate

3.1.11

hand operated

machine functions or modes where the only power source is directly applied manual effort

3.1.12

hot melt adhesive

adhesive that is solid at room temperature and which is melted so that it can be applied

3.1.13

lay flat tubular film

continuous tube of plastic film usually supplied wound on a core

3.1.14**longitudinal seal**

seal made on a package in line with the direction of material travel in the machine

3.1.15**magazine**

mechanical assembly designed to hold stacks of cartons, carton blanks, leaflets, labels, lids or stackable containers

3.1.16**mandrel**

mechanical assembly around which a bag or carton is formed and also a film reel support

3.1.17**modified atmosphere**

when a normal atmosphere within a package or unit load is replaced by one or more selected gases. The objective is to extend shelf or storage life of the packaged products

3.1.18**overlap seal**

seal in which two edges of the material are joined together inner surface to outer surface

3.1.19**pack, package**

assembly of product and packaging materials produced by packaging machine

3.1.20**iTeh STANDARD PREVIEW****packaging material**

material used to make a package e.g paper, polypropylene

(standards.iteh.ai)

3.1.21**packaging material transport mechanism**

[SIST EN 415-5:2006](#)

mechanical assembly which transports packaging material through the packaging machine
<https://standards.iteh.ai/catalog/standards/sist/e902cbf3-d174-4c28-be13-9af656abc573/sist-en-415-5-2006>

3.1.22**paper laminate**

paper that has been coated or bonded to one or a number of other materials e.g. polyethylene or aluminium foil

3.1.23**product**

the substance or article being packed in a wrapping machine

3.1.24**roll wrapping**

wrap of cylindrical products with a roll shaped form

3.1.25**shrink wrapping**

process in which a package is wrapped in a thermoplastic film which is then heated so that the film shrinks and closely fits to the package

3.1.26**skin packaging**

packaging process in which a product is covered by a closely fitting usually transparent plastic film. The product is placed on a porous rigid paperboard sheet, which is often printed. Heated film is draped over it and vacuum is applied to draw the film tightly over the article

3.1.27**stretch film**

flexible, elastic plastic film which can be pulled tightly around a package. It may stick to itself on contact or require heat sealing
