Designation: D 4195 – 88 (Reapproved 1998)ε1

Standard Guide for Water Analysis for Reverse Osmosis Application[1]

This standard is issued under the fixed designation D 4195; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

ε[1] NOTE—Keywords were added editorially in December 1998.

1. Scope

1.1 This guide covers the analyses that should be performed on any given water sample if reverse osmosis application is being considered.

1.2 This guide is applicable to waters including brackish waters and seawaters but is not necessarily applicable to waste waters.

1.3 This is a guide only and should not be construed as a delineation of all ions known to exist in waters.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 *Definitions:*

3.1.1 For definitions of terms used in this guide, refer to Terminology D 1129.

3.2 *Definitions of Terms Specific to This Standard:*

3.2.1 For description of terms relating to reverse osmosis, refer to Test Method D 4194.

4. Summary of Guide

4.1 This guide consists of analyzing water samples for ions, gases, suspended material, and organics, as well as measuring the pH and temperature of the water.

5. Significance and Use

5.1 The performance of reverse osmosis membranes is strongly influenced by the composition of the feed solution. Overall salt rejection is dependent upon the ratio of monovalent to polyvalent ions as well as the sum total of ions present. The permeate flow rate of reverse osmosis devices is also

[1] This guide is under the jurisdiction of ASTM Committee D-19 on Water, and is the direct responsibility of Subcommittee D 19.08 on Membranes and Ion Exchange Materials.
