<https://standards.iteh.ai/catalog/standards/sist/90766849-8d43-4502-9e83-8d48f214beb9/iso-15874-1-2013>

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

ISO 15874-1 was prepared by Technical Committee CEN/TC 155, *Plastics piping systems and ducting systems*, in collaboration with Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*, and Subcommittee SC 2, *Plastics pipes and fittings for water supplies*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 15874-1:2003 and ISO 15874-1:2003/Amd 1:2007), which has been technically revised. In 5.1, the material PP-RCT has been included.

ISO 15874 consists of the following parts<sup>1)</sup> under the general title *Plastics piping systems for hot and cold water installations — Polypropylene (PP)*:

- Part 1: General
- Part 2: Pipes
- Part 3: Fittings
- Part 5: Fitness for purpose of the system
- Part 7: Guidance for the assessment of conformity [Technical specification]

---

1) For ancillary equipment separate standards can apply. Guidance on installation of plastics piping systems made from different materials intended to be used for hot and cold water installations is given by CEN/TR 12108 [1].

## Introduction

This part of ISO 15874 specifies the requirements for a piping system and its components when made from polypropylene (PP). The piping system is intended to be used for hot and cold water installations.

Regarding potential undesirable effects on the quality of water intended for human consumption, caused by the product covered by ISO 15874

- no information is provided as to whether the product can be used without restriction, and
- existing national regulations concerning the use and/or the characteristics of this product remain in force.

Requirements and test methods for components of the piping system are specified in ISO 15874-2 and ISO 15874-3. Characteristics for fitness of purpose (mainly for joints) are covered in ISO 15874-5. ISO/TS 15874-7 gives guidance for the assessment of conformity.

This part of ISO 15874 specifies the general aspects of the plastics piping system.

At the date of publication of this part of ISO 15874, the following system International Standards for piping systems of other plastics materials used for the same application are

ISO 15875, Plastics piping systems for hot and cold water installations — Crosslinked polyethylene (PE-X)

ISO 15876, Plastics piping systems for hot and cold water installations — Polybutylene (PB)

ISO 15877, Plastics piping systems for hot and cold water installations — Chlorinated poly(vinyl chloride) (PVC-C)

ISO 22391, Plastics piping systems for hot and cold water installations - Polyethylene of raised temperature resistance (PE-RT)

The International Organization for Standardization (ISO) draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent.

ISO takes no position concerning the evidence, validity and scope of this patent right.

The holder of this patent right has assured ISO that they are willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of this patent right is registered with ISO. Information may be obtained from:

Borealis AG

Wagramerstrasse 17-19, A-1220,

Vienna, Austria

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. ISO shall not be held responsible for identifying any or all such patent rights.

ISO ([www.iso.org/patents](http://www.iso.org/patents)) and IEC (<http://patents.iec.ch>) maintain on-line databases of patents relevant to their standards. Users are encouraged to consult the databases for the most up to date information concerning patents.

[ISO 15874-1:2013](#)

<https://standards.iteh.ai/catalog/standards/sist/90766849-8d43-4502-9e83-8d48f214beb9/iso-15874-1-2013>

# Plastics piping systems for hot and cold water installations — Polypropylene (PP) —

## Part 1: General

### 1 Scope

This part of ISO 15874 specifies the general aspects of polypropylene (PP) piping systems intended to be used for hot and cold water installations within buildings for the conveyance of water whether or not intended for human consumption (domestic systems), and for heating systems, under design pressures and temperatures according to the class of application (see Table 1).

It covers a range of service conditions (classes of application), design pressures and pipe dimension classes. Values of  $T_D$ ,  $T_{max}$  and  $T_{mal}$  in excess of those in Table 1 of this part of ISO 15874 do not apply.

NOTE It is the responsibility of the purchaser or specifier to make the appropriate selections from these aspects, taking into account their particular requirements and any relevant national regulations and installation practices or codes.

It also specifies the test parameters for the test methods referred to in this part of ISO 15874.

In conjunction with the other parts of ISO 15874, this part of ISO 15874 is applicable to PP pipes, fittings, their joints and to joints with components of other plastics and non-plastics materials intended to be used for hot and cold water installations.

### 2 Normative references [9e83-8d48214beb9/iso-15874-1-2013](https://standards.iteh.ai/catalog/standards/sist/90766849-8d43-4502-9e83-8d48214beb9/iso-15874-1-2013)

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 15874-2:2013, *Plastics piping systems for hot and cold water installations — Polypropylene (PP) — Part 2: Pipes*

ISO 15874-3, *Plastics piping systems for hot and cold water installations — Polypropylene (PP) — Part 3: Fittings*

ISO 472, *Plastics — Vocabulary*

ISO 1043-1, *Plastics — Symbols and abbreviated terms — Part 1: Basic polymers and their special characteristics*

ISO 4065, *Thermoplastics pipes — Universal wall thickness table*

### 3 Terms and definitions, symbols and abbreviated terms

For the purposes of this document, the terms and definitions given in ISO 472, ISO 1043-1 and the following apply.

### 3.1 Terms and definitions

#### 3.1.1 Geometrical terms and definitions

##### 3.1.1.1

##### **nominal size**

**DN**  
numerical designation of the size of a component, which is a convenient round number, approximately equal to the manufacturing dimensions in millimetres (mm)

##### 3.1.1.2

##### **nominal size**

##### **DN/OD**

nominal size, related to outside diameter

##### 3.1.1.3

##### **nominal outside diameter**

$d_n$

specified diameter, in millimetres, assigned to a nominal size DN/OD

##### 3.1.1.4

##### **outside diameter (at any point)**

$d_e$

measured outside diameter through the cross-section at any point of a pipe or spigot end of a fitting, rounded up to the nearest 0,1 mm

##### 3.1.1.5

##### **mean outside diameter**

$d_{em}$

measured length of the outer circumference of a pipe or spigot end of a fitting in any cross section divided by  $\pi$  ( $\approx 3,142$ ) rounded up to the nearest 0,1 mm

##### 3.1.1.6

##### **minimum mean outside diameter**

$d_{em,min}$

minimum value of the mean outside diameter as specified for a given nominal size

##### 3.1.1.7

##### **maximum mean outside diameter**

$d_{em,max}$

maximum value of the mean outside diameter as specified for a given nominal size

##### 3.1.1.8

##### **mean inside diameter of socket**

$d_{sm}$

arithmetical mean of two measured inside diameters perpendicular to each other at the midpoint of the socket length

##### 3.1.1.9

##### **out-of-roundness**

##### **ovality**

difference between the measured maximum outside diameter and the measured minimum outside diameter in the same cross-sectional plane of a pipe or spigot end of a fitting, or the difference between the measured maximum inside diameter and the measured minimum inside diameter in the same cross-sectional plane of a socket

##### 3.1.1.10

##### **nominal wall thickness**

$e_n$

numerical designation of the wall thickness of a component, approximately equal to the manufacturing dimension in millimetres (mm)

iTeh STANDARD PREVIEW  
(standards.iteh.ai)

<https://standards.iteh.ai/catalog/standards/sist/90766849-8d43-4502-9e83-8d48f214beb9/iso-15874-1-2013>

**3.1.1.11****wall thickness (at any point)** $e$ 

measured wall thickness at any point around the circumference of a component, rounded up to the nearest 0,1 mm

**3.1.1.12****minimum wall thickness (at any point)** $e_{\min}$ 

minimum wall thickness at any point around the circumference of a component, as specified

**3.1.1.13****maximum wall thickness at any point** $e_{\max}$ 

maximum wall thickness at any point around the circumference of a component, as specified

**3.1.1.14****tolerance**

permitted variation of the specified value of a quantity, expressed as the difference between the permitted maximum and the permitted minimum value

**3.1.1.15****pipe series****S**

dimensionless number for pipe designation conforming to ISO 4065

Note 1 to entry: According to ISO 15874 the pipe series S is used as a means for selecting pipe sizes for practical purposes (see ISO 15874-2).

**3.1.1.16****calculated pipe value** $S_{\text{calc}}$ 

value for a specific pipe calculated according to the following equation, rounded up to the nearest 0,1 mm:

$$S_{\text{calc}} = \frac{d_n - e_n}{2e_n}$$

where:

$d_n$  is the nominal outside diameter, in millimetres;

$e_n$  is the nominal wall thickness, expressed in millimetres

**3.1.2 Terms and definitions related to service conditions****3.1.2.1****design pressure** $p_D$ 

highest pressure related to the circumstances for which the system has been designed and is intended to be used

Note 1 to entry: The design pressure ( $p_D$ ) is equal to the maximum design pressure (MDP), as specified in EN 806-1 [3].
