## Foreword

This European Telecommunication Standard (ETS) has been produced by the Special Mobile Group (SMG) of the European Telecommunications Standards Institute (ETSI).

This ETS defines the interface between the Subscriber Identity Module (SIM) and the Mobile Equipment (ME) for use during the network operation phase of GSM as well as those aspects of the internal organization of the SIM which are related to the network operation phase, within the digital cellular telecommunications system (Phase 2/Phase 2+).

This ETS is a GSM technical specification version 5 and is part of the 1996 release of the GSM Technical Specifications. The ETS from which this Phase 2+ ETS has evolved is Phase 2 GSM ETS 300 608 Edition 5 (GSM 11.11 version 4.18.2).

The specification from which this ETS has been derived was originally based on CEPT documentation, hence the presentation of this ETS may not be entirely in accordance with the ETSI/PNE Rules.

Transposition dates	
Date of adoption:	24 October 1997
Date of latest announcement of this ETS (doa):	31 January 1998
Date of latest publication of new National Standard or endorsement of this ETS (dop/e):	31 July 1998
Date of withdrawal of any conflicting National Standard (dow):	31 July 1998

## iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST ETS 300 977 E2:2003

<https://standards.iteh.ai/catalog/standards/sist/a61206d9-33fa-45f2-ac99-7ee8a1a8acf6/sist-ets-300-977-e2-2003>

## 1 Scope

This European Telecommunication Standard (ETS) defines the interface between the Subscriber Identity Module (SIM) and the Mobile Equipment (ME) for use during the network operation phase of GSM as well as those aspects of the internal organization of the SIM which are related to the network operation phase. This is to ensure interoperability between a SIM and an ME independently of the respective manufacturers and operators. The concept of a split of the Mobile Station (MS) into these elements as well as the distinction between the GSM network operation phase, which is also called GSM operations, and the administrative management phase are described in the GSM 02.17 [6].

This ETS defines:

- the requirements for the physical characteristics of the SIM, the electrical signals and the transmission protocols;
- the model which shall be used as a basis for the design of the logical structure of the SIM;
- the security features;
- the interface functions;
- the commands;
- the contents of the files required for the GSM application;
- the application protocol.

## iTeh STANDARD PREVIEW

Unless otherwise stated, references to GSM also apply to DCS 1 800.

## (standards.iteh.ai)

This ETS does not specify any aspects related to the administrative management phase. Any internal technical reallocation of either the SIM or the ME are only specified where these reflect over the interface.

SIST ETS 300 977 E2:2003

This ETS does not specify any of the security algorithms which may be used.

<https://standards.iteh.ai/catalog/standards/sist/a61206d9-33fa-45f2-ac99-7ee8a1a8acf6/sist-ets-300-977-e2-2003>

This ETS defines the SIM/ME interface for GSM Phase 2. While all attempts have been made to maintain phase compatibility, any issues that specifically relate to Phase 1 should be referenced from within the relevant Phase 1 specification.

## 2 Normative references

This European Telecommunication Standard (ETS) incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to, or revisions of, any of these publications apply to this ETS only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

### 3 Definitions, abbreviations and symbols

#### 3.1 Definitions

For the purposes of this ETS, the following definitions apply. For further information and definitions refer to GSM 01.02 [1].

**access conditions:** A set of security attributes associated with a file.

**application:** An application consists of a set of security mechanisms, files, data and protocols (excluding transmission protocols).

**application protocol:** The set of procedures required by the application.

**card session:** A link between the card and the external world starting with the ATR and ending with a subsequent reset or a deactivation of the card.

(standards.iteh.ai)

**current directory:** The latest MF or DF selected.

SIST ETS 300 977 E2:2003

**current EF:** The latest EF selected.  
<https://standards.iteh.ai/catalog/standards/sist/a61206d9-33fa-45f2-ac99-7ee8a1a8acf6/sist-ets-300-977-e2-2003>

**data field:** Obsolete term for Elementary File.

**Dedicated File (DF):** A file containing access conditions and, optionally, Elementary Files (EFs) or other Dedicated Files (DFs).

**directory:** General term for MF and DF.

**Elementary File (EF):** A file containing access conditions and data and no other files.

**file:** A directory or an organized set of bytes or records in the SIM.

**file identifier:** The 2 bytes which address a file in the SIM.

**GSM or DCS 1 800 application:** Set of security mechanisms, files, data and protocols required by GSM or DCS 1 800.

**GSM session:** That part of the card session dedicated to the GSM operation.

**IC card SIM:** Obsolete term for ID-1 SIM.

**ID-1 SIM:** The SIM having the format of an ID-1 card (see ISO 7816-1 [24]).

**Master File (MF):** The unique mandatory file containing access conditions and optionally DFs and/or EFs.

**normal GSM operation:** Relating to general, CHV related, GSM security related and subscription related procedures.

**padding:** One or more bits appended to a message in order to cause the message to contain the required number of bits or bytes.

**plug-in SIM:** A Second format of SIM (specified in clause 4).

**proactive SIM:** A SIM which is capable of issuing commands to the ME. Part of SIM Application Toolkit (see clause 11).

**record:** A string of bytes within an EF handled as a single entity (see clause 6).

**record number:** The number which identifies a record within an EF.

**record pointer:** The pointer which addresses one record in an EF.

**root directory:** Obsolete term for Master File.

**SIM application toolkit procedures:** Defined in GSM 11.14 [27].

### 3.2 Abbreviations

For the purposes of this ETS, the following abbreviations apply, in addition to those listed in GSM 01.04 [2]:

A3	Algorithm 3, authentication algorithm; used for authenticating the subscriber
A5	Algorithm 5, cipher algorithm; used for enciphering/deciphering data
A8	Algorithm 8, cipher key generator; used to generate $K_c$
A38	A single algorithm performing the functions of A3 and A8
ACM	Accumulated Call Meter
ADN	Abbreviated Dialling Number
ADM	Access condition to an EF which is under the control of the authority which creates this file
ALW	ALWays
AoC	Advice of Charge
APDU	Application Protocol Data Unit
ATR	Answer To Reset
BCCH	Broadcast Control Channel
BCD	Binary Coded Decimal
BDN	Barred Dialling Number
BTS	Base Transmitter Station
CB	Cell Broadcast
CBMI	Cell Broadcast Message Identifier
CCITT	The International Telegraph and Telephone Consultative Committee (now also known as the ITU Telecommunications Standardization sector)
CCP	Capability/Configuration Parameter
CHV	Card Holder Verification information; access condition used by the SIM for the verification of the identity of the user
CLA	CLAss
CNL	Co-operative Network List
DCK	De-personalization Control Keys
DCS	Digital Cellular System
DF	Dedicated File (abbreviation formerly used for Data Field)
DTMF	Dual Tone Multiple Frequency
ECC	Emergency Call Code
EF	Elementary File
ETSI	European Telecommunications Standards Institute
eMLPP	enhanced Multi-Level Precedence and Pre-emption Service
etu	elementary time unit
FDN	Fixed Dialling Number
GSM	Global System for Mobile communications
HPLMN	Home PLMN
IC	Integrated Circuit
ICC	Integrated Circuit(s) Card
ID	IDentifier
IEC	International Electrotechnical Commission

IMSI	International Mobile Subscriber Identity
ISO	International Organization for Standardization
Kc	Cryptographic key; used by the cipher A5
Ki	Subscriber authentication key; the cryptographic key used by the authentication algorithm, A3, and cipher key generator, A8
LAI	Location Area Information; information indicating a cell or a set of cells
lghth	The (specific) length of a data unit
LND	Last Number Dialled
LSB	Least Significant Bit
MCC	Mobile Country Code
ME	Mobile Equipment
MF	Master File
MMI	Man Machine Interface
MNC	Mobile Network Code
MS	Mobile Station
MSISDN	Mobile Station international ISDN number
MSB	Most Significant Bit
NET	NETwork
NEV	NEVer
NPI	Numbering Plan Identifier
PIN/PIN2	Personal Identification Number / Personal Identification Number 2 (obsolete terms for CHV1 and CHV2, respectively)
PLMN	Public Land Mobile Network
PTS	Protocol Type Select (response to the ATR)
PUK/PUK2	PIN Unblocking Key / PIN2 Unblocking Key (obsolete terms for UNBLOCK CHV1 and UNBLOCK CHV2, respectively)
RAND	A RANDom challenge issued by the network
RFU	Reserved for Future Use
SDN	Service Dialling Number
SIM	Subscriber Identity Module
SMS	Short Message Service
SRES	Signed REsponse calculated by a SIM
SSC	Supplementary Service Control string
SW1/SW2	Status Word 1 / Status Word 2
TMSI	Temporary Mobile Subscriber Identity
TON	Type Of Number
TP	Transfer layer Protocol
TPDU	Transfer Protocol Data Unit
TS	Technical Specification
UNBLOCK CHV1/2	value to unblock CHV1/CHV2
VBS	Voice Broadcast Service
VGCS	Voice Group Call Service
VPLMN	Visited PLMN

## iTel STANDARD PREVIEW Standards.iteh.ai)

SIST ETS 300 977 E2:2003

### 3.3 Symbols

Vcc	Supply voltage
Vpp	Programming voltage
'0' to '9' and 'A' to 'F'	The sixteen hexadecimal digits

## 4 Physical characteristics

Two physical types of SIM are specified. These are the "ID-1 SIM" and the "Plug-in SIM".

The physical characteristics of both types of SIM shall be in accordance with ISO 7816-1, 2 [24, 25] unless otherwise specified. The following additional requirements shall be applied to ensure proper operation in the GSM environment.

### 4.1 Format and layout

The information on the exterior of either SIM should include at least the individual account identifier and the check digit of the IC Card Identification (see clause 10, EF<sub>ICCID</sub>).
