

DRAFT INTERNATIONAL STANDARD ISO/DIS 13579-4

ISO/TC 244

Secretariat: JISC

Voting begins on
2011-04-20

Voting terminates on
2011-09-20

INTERNATIONAL ORGANIZATION FOR STANDARDIZATION • МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ ПО СТАНДАРТИЗАЦИИ • ORGANISATION INTERNATIONALE DE NORMALISATION

Industrial furnaces and associated processing equipment — Method of measuring energy balance and calculating efficiency —

Part 4: Furnaces with protective or reactive atmosphere

Fours industriels et équipements associés — Méthode de mesure du bilan énergétique et de calcul de l'efficacité —

Partie 4: Fours à atmosphère contrôlée ou active

ICS 25.180.01

To expedite distribution, this document is circulated as received from the committee secretariat. ISO Central Secretariat work of editing and text composition will be undertaken at publication stage.

Pour accélérer la distribution, le présent document est distribué tel qu'il est parvenu du secrétariat du comité. Le travail de rédaction et de composition de texte sera effectué au Secrétariat central de l'ISO au stade de publication.

THIS DOCUMENT IS A DRAFT CIRCULATED FOR COMMENT AND APPROVAL. IT IS THEREFORE SUBJECT TO CHANGE AND MAY NOT BE REFERRED TO AS AN INTERNATIONAL STANDARD UNTIL PUBLISHED AS SUCH.

IN ADDITION TO THEIR EVALUATION AS BEING ACCEPTABLE FOR INDUSTRIAL, TECHNOLOGICAL, COMMERCIAL AND USER PURPOSES, DRAFT INTERNATIONAL STANDARDS MAY ON OCCASION HAVE TO BE CONSIDERED IN THE LIGHT OF THEIR POTENTIAL TO BECOME STANDARDS TO WHICH REFERENCE MAY BE MADE IN NATIONAL REGULATIONS.

RECIPIENTS OF THIS DRAFT ARE INVITED TO SUBMIT, WITH THEIR COMMENTS, NOTIFICATION OF ANY RELEVANT PATENT RIGHTS OF WHICH THEY ARE AWARE AND TO PROVIDE SUPPORTING DOCUMENTATION.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 13579-4 was prepared by Technical Committee ISO/TC 244, *Industrial furnaces and associated thermal processing equipment*.

ISO 13579 consists of the following parts, under the general title *Industrial furnaces and associated processing equipment — Method of measuring energy balance and calculating efficiency*:

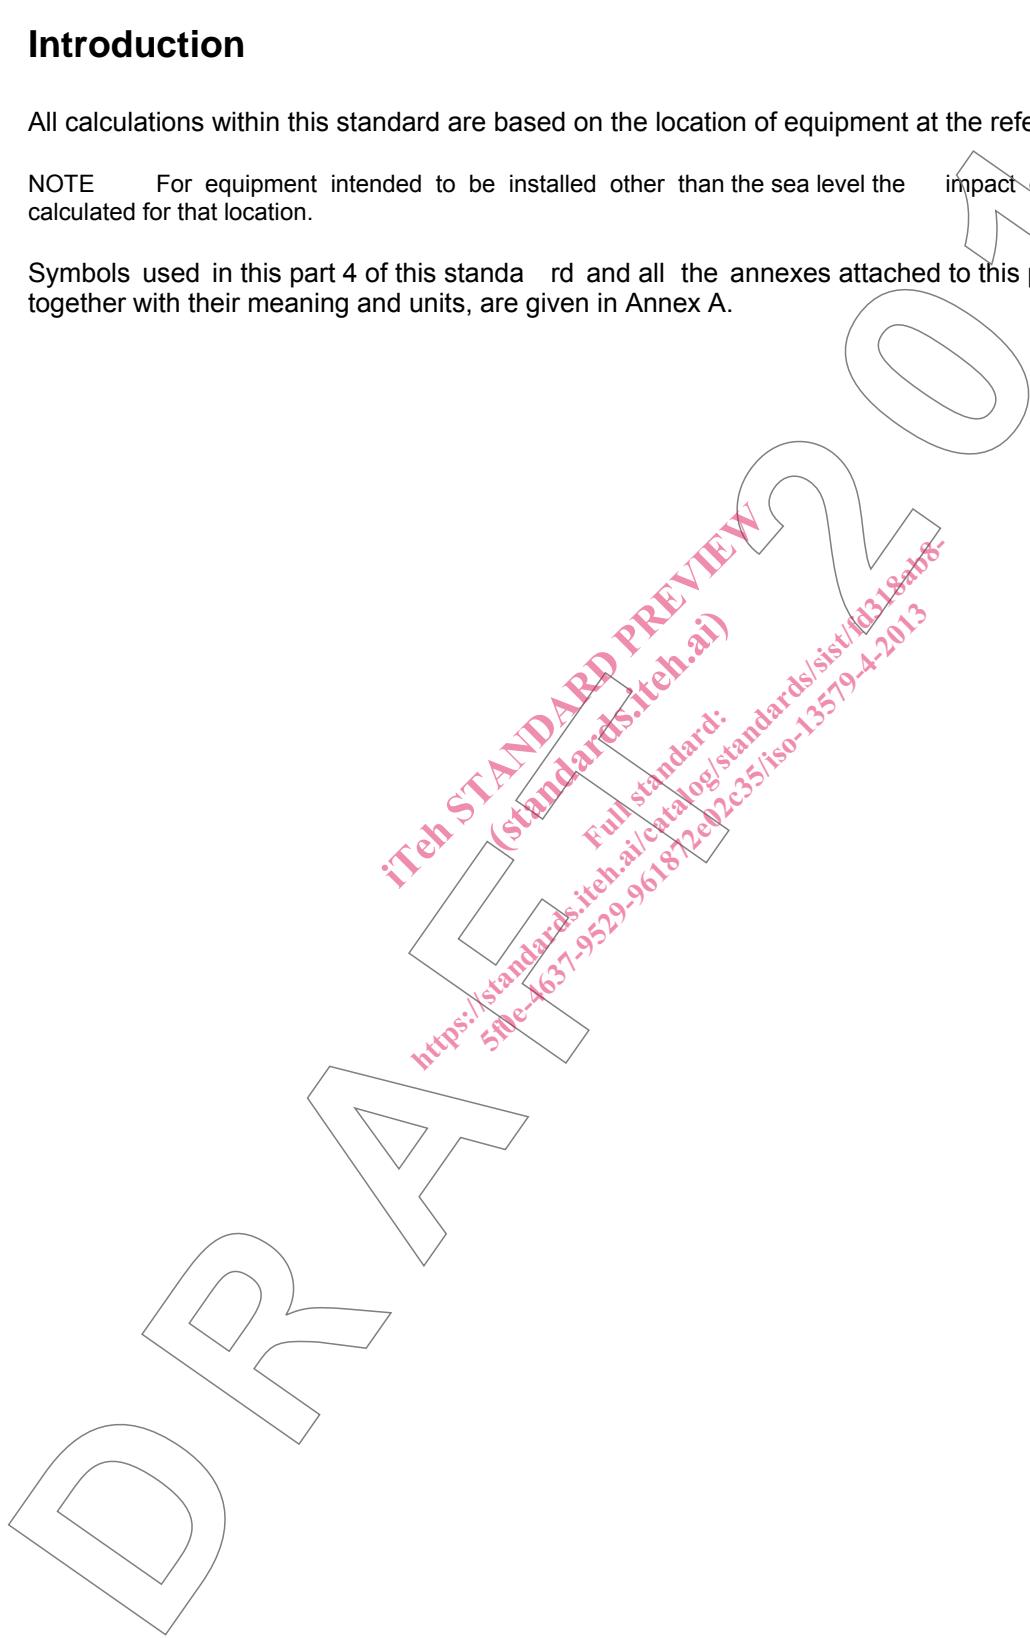

- *Part 1: General methodology*
- *Part 2: Reheating furnaces for steel*
- *Part 3: Batch type aluminium melting furnaces*
- *Part 4: Furnaces with protective or reactive atmosphere*

Introduction

All calculations within this standard are based on the location of equipment at the reference conditions.

NOTE For equipment intended to be installed other than the sea level the impact of the elevation should be calculated for that location.

Symbols used in this part 4 of this standard and all the annexes attached to this part 4 of this standard, together with their meaning and units, are given in Annex A.

iTeh STANDARD PREVIEW
(Standards.iteh.ai)

Full standard:
<https://standards.iteh.ai/catalog/standards/sist/fd318ab8-50e-4637-9529-961872e02c35/iso-13579-4-2013>

Industrial furnaces and associated processing equipment — Method of measuring energy balance and calculating efficiency —

Part 4: Furnaces with protective or reactive atmosphere

5 1 Scope

- 6 This Part 4 of ISO 13579 specifies general methodology of measuring energy balance and calculating
7 efficiency of the process involving furnaces with protective or reactive atmosphere as designed by the furnace
8 manufacturers. This general methodology includes:
- 9 Measurement methods,
10 Calculations (general calculation) and
11 Evaluation report.
- 12 This standard is excluding any efficiencies related to the process itself outside of the furnaces with protective
13 or reactive atmosphere.

14 2 Normative references

- 15 The following referenced documents are indispensable for the application of this document. For dated
16 references, only the edition cited applies. For undated references, the latest edition of the referenced
17 document (including any amendments) applies.
- 18 ISO 13574, Industrial furnaces and associated thermal processing equipment — Vocabulary
19 ISO 13579-1, Industrial furnaces and associated thermal processing equipment — Method of measuring
20 energy balance and calculating efficiency — Part 1: General methodology

21 3 Terms and definitions

- 22 The terms and definitions used in this part of Standard is defined in ISO 13574, Industrial furnaces and
23 associated thermal processing equipment — Vocabulary.

24 4 Basic principles

25 4.1 General

- 26 Area of energy balance measurement shall be determined.

- 27 NOTE An example of determination of the area of energy balance measurement of furnaces with protective or
28 reactive atmosphere are shown in Figure 1 and Figure 2.

29 The following aspects shall be included in the energy balance measurement:

30 a) Energy input;

31 — "Fuel equivalent energy" as specified in 4.2.2;

32 — "Other energy input" as specified in 4.2.3;

33 b) Energy output;

34 — "Thermal energy output" as specified in 6.2.5;

35 — "Energy used in electrical auxiliary equipment" as specified in 6.2.6;

36 — "Energy for generation of utilities" as specified in 6.2.7;

37 — "Electrical generation loss" as specified in 6.2.8.

38 Determine energy input and energy output which goes into and comes out of the area of energy balance based on the measurement data.

40 The total energy input into the area shall balance the total energy output from the area.

41 Result of energy balance measurement is required to be summarized into energy input and energy output in an energy balance sheet with necessary information such as equipment summary, measurement condition and measurement data.

44 Thermal energy balance and electrical generation may be created as subcategories. See 6.3 and 6.4.

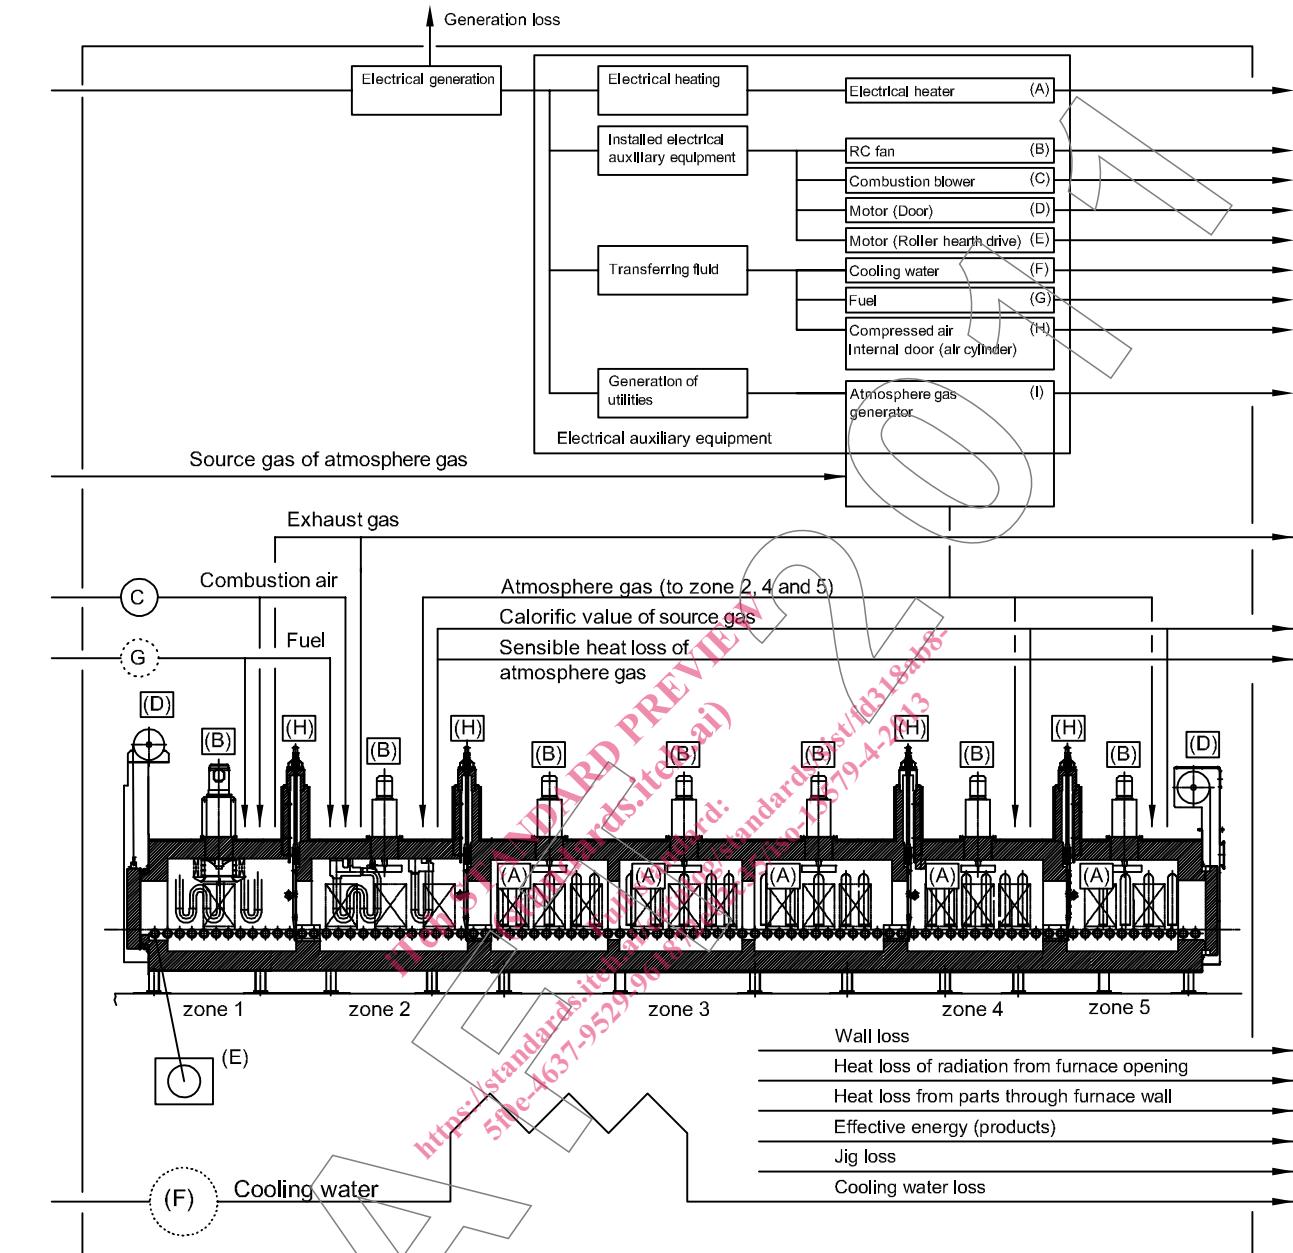

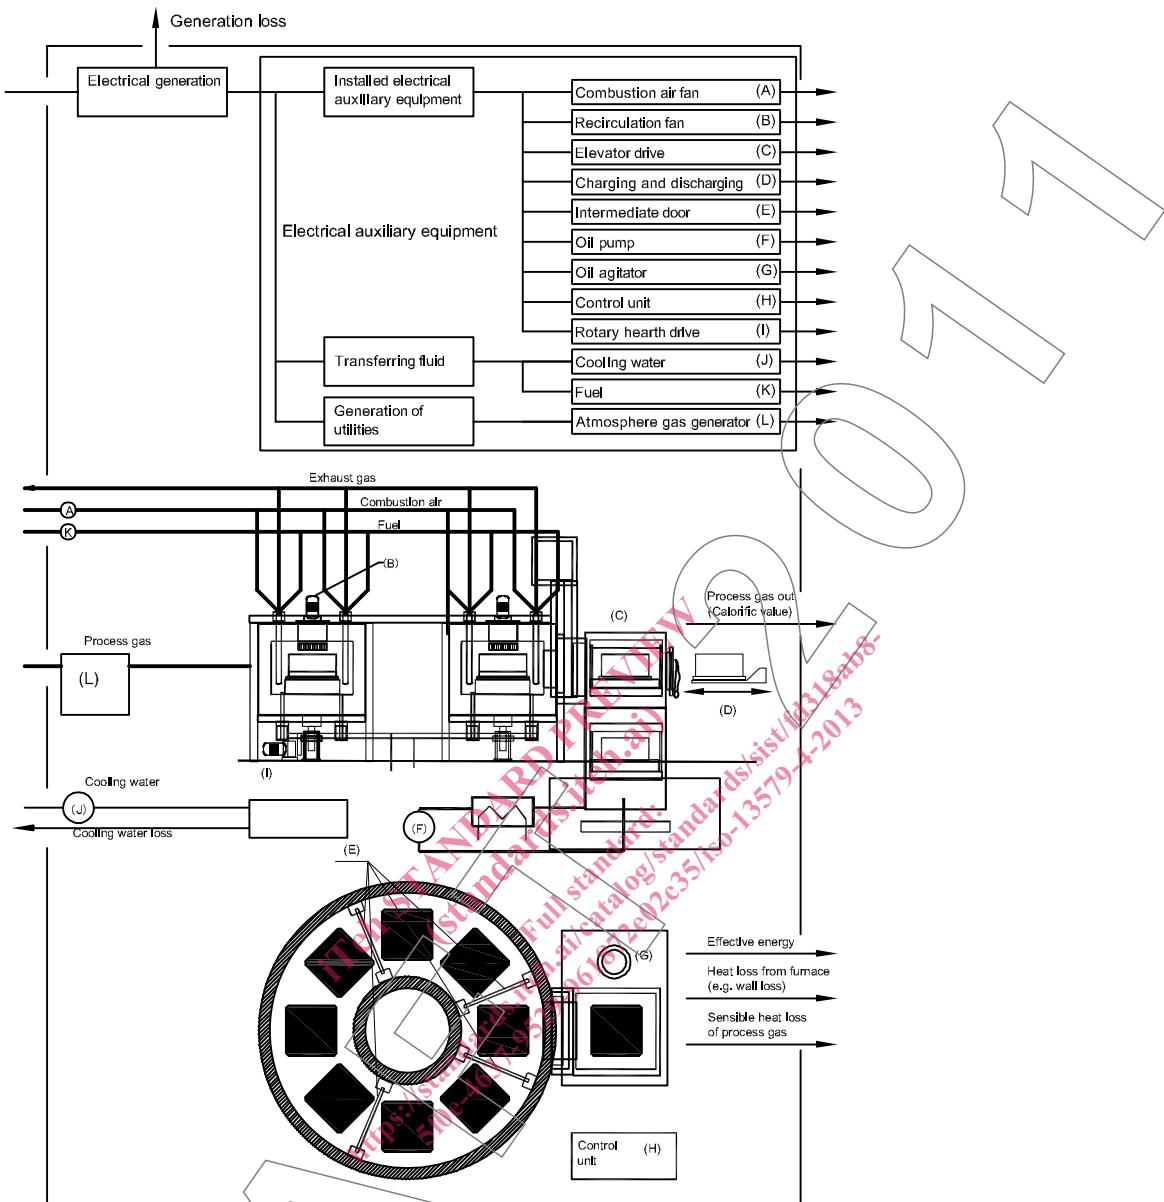

Figure 1 — Example of determination of the area of energy balance
Continuous carburizing furnace

**Figure 2 — Example of determination of the area of energy balance
Rotary hearth furnace**

4.2 Sankey diagram

As specified in ISO/CD 13579-1 4.2.

4.3 Process Heating Assessment Survey Tool (PHAST)

As specified in ISO/CD 13579-1 4.3.

5 Basic condition of measurement and calculation

5.1 State of furnace

As specified in ISO/CD 13579-1 5.1.

5.2 Duration of measurement

As specified in ISO/CD 13579-1 5.2.

5.3 Unit of specific energy intensity

As specified in ISO/CD 13579-1 5.3.

5.4 Reference condition

As specified in ISO/CD 13579-1 5.4.

5.5 Unit of volume

As specified in ISO/CD 13579-1 5.5.

5.6 Fuel

As specified in ISO/CD 13579-1 5.6.

6 Type of energy used in this standard

6.1 General

Energy evaluated in this standard and their symbols are specified in this clause.

All energy shall be expressed in kJ/t products unless otherwise specified.

NOTE The types of energy specified in this clause are summarized in the Table 1.

6.2 Energy balance

6.2.1 Total energy input

6.2.1.1

Total energy input E_{input}

As specified in ISO/CD 13579-1 6.2.1.1.

6.2.2 Fuel equivalent energy

6.2.2.1

Fuel equivalent energy E_{fe}

As specified in ISO/CD 13579-1 6.2.2.1.
