Digital cellular telecommunications system (Phase 2+) (GSM);
Universal Mobile Telecommunications System (UMTS);
LTE;
5G;
AT command set for User Equipment (UE)
(3GPP TS 27.007 version 15.2.0 Release 15)
Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

3GPP TS 27.007 version 15.2.0 Release 15

ETSI TS 127 007 V15.2.0 (2018-06)
8.68 Availability for voice calls with IMS +CAVIMS

8.67 Emergency numbers +CEN

8.66 Set card slot +CSUS

8.65 Remaining PIN retries +CPINR

8.63 IMS single radio voice call continuity +CISRVCC

8.62 Printing IP address format +CGPIAF

8.58 Mobile terminated location request disclosure allowance +CMTLRA

8.57 Mobile terminated location request notification +CMTLR

8.55 Positioning control +CPOS

8.54A Command display screen boundary +CDSB

8.54 Command screen size +CSS

8.53 Command screen orientation +CSO

8.52 Command touch screen action +CTSA

8.47 EAP authentication +CEAP

8.46 Close logical channel +CCHC

8.43 Generic UICC logical channel access +CGLA

8.42 Enter protocol mode +CPROT

8.40 Automatic time zone update +CTZU

8.39 Postpone or dismiss an alarm +CAPD

8.38 Delete alarm +CALD

8.37 List all available AT commands +CLAC

8.36 Master reset +CMAR

8.35 Ring melody playback +CRMP

8.34 Ring melody control +CRMC

8.33 Set voice mail number +CSVM

8.32 Set greeting text +CSGT

8.31 Language event +CLAE

8.30 Set language +CLAN

8.29 Power class +CPWC

8.28 Call meter maximum event +CCWE

8.27 Price per unit and currency table +CPUC

8.25 Accumulated call meter +ACAM

8.24 Command screen size +CSS

8.23 Loudspeaker volume level +CLVL

8.22 Vibrator mode +CVIB

8.21 Ringer sound level +CRSL

8.20 Alert sound mode +CALM

8.19 Secure control command +CSCC

8.18 Restricted SIM access +CRSM

8.17 Generic SIM access +CSIM

8.15 Clock +CCLK

8.14 Write phone book entry +CPBW

8.13 Find phonebook entries +CPBF

8.12 Read phonebook entries +CPBR

8.11 Select phonebook memory storage +CPBS

8.10 Mobile termination event reporting +CMER

8.9 Indicator control +CIND

8.8 Display control +CDIS
8.69 Extended signal quality +CESQ
8.70 Primary notification event reporting +CPNER
8.71 IMS registration information +CIREG
8.72 Availability for SMS using IMS +CASIMS
8.73 Monitor of current calls +CMCCS
8.74 List of current calls +CLCCS
8.75 Supported radio accesses +CSRA
8.76 Circuit switched fallback +CCSF
8.77 Reading coverage enhancement status +CRCES
8.78 Application level measurement configuration +CAPPLEVMC
8.79 Application level measurement report +CAPPLEVMR
8.80 Informative examples
9 Mobile termination errors
9.1 Report mobile termination error +CMEE
9.1A Report mobile originated location request error +CMOLRE
9.1B Report network error codes +CNEC
9.2 Mobile termination error result code +CME ERROR
9.2.0 General
9.2.1 General errors
9.2.2 CS, GPRS, EPS and 5GS-related errors
9.2.2.1 Errors related to a failure to perform an attach
9.2.2.1.1 Errors for CS and GPRS
9.2.2.1.2 Errors for EPS
9.2.2.1.3 Errors for 5GS
9.2.2.2 Errors related to a failure to activate a context
9.2.2.2.1 Errors for GPRS
9.2.2.2.2 Errors for EPS
9.2.2.2.3 Errors for 5GS
9.2.2.3 Void
9.2.3 VBS, VGCS and eMLPP-related errors
9.3 Mobile termination error result code +CMOLRE
9.3.1 General
9.3.2 Errors
9.4 Informative examples
10 Commands for packet domain
10.0 General
10.1 Commands specific to MTs supporting the packet domain
10.1.0 General remark about EPS bearer contexts and PDP contexts
10.1.1 Define PDP context +CGDCONT
10.1.2 Define secondary PDP context +CGDSCONT
10.1.3 Traffic flow template +CGTFT
10.1.4 Quality of service profile (requested) +CGQREQ
10.1.5 Quality of service profile (minimum acceptable) +CGQMIN
10.1.6 3G quality of service profile (requested) +CGEQREQ
10.1.7 3G quality of service profile (minimum acceptable) +CGEQMIN
10.1.8 3G quality of service profile (negotiated) +CGEQNEG
10.1.9 PS attach or detach +CGATT
10.1.10 PDP context activate or deactivate +CGACT
10.1.11 PDP context modify +CGCMOD
10.1.12 Enter data state +CGDATA
10.1.13 Configure local octet stream PAD parameters +CGCLOSP (Obsolete)
10.1.14 Show PDP address(es) +CGPADDR
10.1.15 Automatic response to a network request for PDP context activation +CGAUTO
10.1.16 Manual response to a network request for PDP context activation +CGANS
10.1.17 GPRS mobile station class +CGCLASS
10.1.18 Configure local triple-X PAD parameters +CGCLPAD (GPRS only) (Obsolete)
10.1.19 Packet domain event reporting +CGREP
10.1.20 GPRS network registration status +CGREG
10.1.21 Select service for MO SMS messages +CGSMS
11.1.22 EPS network registration status +CEREG ................................................................. 265
11.1.23 PDP context read dynamic parameters +CGCONTRDP ........................................... 266
11.1.24 Secondary PDP context read dynamic parameters +CGSCONTRDP ......................... 271
11.1.25 Traffic flow template read dynamic parameters +CGTFTRDP ................................. 272
11.1.26 Define EPS quality of service +CGEQOS ................................................................. 274
11.1.27 EPS quality of service read dynamic parameters +CGEQOSRDP .............................. 275
11.1.28 UE modes of operation for EPS +CEMODE ............................................................ 276
11.1.29 Delete non-active PDP contexts +CGDEL ............................................................... 277
11.1.30 Signalling connection status +CSCON ................................................................. 278
11.1.31 Define PDP context authentication parameters +CGAUTH ......................................... 279
11.1.32 Initial PDP context activation +CIPCA ..................................................................... 280
11.1.33 No more PS data +CNMPSD ..................................................................................... 281
11.1.34 UE's usage setting for EPS and 5GS +CEUS .............................................................. 282
11.1.35 UE's voice domain preference E-UTRAN +CEVDP .................................................. 282
11.1.36 UE's voice domain preference UTRAN +CVDP ....................................................... 283
11.1.37 UE's mobility management IMS voice termination +CMMIVT .................................. 283
11.1.38 Power preference indication for EPS +CEPPI ......................................................... 284
11.1.39 WLAN offload assistance data +CWLANOLAD .................................................... 284
11.1.40 WLAN offload cell measurement +CWLANOLCM ............................................. 287
11.1.41 APN back-off timer status reporting +CABTSR ......................................................... 288
11.1.42 APN back-off timer read dynamic parameters +CABTRDP ....................................... 289
11.1.43 Sending of originating data via the control plane +COSOCP ...................................... 290
11.1.44 Reporting of terminating data via the control plane +CRTOSCP .............................. 291
11.1.45 APN rate control +CGAPR ...................................................................................... 292
11.1.46 PS data off status +CFSDO ...................................................................................... 293
11.1.47 5GS network registration status +CSGREG ........................................................... 294
11.1.48 Bandwidth preference indication +CBPI ..................................................................... 296
11.1.49 Define 5GS quality of service +CG5QOS ................................................................. 297
11.1.50 5GS quality of service read dynamic parameters +CG5QOSRDP .............................. 298
10.2.2.0 General ................................................................. 292
10.2.2.1 Automatic response to a network request for PDP context activation 'S0' ................. 302
10.2.2.2 Manual acceptance of a network request for PDP context activation 'A' .................. 302
10.2.2.3 Manual rejection of a network request for PDP context activation 'H' ...................... 302
11.2 Commands specific to MTs supporting the VGCS and VBS ........................................... 303
11.2.1 General .................................................................................................................... 303
11.2.2 Accept an incoming voice group or voice broadcast call +CAJOIN ............................ 303
11.2.3 Reject an incoming voice group or voice broadcast call +CAREJ ............................... 303
11.2.4 Leave an ongoing voice group or voice broadcast call +CAHLD ............................... 304
11.2.5 Talker access for voice group call +CAPTT .............................................................. 304
11.2.6 Voice group call uplink status presentation +CAULEV ............................................ 305
11.2.7 List current voice group and voice broadcast calls +CALCC ..................................... 306
11.2.8 Voice group or voice broadcast call state attribute presentation +CACSP .................. 307
11.2.9 Group Id prefixes capability +CGIPC ...................................................................... 310
11.2.10 modem compatibility commands ............................................................................ 311
11.4.1 Request VGC5S or VBS service 'D' ...................................................................... 311
11.4.2 Termination of an voice group or voice broadcast call 'H' ......................................... 312
11.4.3 VGC5S subscriptions and Gld status +CGCS ......................................................... 312
11.4.4 VBS subscriptions and Gld status +CBCS ............................................................... 313
11.4.5 Informative examples .............................................................................................. 313
12 Commands for USIM application toolkit ........................................................................ 313
  12.1 General ................................................................................................................... 313
  12.2 Commands specific to MTs supporting USAT .......................................................... 314
    12.2.1 Read USAT profile +CUSATR ........................................................................... 314
    12.2.2 Write USAT profile +CUSATW ......................................................................... 315
    12.2.3 Profile download upon start-up +CUSATD ....................................................... 316
    12.2.4 Activate USAT profile +CUSATA ................................................................. 317
    12.2.5 Send USAT terminal response +CUSATT ....................................................... 318
    12.2.6 Send USAT envelope command +CUSATE ..................................................... 319
  12.3 Informative examples .............................................................................................. 320

13 Commands for enhanced support of dialling ............................................................... 321
  13.1 General ................................................................................................................... 321
  13.2 Commands for dialling .......................................................................................... 322
    13.2.1 Dial URI +CDU ............................................................................................... 322
    13.2.2 Dial URI from phonebook +CDUP ................................................................... 324
    13.2.3 Hangup of current calls +CHCCS ..................................................................... 325
    13.2.4 Define media profile +CDEFMP ....................................................................... 326
    13.2.5 Control and modify media description +CCMMD ............................................. 328
  13.3 Informative examples .............................................................................................. 329

14 Commands for eMBMS configuration ........................................................................ 333
  14.1 General ................................................................................................................... 333
  14.2 Commands specific to eMBMS .............................................................................. 334
    14.2.1 eMBMS configuration in MT +CEMBMSCFG ................................................. 334
    14.2.2 eMBMS status reporting in MT +CEMBMSR .................................................. 334
    14.2.3 eMBMS service configuration +CEMBMSSRV .............................................. 335
    14.2.4 Enter eMBMS data state +CEMBMSDATA .................................................... 336
    14.2.5 eMBMS counting procedure +CEMBMSCNT ............................................... 337
    14.2.6 eMBMS Service Area Identities +CEMBMSSAI ............................................. 337

15 Commands for UE test functions .............................................................................. 338
  15.1 General ................................................................................................................... 338
  15.2 Activate test mode +CATM ................................................................................... 339
  15.3 Close UE test loop mode E +CUTLE .................................................................... 339
  15.4 UE sidelink packet counter request +CUSPCREQ .............................................. 341
  15.5 UTC time reset +CUTCRT .................................................................................... 342

Annex A (normative): Summary of commands from other standards ............................... 343

Annex B (normative): Summary of result codes .............................................................. 345

Annex C (informative): Commands from TIA IS-101 ..................................................... 348
  C.1 Introduction ............................................................................................................ 348
  C.2 Commands ............................................................................................................ 349
    C.2.1 Select mode +FCLASS ..................................................................................... 349
    C.2.2 Buffer threshold setting +VBT ......................................................................... 349
    C.2.3 Calling number ID presentation +VCID ......................................................... 350
    C.2.4 Receive gain selection +VGR ......................................................................... 350
    C.2.5 Transmit gain selection +VGT ......................................................................... 350
    C.2.6 Initialise voice parameters +VIP ..................................................................... 351
    C.2.7 Inactivity timer +VIT ..................................................................................... 351
    C.2.8 Line selection +VLS ..................................................................................... 351

Annex H (informative): Change history ..............................................................................................359
History....................................................................................................................................................367
Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x  the first digit:
   1  presented to TSG for information;
   2  presented to TSG for approval;
   3 or greater indicates TSG approved document under change control.

y  the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z  the third digit is incremented when editorial only changes have been incorporated in the document.
1 Scope

The present document specifies a profile of AT commands and recommends that this profile be used for controlling Mobile Termination (MT) functions and network services from a Terminal Equipment (TE) through Terminal Adaptor (TA). The command prefix +C is reserved for Digital Cellular in ITU-T Recommendation V.250 [14]. The present document has also the syntax details used to construct extended commands. Commands from ITU-T Recommendation V.250 [14] and existing digital cellular standards (TIA IS-99 [15] and TIA IS-135 [16]) are used whenever applicable. Some of the new commands are defined such way that they can be easily applied to MT of other networks.

NOTE: The terms GSM and GSM/UMTS are used whenever appropriate for SIM/UICC GSM applications or GSM/UMTS bearer services or to represent specific mobile accesses covered by the present specification.

ITU-T Recommendation T.31 [11] and ITU-T Recommendation T.32 [12] fax AT commands may be used for GSM/UMTS fax transmission from TE. Short Message Service AT commands are defined in 3GPP TS 27.005 [24]. AT commands for packet systems are defined in clause 10 of this specification. The present document assumes an abstract architecture comprising a TE (e.g. a computer) and a MT interfaced by a TA (see figure 1). The span of control of the defined commands should allow handling of any physical implementation that this abstract architecture may lead to:

- TA, MT and TE as three separate entities;
- TA integrated under the MT cover, and the TE implemented as a separate entity;
- TA integrated under the TE cover, and the MT implemented as a separate entity; and
- TA and MT integrated under the TE cover as a single entity.

The commands described in the present document may be observed on the link between the TE and the TA. However, most of the commands retrieve information about the MT, not about the TA.

Figure 1: Setup

Interface between TE and TA is intended to operate over existing serial (ITU-T Recommendation V.24) cables, infrared link, and all link types with similar behaviour. For correct operation many of the defined commands require eight bit data and therefore it is recommended that TE-TA link is set to eight bits/byte mode. (For infrared operation implementation, refer informative references IrDA. For embedding AT commands and data during on-line data state, refer TIA-617/ITU-T V.80.) Interface between TA and MT is dependent on the interface in the MT.

The functional blocks shown in figure 1, using AT commands, shall follow the principles described in the interactions handling framework 3GPP TS 23.227 [63].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.
