## Draft ETSI EN 302 065-3-1 V3.1.1 (2024-07)

Short Range Devices (SRD)
using Ultra Wide Band technology (UWB);
Harmonised standard for access to radio spectrum;
Part 3: UWB devices installed in motor and railway vehicles;
Sub-part 1: Requirements for UWB devices for vehicular
access systems within 3,8 GHz to 4,2 GHz or 6 GHz to 8,5 GHz

# Reference REN/ERM-TGUWB-150-3-1 Keywords harmonised standard, SRD, UWB

## Intellectual Property Rights

#### **Essential patents**

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

#### **Trademarks**

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT**<sup>TM</sup>, **PLUGTESTS**<sup>TM</sup>, **UMTS**<sup>TM</sup> and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP**<sup>TM</sup> and **LTE**<sup>TM</sup> are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M**<sup>TM</sup> logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**<sup>®</sup> and the GSM logo are trademarks registered and owned by the GSM Association.

**BLUETOOTH®** is a trademark registered and owned by Bluetooth SIG, Inc.

## **Foreword**

This draft Harmonised European Standard (EN) has been produced by ETSI Technical Committee Electromagnetic compatibility and Radio spectrum Matters (ERM), and is now submitted for the combined Public Enquiry and Vote phase of the ETSI Standardisation Request deliverable Approval Procedure.

The present document has been prepared under the Commission's standardisation request C(2015) 5376 final [i.2] to provide one voluntary means of conforming to the essential requirements of Directive 2014/53/EU on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC [i.1].

Once the present document is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of the present document given in Table A.1 confers, within the limits of the scope of the present document, a presumption of conformity with the corresponding essential requirements of that Directive and associated EFTA regulations.

The present document is part 3, sub-part 1 of a multi-part deliverable covering Short Range Devices (SRD) using Ultra Wide Band technology (UWB); Harmonised standard for access to radio spectrum, as identified below:

Part 1: "Generic UWB devices":

Sub-part 1: "Communication devices within 3,1 GHz to 4,8 GHz using LDC mitigation or within the 6 GHz to 8.5 GHz".

Part 2: "Ultra Wide Band location tracking devices":

Sub-part 1: "Requirements for devices within 6 GHz to 8,5 GHz";

Sub-part 2: "Requirements for devices in the frequency band between 3,1 GHz to 4,8 GHz utilizing LDC mitigation technique";

- Sub-part 3: "Requirements for fixed infrastructure UWB based localization systems in the frequency band between 3,1 GHz to 4,8 GHz deploying Detect-And-Avoid (DAA) mitigation technique";
- Sub-part 4: "Requirements for fixed outdoor devices within 6,0 GHz to 8,5 GHz";
- Sub-part 5: "Requirements for enhanced indoor devices within 6,0 GHz to 8,5 GHz".

#### Part 3: "UWB devices installed in motor and railway vehicles":

- Sub-part 1: "Requirements for UWB devices for vehicular access systems within 3,8 GHz to 4,2 GHz or 6 GHz to 8,5 GHz";
- Sub-part 2: "Requirements for location tracking devices installed in rail and road vehicles operating in the frequency range of 3,1 GHz to 4,8 GHz or 6,0 GHz to 8,5 GHz";
- Sub-part 3: "Requirements for UWB radiodetermination applications operating within 6,0 GHz to 8,5 GHz".
- Part 4: "Material Sensing devices":
  - Sub-part 1: "Building material analysis below 10,6 GHz";
  - Sub-part 2: "UWB Material Sensing devices for Security Scanning";
  - Sub-part 3: "Ground humidity and condition sensor below 10,6 GHz";
  - Sub-part 4: "Exterior material sensing applications for ground based vehicles below 10,6 GHz";
  - Sub-part 5: "UWB surveillance devices for parking lot sensors below 10,6 GHz".
- Part 5: "Devices using UWB technology onboard aircraft";
- Part 6: "Ultra Wide Band radio-determination for radar sensing devices":
  - Sub-part 1: "Requirements for presence detection applications within 6,0 GHz to 8,5 GHz";
  - Sub-part 2: "Requirements for generic UWB through-air non-contact vital signs applications within 6,0 GHz to 8,5 GHz";
  - Sub-part 3: "Requirements for fixed outdoor presence detection devices within 6,0 GHz to 8,5 GHz";
  - Sub-part 4: "Requirements for fixed outdoor through-air non-contact vital signs applications within 6,0 GHz to 8,5 GHz";
  - Sub-part 5: "Requirements for enhanced indoor presence detection devices within 6,0 GHz to 8,5 GHz";
  - Sub-part 6: "Requirements for enhanced indoor through-air non-contact vital signs applications within 6,0 GHz to 8,5 GHz".
- NOTE: Part 4, sub-parts 2 (UWB Material Sensing devices for Security Scanning), 3 (Ground humidity and condition sensor below 10,6 GHz) and 5 (UWB surveillance devices for parking lot sensors below 10,6 GHz) of this multi-part deliverable are under discussion (change WI) or will be stopped.

Proposed national transposition dates				
Date of latest announcement of this EN (doa):	3 months after ETSI publication			
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	6 months after doa			
Date of withdrawal of any conflicting National Standard (dow):	18 months after doa			

## Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

## Introduction

For the case of the present document, the applicable harmonised standard has been ETSI EN 302 065-3 [i.12], for UWB devices for ground based vehicular applications, which was published in the OJEU without restriction at 10 March 2017 [i.9] and then published at 5 February 2020 [i.10] with the following restriction:

• "This harmonised standard does not set out technical specifications for 'trigger before-transmit techniques'. Implementing Decision (EU) 2019/785, however, imposes, as of 16 November 2019, technical requirements to be used within the bands 3,8-4.2 GHz and 6-8,5 GHz for vehicular access systems using trigger-before transmit. Therefore compliance with this harmonised standard does not ensure compliance with Decision (EU) 2019/785 and accordingly does not confer a presumption of conformity with those essential requirements set out in Article 3 (2) of Directive 2014/53/EU which relate to 'trigger-before-transmit techniques'".

In order to consider the above points, ETSI ERM TGUWB decided to develop more specific standards; for the present document this means instead of a generic ETSI EN 302 065-3 [i.12] standard for all road and rail vehicles applications, an ETSI EN 302 065-3-1 for UWB devices for vehicular access systems. Other sub-parts for UWB devices installed in motor and railway vehicles may follow (ETSI EN 302 065-3-x).

More details on the changes of the present document to previous versions are provided in annex F.

## Docum eenvti ePwr

## 1 Scope

The present document specifies technical requirements, limits and test methods for equipment employing UWB for vehicular access devices installed in motor and railway vehicles in the frequency ranges 3,8 GHz to 4,2 GHz and 6,0 GHz to 8,5 GHz.

These equipment types are intended to be utilized for vehicle access, vehicle immobilization and extended vehicle access control functionalities (like closing windows or remotely starting the car).

Further details of the covered EUT can be found in clause 4.2 in the present document.

NOTE: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU [i.1] is given in annex A.

## 2 References

## 2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <a href="https://docbox.etsi.org/Reference/">https://docbox.etsi.org/Reference/</a>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] <u>ETSI EN 303 883-1 (V2.1.1) (06-2024)</u>: "Short Range Devices (SRD) and Ultra Wide Band (UWB); Part 1: Measurement techniques for transmitter requirements".
- ETSI EN 303 883-2 (V2.1.1) (06-2024): "Short Range Devices (SRD) and Ultra Wide Band (UWB); Part 2: Measurement techniques for receiver requirements".
  - [3] <u>ETSI TS 103 941 (V1.1.1) (01-2024)</u>: "Short Range Devices (SRD) and Ultra Wide Band (UWB); Measurement setups and specifications for testing under full environmental profile (normal and extreme environmental conditions)".

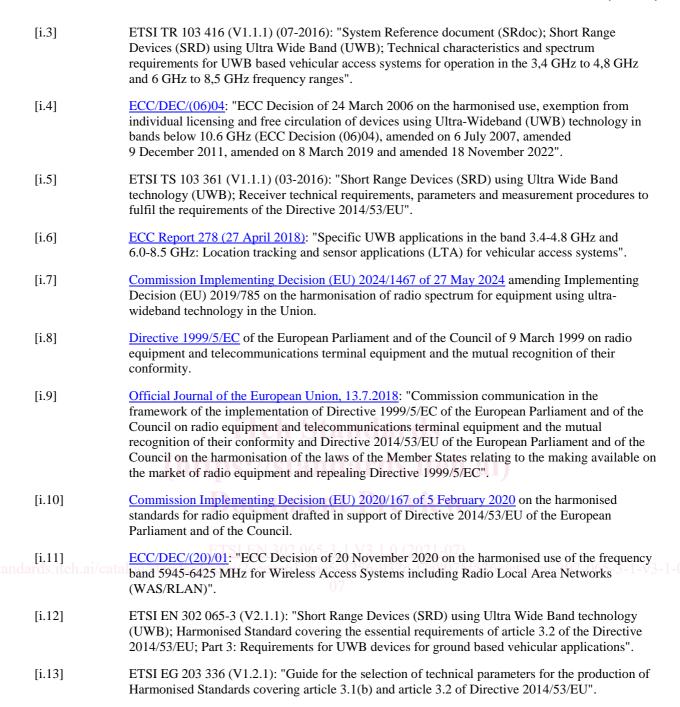

### 2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] <u>Directive 2014/53/EU</u> of the European Parliament and of the Council of 16 April 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of radio equipment and repealing Directive 1999/5/EC (RE-Directive).
- [i.2] Commission implementing Decision C(2015) 5376 final of 4.8.2015 on a standardisation request to the European Committee for Electrotechnical Standardisation and to the European Telecommunications Standards Institute as regards radio equipment in support of Directive 2014/53/EU of the European Parliament and of the Council.

## 3 Definition of terms, symbols and abbreviations

#### 3.1 Terms

[i.14]

For the purposes of the present document, the terms given in ETSI EN 303 883-1 [1], ETSI EN 303 883-2 [2] and the following apply:

ETSI TS 103 567 (V1.1.1): "Requirements on signal interferer handling".

**control equipment:** equipment capable of sending control messages to the EUT, as well as receiving responses to that control command or other status messages, in order to setup the EUT and perform a measurement procedure

control message: one or more commands used to control or configure the EUT

NOTE: Typically submitted on a specific, non-UWB control interface, like CAN-bus interface.

**EUT trigger event:** trigger event on EUT level

NOTE: Which is used for measurement procedures in the present document.

initiator: EUT role in an UWB transmission sequence: EUT initiates UWB transmissions upon a system trigger event

NOTE: For more details see clause 4.3.7.2.

**message:** sequence or exchange of two or more packets in order to transfer information, in particular to generate a ranging information (Time-of-Flight between EUT and companion device)

packet: used to refer to an UWB data frame or aggregated pulse sequence, that is sent over the air

NOTE: Typically, one packet represents a continuous T<sub>on</sub> time.

**receiver spurious emissions:** receiver unwanted emissions that emanate from the EUT. Receiver spurious emissions are generated internally by the receiver or result from the interaction of the RX coupling with the TX signal

**responder:** EUT role in an UWB transmission sequence: EUT responds to an UWB transmission (received UWB packet)

NOTE: For more details see clause 4.3.7.2.

system trigger event: trigger event on system level; usually out of scope for EUT

Time-of-Flight (ToF): travel time of the radio signal between transmitter and receiver

Trigger-Before-Transmit (TBT): mitigation technique as required for vehicular access systems

NOTE: See ECC/DEC/(06)04 [i.4].

vehicle transceiver: UWB enabled unit, installed in the vehicle

## 3.2 Symbols Document Preview

For the purposes of the present document, the symbols given in ETSI EN 303 883-1 [1], ETSI EN 303 883-2 [2] and the following apply:

d Measurement distance from the EUT to the test antenna

D Recommended measurement distance for the Receiver Baseline Sensitivity (RBS) test

 $\begin{array}{ll} d_g & Sensitivity \ degradation \\ delta \ \Theta & Delta \ of \ the \ elevation \ angle \ \Theta \\ delta \ \Phi & Delta \ of \ the \ azimuth \ angle \ \Phi \\ f_c & Centre \ frequency \ of \ wanted \ signal \end{array}$ 

 $\begin{array}{ll} f_H & \text{highest frequency of the operating frequency range} \\ f_L & \text{lowest frequency of the operating frequency range} \\ F_{LOWER} & \text{Lower frequency for the spurious emissions test} \\ F_{UPPER} & \text{Upper frequency for the spurious emissions test} \\ OFR_{max} & \text{Maximum possible OFR (Operating frequency range)} \end{array}$ 

P@EUT Sensitivity @ EUT

P<sub>max</sub> Maximum signal level in duty-cycle measurement

 $\begin{array}{lll} P_{thres} & Threshold \ level \\ s & Second \ (unit) \\ t_{high} & Highest \ temperature \\ t_{low} & Lowest \ temperature \end{array}$ 

 $t_{steps}$  Temperature steps for TX behaviour under the complete environment  $T_{cease}$  cease time, until a transmitter ceases transmission after a trigger event

 $T_{dis}$  Disregard time  $T_{obs}$  Observation time

 $T_{off}$  Time interval between two consecutive bursts when the UWB emission is kept idle

 $T_{on}$  Duration of a burst irrespective of the number of pulses contained

 $T_{on\_cum}$  cumulated Ton time

 $T_{off mean}$  Mean  $T_{off}$ 

 $T_{on max}$  Maximum  $T_{on}$  time

 $TBT_{timeout}$ Trigger-Before-Transmit timeout (cease time after EUT trigger)

 $TBT_{On ext{-}Time}$ Trigger-Before-Transmit On-Time within any 10 s window after first EUT trigger

Parameter to specify the OFR of the emission XBoundary value for determination of spurious domain  $X_{TXUE}$ 

#### 3.3 **Abbreviations**
