## Contents

Intellectual Property Rights .....	10
Foreword .....	10
Introduction .....	11
1    Scope .....	13
2    References .....	14
3    Definitions and abbreviations .....	15
3.1    Definitions .....	15
3.2    Abbreviations .....	17
4    Electrical and physical interface requirements .....	17
5    Procedural interface requirements .....	18
5.1    Link control requirements and procedures .....	18
5.1.1    Link-ID verification .....	18
5.1.2    Link blocking .....	18
6    Services and architecture aspects and requirements .....	19
6.1    On-demand services .....	19
6.1.1    PSTN .....	19
6.1.2    ISDN Basic Access (ISDN-BA) .....	19
6.1.3    ISDN Primary Rate Access (ISDN-PRA) .....	20
6.2    Permanent Line (PL) capability .....	20
6.3    Semi-permanent leased line .....	20
6.4    Permanent leased line service .....	20
7    Control and provisioning .....	21
7.1    Control principles .....	21
d5a8a02442e4/sist-en-300-347-1-v2.2.2-2005	
7.1.1    General requirements and assumptions .....	21
7.1.2    Control of ISDN-BA user port for the PL capability .....	23
7.1.3    Control of ISDN-PRA user ports when the PL capability is provided .....	23
7.1.3.1    Statements and assumptions .....	23
7.1.3.2    ISDN and PL capability .....	23
7.2    Provisioning strategy and requirements .....	24
7.2.1    General .....	24
7.2.2    Provisioning requirements .....	24
7.3    Bearer Channel Connection (BCC) .....	24
7.4    Protection .....	25
8    Protocol architecture and multiplexing structure .....	25
8.1    Functional description .....	25
8.2    Protocol requirements for PSTN and ISDN .....	26
8.3    Time slots .....	27
8.4    Time slot allocation for physical communication channels .....	27
8.4.1    Data types for V5.2 C-paths .....	28
8.4.2    Communication paths when PSTN is provided on a V5.2 interface .....	28
8.4.3    Communication paths when ISDN is provided on a V5.2 interface .....	28
8.5    Layer 2 sublayering and multiplexing on communication channels .....	29
8.6    Layer 3 multiplexing .....	29
8.7    Congestion control .....	29
8.7.1    Flow control end to end .....	29
8.7.2    Congestion control on the V5.2 interface .....	29
8.7.3    Blocking of ISDN user ports at layer 2 .....	29
8.7.4    Flow control using LAPV5-DL mechanisms .....	29

9	Envelope Function sublayer of LAPV5 (LAPV5-EF) .....	29
10	Data Link sublayer of LAPV5 (LAPV5-DL).....	30
10.1	Frame structure for peer-to-peer communication .....	30
10.2	Invalid frames.....	30
10.3	Elements of procedures and formats of fields for data link sublayer peer-to-peer communication .....	30
10.3.1	Link address field format .....	30
10.3.2	Link address field variables .....	30
10.3.2.1	Address field extension bit (EA) .....	30
10.3.2.2	Command/response field bit.....	30
10.3.2.3	V5DLaddr .....	30
10.3.3	Control field formats.....	30
10.3.4	Control field parameters and associated state variables.....	30
10.3.5	Frame types.....	31
10.4	Definition of the peer-to-peer procedures of the data link sublayer .....	31
11	AN frame relay sublayer .....	31
12	Sublayer-to-sublayer communication and mapping function .....	31
13	General layer 3 protocol structures .....	31
13.1	General .....	31
13.2	Information elements that appear in every message (header) .....	32
13.2.1	Protocol Discriminator information element.....	32
13.2.2	Layer 3 Address information element.....	33
13.2.3	Message Type information element .....	33
13.3	Other information elements .....	34
13.4	Protocol message functional definition and information content .....	34
13.5	Codesets .....	34
14	PSTN signalling protocol specification and layer 3 multiplexing.....	34
15	Control requirements and protocol .....	34
15.1	ISDN-BA user port status indication and control <a href="https://standards.itech.ai/catalog/standards/sist/24aca2d4-0f13-46bd-908e-1548a0244c24/sist-en-300-347-1-v2-2-2-2005">https://standards.itech.ai/catalog/standards/sist/24aca2d4-0f13-46bd-908e-1548a0244c24/sist-en-300-347-1-v2-2-2-2005</a> .....	34
15.2	PSTN user port status indication and control <a href="https://standards.itech.ai/catalog/standards/sist/24aca2d4-0f13-46bd-908e-1548a0244c24/sist-en-300-347-1-v2-2-2-2005">https://standards.itech.ai/catalog/standards/sist/24aca2d4-0f13-46bd-908e-1548a0244c24/sist-en-300-347-1-v2-2-2-2005</a> .....	35
15.3	ISDN primary rate user port status indication and control .....	35
15.3.1	General aspects .....	35
15.3.2	Events and function elements relevant for the control of the state machines .....	36
15.3.3	ISDN-PRA user port FSMs, AN (ISDN port) and LE (ISDN port).....	38
15.3.3.1	Description of the states .....	38
15.3.3.2	Definition of port control states.....	38
15.3.3.2.1	ISDN-PRA user port FSM - AN (ISDN port) .....	38
15.3.3.2.2	ISDN-PRA user port FSM - LE (ISDN port) .....	39
15.3.3.3	Principles and procedures .....	39
15.3.3.3.1	General .....	39
15.3.3.3.2	Blocking .....	39
15.3.3.3.3	Blocking request .....	40
15.3.3.3.4	Co-ordinated unblocking .....	40
15.3.3.3.5	User failure/network failure indication .....	40
15.3.3.3.6	Support of the permanent line capability .....	40
15.3.3.4	ISDN port FSM at the AN.....	41
15.3.3.5	ISDN port FSM at the LE .....	42
15.3.4	Performance monitoring aspects .....	42
15.4	Control protocol .....	43
15.4.1	Control protocol message definition and content.....	43
15.4.2	General message format and information element coding .....	43
15.4.3	State definition of the control protocol .....	44
15.4.4	Control protocol procedures .....	44
15.4.5	Accelerated alignment of the port related protocol entities and FSMs .....	45
15.5	V5.2 re-provisioning procedures .....	45
16	Link control requirements and protocol.....	46
16.1	2 048 kbit/s layer 1 link maintenance requirements.....	47

16.1.1	Events and failure reports .....	47
16.1.2	Detection algorithm for events and signals .....	48
16.1.3	V5.2 interface layer 1 link FSM.....	48
16.1.4	Requirements and procedures for the additional functions .....	50
16.2	Link control requirements and procedures .....	50
16.2.1	The link blocking and unblocking.....	50
16.2.2	The link identification.....	51
16.2.3	Events and function elements relevant for the control of the link state machines .....	52
16.2.4	Link control FSM, AN (link) and LE (link).....	53
16.2.4.1	Description of the states .....	53
16.2.4.2	Definition of link control states and general co-ordination requirements.....	54
16.2.4.2.1	Link control FSM - AN (AN_Link).....	54
16.2.4.2.2	Link control FSM - LE (LE_Link) .....	55
16.2.4.3	Principles and procedures .....	55
16.2.4.3.1	General .....	55
16.2.4.3.2	Link blocking.....	56
16.2.4.3.3	Link blocking request .....	56
16.2.4.3.4	Co-ordinated link unblocking .....	56
16.2.4.3.5	Link identification .....	57
16.2.4.4	Link control FSM at the AN.....	58
16.2.4.5	Link control FSM at the LE .....	59
16.3	Link control protocol.....	60
16.3.1	Link control protocol message definition and content .....	60
16.3.1.1	LINK CONTROL message .....	60
16.3.1.2	LINK CONTROL ACK message .....	60
16.3.2	Link control protocol information element definition, structure and coding.....	61
16.3.2.1	Layer 3 address information element .....	61
16.3.2.2	Link control function information element .....	61
16.3.3	Definitions of the link control protocol states .....	62
16.3.4	Link control protocol procedure .....	62
16.3.4.1	General .....	62
16.3.4.2	Start traffic indication .....	63
16.3.4.2.1	Normal operation .....	63
16.3.4.2.2	Exceptional procedures.....	63
16.3.4.3	Stop traffic indication .....	63
16.3.4.3.1	Normal operation .....	63
16.3.4.3.2	Exceptional procedures.....	63
16.3.4.4	Link control layer 3 protocol entity procedure .....	63
16.3.5	Handling of error conditions .....	64
16.3.5.1	Protocol discriminator error .....	64
16.3.5.2	Layer 3 address error .....	64
16.3.5.3	Message type error .....	64
16.3.5.4	Repeated information elements .....	64
16.3.5.5	Mandatory information element missing .....	64
16.3.5.6	Unrecognized information element .....	64
16.3.5.7	Content error of mandatory information elements.....	65
16.3.6	Timers for the link control protocol .....	65
16.3.7	AN and LE side layer 3 protocol entity state tables .....	65
17	BCC protocol elements and procedures .....	66
17.1	General .....	66
17.2	BCC protocol entity definition .....	68
17.2.1	Definition of BCC protocol states .....	68
17.2.1.1	BCC states in the AN .....	68
17.2.1.2	BCC states in the LE .....	69
17.2.2	Definition of BCC protocol primitives, messages and timers .....	70
17.3	BCC protocol message definition and content .....	71
17.3.1	ALLOCATION message .....	72
17.3.2	ALLOCATION COMPLETE message .....	72
17.3.3	ALLOCATION REJECT message .....	73
17.3.4	DE-ALLOCATION message .....	73

17.3.5	DE-ALLOCATION COMPLETE message .....	74
17.3.6	DE-ALLOCATION REJECT message.....	74
17.3.7	AUDIT message .....	74
17.3.8	AUDIT COMPLETE message.....	75
17.3.9	AN FAULT message .....	76
17.3.10	AN FAULT ACKNOWLEDGE message.....	76
17.3.11	PROTOCOL ERROR message.....	76
17.4	BCC information element definition, structure and coding .....	77
17.4.1	BCC Reference Number information element .....	77
17.4.2	Other information elements.....	77
17.4.2.1	User Port Identification information element .....	78
17.4.2.2	ISDN Port Time Slot Identification information element.....	78
17.4.2.3	V5 Time Slot Identification information element.....	79
17.4.2.4	Multi-Slot Map information element.....	79
17.4.2.5	Reject Cause information element.....	80
17.4.2.6	Protocol Error Cause information element.....	82
17.4.2.7	Connection Incomplete information element.....	83
17.5	Description of the BCC protocol and the BCC procedures .....	84
17.5.1	General.....	84
17.5.2	Bearer channel allocation - normal procedure .....	84
17.5.3	Bearer channel allocation - exceptional procedures.....	85
17.5.3.1	Bearer channel allocation .....	85
17.5.3.2	Bearer channel allocation reject .....	85
17.5.3.3	Bearer channel allocation abort.....	85
17.5.3.4	Bearer channel allocation request received for existing connection.....	86
17.5.3.5	Bearer channel allocation, connection override requested .....	86
17.5.4	Bearer channel de-allocation - normal procedure .....	86
17.5.5	Bearer channel de-allocation - exceptional procedures.....	86
17.5.5.1	Bearer channel de-allocation .....	86
17.5.5.2	Bearer channel de-allocation reject .....	87
17.5.5.3	Bearer channel de-allocation process message missing.....	87
17.5.6	Audit procedure <a href="https://standards.iteh.ai/catalog/standards/list/34ac2314-0f34-46bd-908c">https://standards.iteh.ai/catalog/standards/list/34ac2314-0f34-46bd-908c</a> .....	87
17.5.7	AN internal failure notification procedure <a href="https://standards.iteh.ai/catalog/standards/list/34ac2314-0f34-46bd-908c">https://standards.iteh.ai/catalog/standards/list/34ac2314-0f34-46bd-908c</a> .....	87
17.5.8	Handling of error conditions .....	88
17.5.8.1	Protocol discriminator error .....	88
17.5.8.1a	BCC Reference Number coding error .....	89
17.5.8.2	Message type error .....	89
17.5.8.3	Information element out of sequence .....	89
17.5.8.4	Repeated mandatory information elements .....	89
17.5.8.4a	Repeated optional information element.....	90
17.5.8.5	Mandatory information element missing .....	90
17.5.8.6	Unrecognized information element .....	90
17.5.8.7	Content error of mandatory information element .....	91
17.5.8.8	Content error of optional information element.....	91
17.5.8.9	Unexpected message .....	91
17.5.8.10	Optional information element not allowed .....	91
17.6	List of system parameters (timers).....	92
17.7	LE side and AN side state transition tables .....	93
18	Protection protocol specification .....	95
18.1	General .....	95
18.1.1	Introduction.....	95
18.1.2	Provisioning of physical and logical C-channels .....	95
18.1.3	Separation of responsibilities .....	96
18.1.4	Management of C-channel resources after failure.....	97
18.1.5	Monitoring functions and detection of failures .....	98
18.1.5.1	Failure of a 2 048 kbit/s link .....	98
18.1.5.2	Flag monitoring .....	98
18.1.5.3	Data link monitoring .....	98
18.1.6	Functional model for the protection protocol.....	98
18.2	Other principles .....	99

18.3	Protection protocol entity definition.....	100
18.3.1	Definition of protection protocol states .....	100
18.3.1.1	States in the AN.....	100
18.3.1.2	States in the LE .....	100
18.3.2	Definition of protection protocol events .....	100
18.4	Protection protocol message definition and content .....	103
18.4.1	SWITCH-OVER REQ message.....	103
18.4.2	SWITCH-OVER COM message.....	103
18.4.3	OS-SWITCH-OVER COM message .....	104
18.4.4	SWITCH-OVER ACK message .....	104
18.4.5	SWITCH-OVER REJECT message .....	104
18.4.6	PROTOCOL ERROR message.....	105
18.4.7	RESET SN COM message.....	105
18.4.8	RESET SN ACK message .....	105
18.5	Protection protocol information element definition, structure and coding .....	106
18.5.1	Logical C-channel identification information element.....	106
18.5.2	Sequence-number information element.....	106
18.5.3	Physical C-channel identification information element.....	107
18.5.4	Rejection Cause information element .....	107
18.5.5	Protocol Error Cause information element.....	108
18.6	Protection protocol procedures.....	109
18.6.1	General.....	109
18.6.2	Broadcast of protection protocol messages on the two data links of the primary and secondary link.....	110
18.6.2.1	Transmission of protection protocol messages.....	110
18.6.2.2	Receipt of protection protocol messages .....	110
18.6.2.3	Sequence number reset procedure.....	110
18.6.2.3.1	Normal procedure.....	110
18.6.2.3.2	Exceptional procedures.....	111
18.6.3	Standard protection switch-over procedure initiated by LE-side.....	111
18.6.3.1	Normal procedure.....	111
18.6.3.2	Exceptional procedures .....	112
18.6.3.3	Procedure on expiry of timer TSO1.....	112
18.6.4	Dedicated protection switch-over procedure initiated by OS-LE.....	113
18.6.4.1	Normal procedure.....	113
18.6.4.2	Exceptional procedures .....	113
18.6.4.3	Procedure on expiry of timer TSO2 .....	113
18.6.5	Protection switch-over procedure requested by AN-side.....	114
18.6.5.1	Normal procedure.....	114
18.6.5.2	Exceptional procedure, AN cannot comply with switch-over command from LE .....	115
18.6.5.3	Exceptional procedure, LE cannot comply with switch-over request from AN .....	115
18.6.5.4	Procedure on expiry of timer TSO3 .....	115
18.6.6	Handling of error conditions.....	115
18.6.6.1	Protocol discriminator error .....	116
18.6.6.1a	Logical C-Channel identification error.....	116
18.6.6.2	Message type error .....	116
18.6.6.3	Repeated mandatory information element .....	117
18.6.6.4	Mandatory information element missing .....	117
18.6.6.5	Unrecognized information element .....	117
18.6.6.6	Content error of mandatory information element .....	118
18.6.6.7	Unexpected message .....	118
18.7	List of system parameters .....	118
18.8	AN and LE side state tables.....	119
18.8.1	Protection protocol FSM in the AN .....	119
18.8.2	Protection protocol FSM in the LE.....	120

<b>Annex A (normative):</b>	<b>Requirements for the support of the PL capability through an ISDN port .....</b>	<b>122</b>
A.1	Requirements for the support of the PL capability through an ISDN basic access .....	122
A.2	Requirements for the support of the PL capability through an ISDN primary rate access .....	122
<b>Annex B (normative):</b>	<b>Assumptions and requirements for the support of semi-permanent leased lines .....</b>	<b>123</b>
B.1	General .....	123
B.2	Signalling associated with semi-permanent leased lines .....	123
B.3	User ports .....	123
B.4	Requirements for non-ISDN user ports for semi-permanent leased lines.....	123
<b>Annex C (normative):</b>	<b>Basic requirements of the system management functions in the AN and the LE .....</b>	<b>124</b>
<b>Annex D (normative):</b>	<b>Use of the protocol information elements for national PSTN protocols .....</b>	<b>139</b>
<b>Annex E (normative):</b>	<b>BCC protocol application principles .....</b>	<b>140</b>
E.1	Introduction .....	140
E.2	Time slot usability .....	141
E.3	Time slot allocation and de-allocation rules .....	141
E.3.1	General .....	141
E.3.2	Multi-slot connections .....	143
E.3.3	Override capability .....	144
E.4	Audit procedure rules .....	144
E.5	AN internal failure notification rules.....	145
E.6	AN internal failure rules .....	145
E.7	BCC protocol errors .....	146
E.8	Arrow diagrams: examples of BCC protocol and DSS1 co-ordination .....	146
E.8.1	ISDN call initiated by the subscriber .....	146
E.8.1.1	Normal procedure .....	146
E.8.1.2	Exceptional procedure .....	147
E.8.1.3	Simultaneous ISDN call set-up (from the same ISDN port) .....	147
E.8.2	ISDN call initiated by the network .....	148
E.8.2.1	B-channel negotiation not allowed (e.g. passive bus configuration).....	148
E.8.2.2	B-channel negotiation allowed (e.g. point-to-point configuration) .....	148
E.8.2.3	ISDN call waiting supplementary service support .....	149
E.8.3	ISDN call release initiated by the subscriber.....	149
E.8.4	ISDN call release initiated by the network .....	150
E.8.5	Terminal portability supplementary service support.....	150
E.9	Arrow diagrams: examples of BCC and PSTN protocol co-ordination.....	151
E.9.1	PSTN call initiated by the subscriber .....	151
E.9.1.1	Normal procedure .....	151
E.9.1.2	Exceptional procedure .....	151
E.9.2	PSTN call initiated by the network.....	152
E.9.3	Call collision.....	153
E.9.3.1	Call Collision: Originating call has priority .....	153
E.9.3.2	Terminating call has priority.....	153
E.9.4	Call release .....	154
E.9.4.1	Call release initiated by the subscriber.....	154

E.9.4.2	Call release initiated by the network .....	154
E.10	Link failure rules .....	155
<b>Annex F (informative):</b>	<b>Service scenarios, architecture and functional definition of access arrangements with AN at the LE .....</b>	<b>156</b>
F.1	Conclusions on multiple V5 interface applications .....	156

## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://www.etsi.org/ipr>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Signalling Protocols and Switching (SPS).

The present document is part 1 of a multi-part EN covering the V interfaces at the digital Local Exchange (LE); V5.2 interface for the support of Access Network (AN), as described below:

**Part 1: "V5.2 interface specification";**

Part 2: "Protocol Implementation Conformance Statement (PICS) proforma specification";

Part 3: "Test Suite Structure and Test Purposes (TSS&TP) specification for the network layer (AN side)";

Part 4: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the network layer (AN side)";

Part 5: "Test Suite Structure and Test Purposes (TSS&TP) specification for the network layer (LE side)";

Part 6: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the network layer";

Part 7: "Test Suite Structure and Test Purposes (TSS&TP) specification for the data link layer";

Part 8: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification for the data link layer";

Part 9: "Test specification for the physical layer".

### National transposition dates

Date of adoption of this EN:	10 December 1999
Date of latest announcement of this EN (doa):	31 March 2000
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	30 September 2000
Date of withdrawal of any conflicting National Standard (dow):	30 September 2000

# Introduction

## General

The work on a new V interface concept was initiated by a request from the ETSI Technical Assembly (TA) to Technical Committee (TC) Network Aspects (NA), in particular Technical Sub-Committee (STC) NA4 to consider, in co-operation with other STCs involved, possible new structures and interfaces for the connection of new access arrangements to local exchanges. After two meetings (in January and May 1991) the work was terminated with some guidelines for further consideration.

The work was taken over by a special experts group, set up by TC SPS, working under STC SPS3, with experts from several STCs, e.g. SPS5, Transmission and Multiplexing (TM) 3 and NA4. This was to avoid a split of the difficult task to several STCs requiring intensive co-operation and possibly may have caused significant delay of the standardization work. The work on Access Networks (AN) was later transferred to a new working group SPS9.

TC SPS identified in the terms of reference two interface concepts, one based on a static multiplexer principle, now called the V5.1 interface, and the other based on a dynamic, concentrator type, principle, now called the V5.2 interface.

## Major differences between the V5.1 interface and the V5.2 interface

The V5.1 specification (EN 300 324-1 [8]) is a stand-alone standard whereas this V5.2 specification (EN 300 347-1 [11]) references parts of EN 300 324-1 [8].

V5.1 uses only one 2 048 kbit/s link whereas V5.2 may use up to sixteen (16) 2 048 kbit/s links on one interface.

V5.1 does not support concentration whereas V5.2 is inherently designed to support it using a dedicated protocol known as the Bearer Channel Connection (BCC) protocol.

V5.1 does not support ISDN primary rate access user ports whereas V5.2 does.

V5.1 has no concept of communication channel protection whereas this function is available for V5.2 when the V5.2 interface uses more than one 2 048 kbit/s link. A specific protocol, known as the protection protocol, is provided for this function.

SIST EN 300 347-1 V2.2.2:2005  
https://standards.iteh.ai/catalog/standards/sist/24aca2d4-0113-46bd-908e-

d5a8a02442c4/sist-en-300-347-1-v2-2-2-2005

The control protocol for V5.2 is slightly modified to that used for V5.1. A link control protocol is specified for V5.2 as multiple links have to be managed.

Major differences between the first edition (EN 300 347-1 [11] (1994)) and this the second edition (EN 300 347-1 [11]):

- 1) Includes the amendments A1.
- 2) State that Link-ID verification is not needed for V5.2 interface on single link.
- 3) In case of AN internal faults on unavailable links may be blocked by the AN.
- 4) Eliminate potential misalignment conditions at blocking of user ports (co-ordinated unblocking).
- 5) Extension of the Accelerated alignment of the port procedure.
- 6) Clarification of mandatory and optional information elements (error handling).
- 7) System startup:
  - to use the same principles for both V5.1 and V5.2;
  - improved robustness during startup.
- 8) Extended definition of data link failure.
- 9) More timers have been defined for the supervision of ongoing processes during startup.

The modifications have affected following parts of the standard:

- Clause 4 Generalizing the electrical and physical requirements.
- Subclause 5.1.2 Enhancements of the link blocking in case of AN internal failures.
- Subclause 8.7.4 Add reference to V5.1 about the need of flow control mechanism on layer 2.
- Subclause 15.4 Accelerated port alignment is an additional function that reduces the messages over the V5 interface during startup procedures.
- Subclause 16.2.4.3.4 Enhancements of the co-ordinated unblocking procedures.

General for some of the message types with optional information elements has been changed to conditional.

Annex C has got the most modifications. It is written to be inline with V5.1 (EN 300 324-1 [8]). When an item is the same it is only referenced to V5.1. Procedures that have been modified mostly are related to startup, restart of the interface and also link blocking/unblocking.

### Associated standards

The following set of standards and reports is expected to relate to the V5 interface concept:

- EN 300 324-1 [8]: V interfaces at the digital Local Exchange (LE); V5.1 interface for the support of Access Network (AN); Part 1: V5.1 interface specification;
- EN 300 347-1 [11]: V interfaces at the digital Local Exchange (LE); V5.2 interface for the support of Access Network (AN); Part 1: V5.2 interface specification;
- ETS 300 376 series: Q3 interface at the Access Network (AN) for configuration management of V5 interfaces and associated user ports; **iTeh STANDARD PREVIEW  
(standards.iteh.ai)**
- ETS 300 377 series: Q3 interface at the Local Exchange (LE) for configuration management of V5 interfaces and associated customer profiles; SIST EN 300 347-1 V2.2.2:2005  
<https://standards.iteh.ai/catalog/standards/sist/24aca2d4-0f13-46bd-908e->
- ETS 300 378-1 [14]: Q3 interface at the Access Network (AN) for fault and performance management of V5 interfaces and associated user ports; Part 1: Q3 interface specification;
- ETS 300 379-1 [15]: Q3 interface at the Local Exchange (LE) for fault and performance management of V5 interfaces and associated customer profiles;
- ETR 150 [16]: V5 interface; PSTN protocol mapping examples.

## 1 Scope

This first part of EN 300 347 specifies the electrical, physical, procedural and protocol requirements for the V5.2 interface between an Access Network (AN) and the Local Exchange (LE) for the support of the following access types:

- analogue telephone access;
- ISDN basic access with a line transmission system conforming to ETS 300 297 [4] for the case with an NT1 separate from the AN;
- ISDN basic access with a user network interface according to ETS 300 012 [3] at the user side of the AN, (i.e. the interface at the T reference point);
- ISDN primary rate access with a line transmission system conforming to ETS 300 233 [10] for the case with a NT1 separate from the AN;
- ISDN primary rate access with a user network interface according to ETS 300 011 [9] at the user side of the AN, (i.e. the interface at the T reference point);
- other analogue or digital accesses for semi-permanent connections without associated out-band signalling information,

with flexible information channel (bearer channel) allocation on a call by call basis which provides concentration capability within the AN and over the V5.2 interface. The present document does not specify the implementation of the requirements within the AN and does not constrain any implementation alternative as long as the functionality at the V5.2 interface as specified in the present document is met.

A link control capability is provided in order to manage the possible multi-link arrangements within a V5.2 interface. See clause 16.

[SIST EN 300 347-1 V2.2.2:2005](#)

A protection capability is provided in order to allow the interface to continue functioning in the event of 2 048 kbit/s link failures.

<https://standards.itec.ae/catalog/standards/sist/en-347-1-v2-2-2-2005>

The present document should be used in conjunction with EN 300 324-1 [8]. The two documents share a common format and clauses within EN 300 324-1 [8] are referenced in the present document.

Annex F provides an overview of the service scenarios and architecture taken as the conceptual basis for the specification of the V5.2 interface.

Annex J provides additional notes and information flow diagrams to the PSTN protocol specification. The use of the protocol information elements for the definition of the national PSTN protocols is defined in annex D. Annex K provides the definition of the Layer 3 PSTN protocol error detection.

The Specification Description Language (SDL) diagrams for the additional V5.2 protocols and the management function for V5.2 are given in annex L.

Permanent lines from an ISDN user port or from other types of customer access, which bypass the LE, are outside the scope of the present document. Requirements for the support of permanent lines in ISDN basic and primary rate accesses, using one or a number of B-channels of a user port, are specified in annex A.

Semi-permanent leased lines are supported. They are routed through the V5.2 interface by application of a provisioning procedure. The assumptions and requirements for this procedure are defined in annex B.

Annex M provides an overview of frame formats used in the V5.2 interface and also the message types allocated to the V5.2 interface.

Annex N describes the protocol architecture for the ISDN and PSTN user port status control information transfer.

Annex C specifies the basic assumptions of the management function in the LE and the AN to support correct operation and control of the configuration.
