Foreword.....	xii
Introduction.....	xiii
1 Scope.....	1
2 Normative references.....	2
3 Terms and definitions.....	8
4 Comparative performance assessment at standard reference conditions.....	12
4.1 General.....	12
4.2 Standard reference conditions.....	13
4.2.1 General.....	13
4.2.2 Ambient conditions.....	13
4.2.3 Exhaust conditions.....	13
4.2.4 Cooling water conditions (if applicable).....	13
4.2.5 Working fluid heater or cooler.....	13
4.2.6 Fuel for comparative performance assessment.....	13
5 Performance at site conditions.....	14
5.1 Site rating.....	14
5.1.1 Site rated power.....	14
5.1.2 Site minimum load.....	14
5.1.3 Site net heat rate.....	14
5.1.4 Site peak load.....	14
5.2 Site conditions.....	14
5.3 Corrections.....	15
6 Site conditions and utilities.....	15
6.1 Air quality.....	15
6.2 Water quality.....	16
6.3 Steam quality.....	16
6.4 Purge media quality.....	16
6.5 Interface and utility connection points.....	17
6.6 Gas turbine orientation due to site conditions.....	17
7 Discharges and emissions to the environment.....	18
7.1 General.....	18
7.2 Design philosophy for prevention of unplanned release of fluids.....	18
7.3 Noise emissions.....	18
7.3.1 General.....	18
7.3.2 Methods for sound measurements and predictions.....	18
7.3.3 Sound level within the gas turbine enclosure.....	19
7.4 Exhaust emissions.....	19
7.4.1 General.....	19
7.4.2 Responsibilities.....	19
7.4.3 Reporting emissions.....	19
7.4.4 Start-up emissions.....	20
7.5 Post-combustion controls.....	20
7.6 Emission monitoring.....	20
7.7 Water, steam and other emissions.....	20
7.8 Visible plumes.....	20
8 Contract fuels.....	21
8.1 General.....	21
8.2 Types (gas, liquids and combination).....	21
8.3 Fuel composition.....	21
8.4 Fuel supply requirements.....	22

8.5	Alternative fuels (syngas, low calorific value gas, LPG, NGL, Naphtha, LNG, high hydrogen and residual fuel oil).....	22
9	Fuel systems and treatment	23
9.1	General requirements.....	23
9.2	Gas fuel supply.....	23
9.3	Liquid fuel supply.....	23
9.4	Fuel filter/separator.....	24
	9.4.1 Gas fuel.....	24
	9.4.2 Liquid fuel.....	24
9.5	Pre-heating requirements for the dew point control of fuel gas.....	24
9.6	Pre-heating requirements for liquid fuels approaching their pour point.....	24
9.7	Alternative fuels – multi-fuel capability.....	24
9.8	Mixed fuel co-firing.....	25
9.9	Fuel for igniter.....	25
9.10	Start-up fuel, main fuel and fuel changeover.....	25
9.11	Water and steam injection systems.....	25
9.12	Fuel purge, vents and drains.....	25
9.13	Fuel system metering.....	25
9.14	Fuel system pipework and vessels design.....	26
	9.14.1 General.....	26
	9.14.2 Fuel pipes, joints and flanges.....	26
	9.14.3 Flexible pipes.....	26
10	Regulations, codes and standards	26
10.1	General requirements.....	26
10.2	Design codes and standards.....	27
10.3	Verification.....	27
11	Operating requirements	28
11.1	General requirements.....	28
11.2	Operating range and limitations.....	28
11.3	Starts (time to start, number of starts, start restrictions).....	28
11.4	Loading/de-loading.....	29
11.5	Grid operational requirements.....	29
11.6	Frequency response.....	30
11.7	Location of controls HMI.....	30
11.8	Operation documents.....	30
11.9	Island mode operation and black start.....	30
11.10	Black start and black grid restoration.....	31
12	Quality	31
12.1	Quality management system.....	31
	12.1.1 General.....	31
	12.1.2 Project quality manager.....	31
	12.1.3 Project quality plan.....	31
	12.1.4 Quality control plan.....	32
	12.1.5 Inspection and test plan.....	32
12.2	Quality monitoring and approval.....	32
	12.2.1 Sub-suppliers and supply chain quality monitoring.....	32
	12.2.2 Quality surveillance by the Purchaser.....	33
	12.2.3 Equipment approvals of statutory and coded items.....	33
	12.2.4 Quality control record.....	33
	12.2.5 Control of non-conforming products and services.....	33
	12.2.6 Concessions.....	33
	12.2.7 Project design reviews.....	34
13	Reliability, availability and maintainability	34
13.1	Basic RAM assessment.....	34
	13.1.1 General.....	34
	13.1.2 Reliability.....	34

ITeH STANDARD PREVIEW
 (standards.iteh.ai)

ISO 19859:2016
<https://standards.iteh.ai/catalog/standards/sist/ccb57bb8-712f-4e5f-b7e3-43092e97e548/iso-19859-2016>

13.1.3	Starting reliability	35
13.1.4	Availability	36
13.1.5	Maintainability	36
13.1.6	Spares holding	37
13.1.7	Operating logs	37
13.2	Additional RAM requirements	38
13.2.1	General requirements	38
13.2.2	Forced outage factor and equivalent forced outage factor	38
13.2.3	Equivalent availability factor	39
13.2.4	Equivalent operating hours	41
14	Safety requirements	41
14.1	General	41
14.2	Risk assessment	41
14.3	Fire precautions	41
14.3.1	General	41
14.3.2	Enclosure fire precautions	42
14.3.3	Gas turbine hall fire precautions	42
14.4	Hazardous area classification and explosion prevention and protection	42
14.5	Flammable gas detection	42
14.6	Heat detectors	42
14.7	Smoke detection	42
14.8	Enclosed space access	42
14.9	Containment and rupture	43
14.10	Hydraulically operated safety equipment	43
14.11	Fuel system pressure testing	43
14.12	Clutch	43
14.13	Functional safety	43
14.14	Hazardous material	43
14.15	Overspeed protection system testing	44
14.16	Manual isolation features	44
14.17	Hazard identification and operability studies	44
15	Measurement, language, identification and standardization	45
15.1	Units of measurement	45
15.2	Language	45
15.2.1	General	45
15.2.2	Language for communication	45
15.2.3	Language for documentation	45
15.2.4	Language for HMI display screens	45
15.2.5	Language for labelling and signs	45
15.3	Equipment identification system, nameplates and labels	46
15.4	Standardization and interchangeability	46
16	Corrosion prevention, painting and finishing	47
16.1	General requirements	47
16.2	Painting and coating	47
16.2.1	General	47
16.2.2	Type of exposure	47
16.2.3	Visual assessment of workmanship of surface	48
16.2.4	Preparation of the surface	49
16.2.5	Application procedures	49
16.2.6	Paint materials	49
16.2.7	Galvanized coatings	49
16.2.8	Inspections and tests	50
16.3	Galvanic effects	50
17	Packing and transportation	50
17.1	Preparation	50
17.2	Packing	51

17.3	Transportation.....	52
18	Gas turbine core.....	52
18.1	Design requirements.....	52
18.1.1	Life (hours and weighted hours, starts, cyclic events).....	52
18.1.2	Mechanical design shaft power limitations.....	53
18.1.3	Radial and axial clearances and control.....	53
18.1.4	Compressor.....	53
18.1.5	Turbine.....	54
18.1.6	Combustor.....	55
18.1.7	Casings.....	56
18.1.8	Rotor.....	56
18.1.9	Rotor standstill corrosion protection.....	57
18.1.10	Rotor overspeed capability.....	57
18.1.11	Vibration and dynamics.....	57
18.2	Vibration acceptance limits.....	58
18.2.1	General.....	58
18.2.2	Measurements on rotating shafts.....	59
18.2.3	Measurements on non-rotating parts.....	59
18.3	Balance quality.....	60
18.3.1	Balance planes.....	60
18.3.2	Balancing general.....	60
18.3.3	Low speed balancing.....	60
18.3.4	High speed balancing.....	60
18.4	Bearings and supports.....	61
18.5	Modified cycles.....	61
18.5.1	General.....	61
18.5.2	External air coolers and direct steam cooling.....	61
19	Gearboxes and couplings.....	62
19.1	Load gearbox.....	62
19.2	Auxiliary gears.....	62
19.3	Balancing and vibration.....	62
19.4	Main drive shaft couplings.....	63
19.4.1	General.....	63
19.4.2	Main drive flexible couplings – speeds not exceeding 4 000 r/min.....	63
19.4.3	Main drive flexible couplings – speeds exceeding 4 000 r/min.....	63
19.4.4	Quill shaft main drive flexible couplings.....	64
19.4.5	Rigid couplings.....	64
19.4.6	Over-torque devices.....	64
19.4.7	Coupling guards.....	64
20	Air inlet system.....	65
20.1	General.....	65
20.2	Air filter.....	65
20.3	Inlet filter house.....	66
20.4	Water removal systems.....	67
20.5	Inlet cooling systems.....	67
20.6	Inlet ducts and silencer.....	68
20.7	Resonance of ducts, silencer or turning baffles.....	68
20.8	Materials, fixings cladding and sealing.....	69
20.9	Isolation flaps and roller shutters.....	69
20.10	Anti-icing.....	70
20.10.1	General.....	70
20.10.2	Compressor bleed anti-icing heating (static filter).....	70
20.10.3	Electric infrared heating (static filter).....	70
20.10.4	Inlet coils steam or hot water heating.....	70
20.10.5	Electrical resistance heating.....	70
20.10.6	Pulse clean filters.....	70
20.10.7	Inlet heating fire protection and access limitations.....	71

21	Exhaust system	71
	21.1 General.....	71
	21.2 Interface between gas turbine and exhaust system.....	72
	21.3 Design requirements.....	72
	21.4 Mechanical requirements.....	73
	21.5 Insulation.....	73
	21.6 Noise requirements and silencers.....	73
	21.7 Safety requirements.....	73
	21.8 Diverter damper.....	74
	21.9 Exhaust stack.....	74
22	Civil design and foundation requirements	75
	22.1 General.....	75
	22.2 Basis of design.....	75
	22.2.1 General.....	75
	22.2.2 Allowable bearing capacity.....	75
	22.2.3 Foundations, settlements and deflections.....	75
	22.2.4 Levelling datum(s).....	76
23	Generator design interface requirements	76
	23.1 Electrical fault torque.....	76
	23.2 Matching of the generator to gas turbine.....	76
	23.3 Generator overspeed.....	76
	23.4 Starting device.....	77
24	Heat recovery steam generation design interface	77
25	Combined cycle applications	78
	25.1 General.....	78
	25.2 Gas turbines in combined cycle applications.....	78
	25.3 Single-shaft arrangements start restrictions.....	79
	25.3.1 General.....	79
	25.3.2 Single-shaft rotor train – with clutch.....	79
	25.3.3 Single-shaft rotor train – no clutch.....	79
26	Control and instrumentation requirements	80
	26.1 Control.....	80
	26.1.1 General requirements.....	80
	26.1.2 Architecture.....	80
	26.1.3 Human machine interfacing (HMI).....	80
	26.1.4 Alarm and annunciation.....	81
	26.1.5 Starting.....	81
	26.1.6 Sequence control.....	81
	26.1.7 Governing and limiting.....	82
	26.1.8 Unloading and shutdown.....	83
	26.1.9 Automation.....	84
	26.2 Instrumentation and associated equipment.....	85
	26.2.1 General.....	85
	26.2.2 Operability and diagnostics.....	85
	26.2.3 Control equipment and instruments.....	85
	26.2.4 Gauges.....	86
	26.2.5 Solenoid valves.....	86
	26.2.6 Vibration monitoring and axial position equipment.....	86
	26.2.7 Actuators.....	87
	26.2.8 Trace heating.....	87
	26.3 Cabling and control panel installation.....	88
	26.3.1 General.....	88
	26.3.2 Cabling.....	88
	26.4 Electrical C&I equipment.....	89
	26.4.1 General.....	89
	26.4.2 Electrical supplies and other services.....	89

26.4.3	Spare termination.....	89
26.5	Power supplies.....	90
26.5.1	General.....	90
26.5.2	Power supply sizing.....	90
26.5.3	Intrinsically safe power supplies.....	90
26.5.4	Battery systems.....	91
26.5.5	UPS systems.....	91
26.6	Electrical/electronic equipment protection.....	91
26.6.1	Lightning and surge protection.....	91
26.6.2	Electrostatic discharges (ESD).....	91
26.6.3	Electromagnetic compatibility (EMC).....	91
26.6.4	Electric arc welding.....	92
26.6.5	Earthing and bonding.....	92
26.7	Equipment protection.....	92
26.7.1	General.....	92
26.7.2	Protection systems.....	92
26.7.3	Lubrication system.....	93
26.7.4	Fuel system.....	94
26.8	Fire precautions.....	94
26.8.1	General.....	94
26.8.2	Fire detection.....	94
26.8.3	Enclosure fire precautions.....	94
26.8.4	Gas detection.....	94
26.8.5	Smoke detection.....	94
26.9	Emission control.....	95
26.9.1	General.....	95
26.9.2	Exhaust emission monitoring.....	95
26.9.3	Periodic sampling.....	96
26.10	Hazardous areas and certified equipment.....	96
26.11	Control and instrumentation, maintenance and spare parts.....	96
26.11.1	General.....	96
26.11.2	Equipment access.....	96
26.12	Data communications.....	97
26.12.1	General.....	97
26.12.2	Data acquisition storage system.....	97
26.13	C&I system commissioning.....	97
27	Electrical system requirements.....	98
27.1	General requirements.....	98
27.2	Design, layout and redundancy.....	100
27.3	Earthing and lightning protection, equipotential bonding.....	100
27.4	LV power supply requirements.....	101
27.5	LV switchgear and control equipment.....	102
27.6	DC distribution.....	102
27.7	Battery including battery charger – DC/AC converter.....	103
27.8	Control system power supply.....	104
27.9	Conductors, cables and wiring practices general.....	104
27.10	Conductors, cables and wiring practices outside cabinets.....	105

ISO 19859:2016

<https://standards.iteh.ai/catalog/standards/sist/ccb57bb8-712f-4e5f-b7e3-43092e87c548/iso-19859-2016>

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#).

The committee responsible for this document is ISO/TC 192, *Gas turbines*.

ISO 19859:2016

Introduction

This International Standard provides technical information to be used for the procurement of gas turbines and the associated gas turbine systems for power generation by a Purchaser from a Contractor.

It provides a basis for the submission of tenders in line with the different environmental and safety requirements. It also specifies, wherever possible, criteria to establish whether these are met.

It defines a standard framework for dealing with questions of fuel and other matters, such as the minimum information to be provided by both the Purchaser and the Contractor. It does not, however, purport to include all necessary information for a contract and each gas turbine installation should be considered in its entirety. Attention is drawn to the need for technical consultation between the Purchaser and the Contractor to ensure compatibility of equipment being supplied, particularly where the responsibility for supply may be divided.

Because of the very widely varying operating modes for gas turbines in practice, distinct categories of operating modes are specified with which a “standard” rating can be associated. These ratings are made on the basis of the ISO standard ambient reference conditions.

Gas turbine applications — Requirements for power generation

1 Scope

This International Standard specifies the minimum technical and documentation requirements for the evaluation and procurement of gas turbine systems for electrical power generation.

It applies to simple cycle and combined cycle gas turbines for both onshore and offshore applications, where applicable. It also applies to gas turbines used in cogeneration (see ISO 11086:1996, Annex B). Testing of the gas turbine in combination with a generator is included in the scope.

It is not applicable to gas turbines used for all types of propulsion including aircraft, mobile barges, floating production vessels and marine propulsion applications and microturbines.

This International Standard defines the requirements for gas turbine power generation from an international perspective based on the content of existing, recognized ISO and IEC standards to the greatest extent practical. Nonetheless, it is recognized that within the industry other codes or standards are used, some of which are included in the text of this International Standard. The use of other such codes and standards is permissible provided an appropriate and acceptable level of requirements, functional design and safety is achieved and agreement has been reached for their use between the Purchaser and Contractor and such use is suitably documented.

Consideration should be given to applying/using standards in the following hierarchical order: international; regional; national; local.

This International Standard identifies the requirements for both the Purchaser and Contractor attributable to the design and procurement of a gas turbine power generation package.

The defined requirements apply to the scope of supply, except where excluded, encompassing the following equipment and the associated selected options, located within the power generation package, (see 3.14), listed below:

- gas turbine package;
- load shaft coupling and clutch, as applicable;
- air inlet system;
- exhaust system;
- fuel equipment;
- control equipment;
- electrical equipment;
- additional auxiliary systems, including starting, lubrication, barring, compressor wash, pipework, drains and vents;
- fire and gas protection;
- cooling water equipment.

Where applicable to the integrity of the gas turbine package, the interface and applicable design requirements are included for equipment, utilities and supplies that interface with the power generation package.
