Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

10.6.2.2.14 Group call release request (MCPTT server – MCPTT client) 37
10.6.2.2.14a Group call release request (MCPTT client – MCPTT server) 37
10.6.2.2.15 Group call release request (MCPTT server – MCPTT server) 38
10.6.2.2.16 Group call release response (MCPTT client – MCPTT server) 38
10.6.2.2.17 Group call release response (MCPTT server – MCPTT server) 38
10.6.2.2.18 Group call rejoin request (MCPTT client – MCPTT server) 38
10.6.2.2.19 Group call rejoin response (MCPTT server – MCPTT client) 39
10.6.2.2.20 Group join request (MCPTT client – MCPTT server) 39
10.6.2.2.21 Group join response (MCPTT server – MCPTT client) 39
10.6.2.2.22 Group call leave request (MCPTT server – MCPTT client) 40
10.6.2.2.23 Group call leave response (MCPTT client – MCPTT server) 40
10.6.2.2.24 Group interrogate request (MCPTT server – MCPTT server) 40
10.6.2.2.25 Group interrogate response (MCPTT server – MCPTT server) 40
10.6.2.2.26 Group-broadcast group call request (MCPTT client – MCPTT server) 41
10.6.2.2.27 Group-broadcast group call request (MCPTT server – MCPTT client) 41
10.6.2.2.28 Group-broadcast group call response (MCPTT client – MCPTT server) 41
10.6.2.2.29 Group-broadcast group call response (MCPTT server – MCPTT client) 42
10.6.2.2.30 Group-broadcast group call release request (MCPTT client – MCPTT server) 42
10.6.2.2.31 Group-broadcast group call release request (MCPTT server – MCPTT client) 42
10.6.2.2.32 Group-broadcast group call release response (MCPTT server – MCPTT client) 42
10.6.2.2.33 Group-broadcast group call release response (MCPTT client – MCPTT server) 43
10.6.2.3 Group call within one MCPTT system 43
10.6.2.3.1 Group call models 43
10.6.2.3.1.1 Pre-arranged group call 43
10.6.2.3.1.2 Chat group call 48
10.6.2.3.2 Exiting group call due to de-affiliation 52
10.6.2.4 Group call involving groups from multiple MCPTT systems 53
10.6.2.4.1 Group call for temporary groups across multiple MCPTT systems 53
10.6.2.4.1.1 Group call setup 53
10.6.2.4.1.2 Group call release 56
10.6.2.4.2 Group call for temporary group formed by group regroup procedure involving multiple MCPTT systems via trusted mode 57
10.6.2.4.3 Group call for an MCPTT group defined in the partner MCPTT system 59
10.6.2.4.3.1 Group call setup procedure – initiating side 59
10.6.2.4.3.2 Group call setup – terminating side 60
10.6.2.4.4 Merging of groups involving multiple MCPTT systems 60
10.6.2.5 Broadcast group call 61
10.6.2.5.1 General 61
10.6.2.5.2 Common broadcast group call procedure 62
10.6.2.5.2.1 Group-broadcast group call procedure 62
10.6.2.5.2.2 Group-broadcast group call procedure when a subordinate group has an on-going MCPTT emergency group call 64
10.6.2.5.2.3 Group-broadcast group call release procedure 65
10.6.2.5.3 Temporary group – broadcast group call procedure 66
10.6.2.6 Emergency and imminent peril procedures 68
10.6.2.6.1 MCPTT emergency group call 68
10.6.2.6.1.1 MCPTT emergency group call commencement 68
10.6.2.6.1.2 MCPTT group call upgraded to an MCPTT emergency group call 70
10.6.2.6.1.3 MCPTT emergency group call cancel 72
10.6.2.6.2 MCPTT imminent peril group call 74
10.6.2.6.2.1 MCPTT imminent peril group call commencement 74
10.6.2.6.2.2 Imminent peril group call upgrade 76
10.6.2.6.2.3 MCPTT imminent peril group call cancel 77
10.6.2.6.3 MCPTT emergency alert 78
10.6.2.6.3.1 MCPTT emergency alert initiation 79

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

https://standards.iteh.ai/catalog/standards/sist/f835b0db-d9d8-4589-aa01-8c23f20e2c08/etsi-ts-123-379-v14.6.0-2018-07

1 Scope

This document specifies the functional architecture, procedures and information flows needed to support the mission critical push to talk (MCPTT) service. The MCPTT service utilizes the common functional architecture to support MC services over LTE including the common services core defined in 3GPP TS 23.280 [16].Support for both MCPTT group calls and MCPTT private calls operating in on-network and off-network modes of operation is specified.

The corresponding service requirements are defined in 3GPP TS 22.179 [2] and 3GPP TS 22.280 [17].

The present document is applicable primarily to MCPTT voice service using E-UTRAN access based on the EPC architecture defined in 3GPP TS 23.401 [8]. Certain application functions of the MCPTT service such as dispatch and administrative functions could also be supported via non-3GPP access networks but no additional functionality is specified to support non-3GPP access.

The MCPTT service requires preferential handling compared to normal telecommunication services e.g. in support of police or fire brigade including the handling of prioritised MCPTT calls for emergency and imminent threats.

The MCPTT service can be used for public safety applications and also for general commercial applications e.g. utility companies and railways.

In the present document, MCPTT calls between MCPTT users on different MCPTT systems are considered.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

Automatic commencement mode: A mode in which the initiation of the private call does not require any action on the part of the receiving MCPTT user.

First-to-answer call: A call that is started when the first MCPTT user among multiple potential target recipients answers. This call requires the answering MCPTT user to answer manually; automatic answer is not allowed

Group call: A mechanism by which an MCPTT user can make a one-to-many MCPTT transmission to other users that are members of MCPTT group(s).

Group home MCPTT system: The MCPTT system where the MCPTT group is defined.

Group host MCPTT server: The MCPTT server within an MCPTT system that provides centralised support for MCPTT services of an MCPTT group defined in a group home MCPTT system.

Manual commencement mode: A mode in which the initiation of the private call requires the receiving MCPTT user to perform some action to accept or reject the call setup.

MCPTT client: An instance of an MC service client that provides the client application function for the MCPTT service.

MCPTT group: An MC service group configured for MCPTT service.

MCPTT group affiliation: An MC service group affiliation for MCPTT.

MCPTT group de-affiliation: An MC service group de-affiliation for MCPTT.

MCPTT ID: An instance of an MC service ID within the MCPTT service.

MCPTT server: An instance of an MC service server that provides the server application function for the MCPTT service.

On-network MCPTT service: The collection of functions and capabilities required to provide MCPTT via EPS bearers using E-UTRAN to provide the last hop radio bearers.

Pre-selected MCPTT user profile: An instance of the pre-selected MC service user profile for MCPTT.

UE-to-network relay MCPTT service: The collection of functions and capabilities required to provide MCPTT via a ProSe UE-to-network relay using ProSe direct communication paths to provide the last hop radio bearer(s).

For the purposes of the present document, the following terms and definitions given in 3GPP TS 22.179 [2] apply:

Dispatcher
