Foreword 13
Modal verbs terminology 14
1 Scope 15
2 References 16
2.1 Normative references 16
2.2 Informative references 16
3 Definition of terms, symbols and abbreviations 17
3.1 Terms 17
3.2 Symbols 22
3.3 Abbreviations 22
4 Circuit mode reference points 25
5 Packet mode reference points 25
6 Protocol architecture for V+D 25
7 Addressing and identities 25
7.1 Introduction 25
7.2 Subscriber identities 27
7.2.1 General 27
7.2.2 TSI 28
7.2.3 SSI 29
7.2.4 Composition of subscriber identities 29
7.2.5 Allocation principles for subscriber identities 29
7.2.6 Use of subscriber identities 30
7.2.7 NSAP addresses 30
7.2.8 Installation of TSIs 31
7.3 TETRA Management Identity (TMI) 31
7.3.1 General 31
7.3.2 Composition of management identities 31
7.3.3 Use of management identities 32
7.4 Network layer SAP (NSAP) addresses 32
7.4.1 General 32
7.4.2 Static binding 32
7.4.3 Dynamic binding 32
7.4.3.1 General 32
7.4.3.2 Structure and contents of NSAP addresses 32
7.4.3.3 Use of NSAP addresses 33
7.4.3.4 Binding of NSAP addresses 33
7.5 TETRA Equipment Identity (TEI) 33
7.5.1 General 33
7.5.2 Contents of TEI 33
7.5.3 Allocation principles for TEI 34
7.5.4 Use of TEI 34
7.6 Mobile Network Identity (MNI) 34
7.6.1 Contents of MNI 34
7.7 Layer 2 addresses and labels 35
7.7.1 Overview 35
7.7.2 Event labelling 35
7.7.3 Scrambling labelling 35
7.7.4 Use and implementation of layer 2 addresses 35
7.7.4.1 General requirement 35
7.7.4.2 Implementation of event labels 36
7.7.4.3 Implementation of scrambling labels 36

iTeh STANDARD PREVIEW
(standards.iteh.ai)
Full standard:

7.7.5 Use of identities for V+D control channels 36
7.7.6 Labelling of packet channels 37
7.7.6.0 General 37
7.7.6.1 Use of identities for uplink data transfers 37
7.7.6.2 Use of identities for downlink data transfers 37
7.7.7 System information broadcast 37
7.7.8 Reserved value of group address for user information broadcast 37
7.8 Use of individual addresses 38
7.8.0 General 38
7.8.1 Air interface addressing functions 38
7.8.2 Address placement in primitives and PDUs 38
7.8.2.1 Use of ISSI at layer 2 38
7.8.2.2 Use of ITSI/ISSI at layer 3 39
7.8.2.2.1 Void 39
7.8.2.2.2 Use of ITSI/ISSI by CMCE 39
7.8.3 Routing principles 41
7.8.3.1 Routing of intra-TETRA calls (within one TETRA network) 41
7.8.3.2 Routing of inter-TETRA calls (between two TETRA networks) 41
7.8.3.3 Routing of external calls (to/from non-TETRA networks) 41
7.8.4 Address and identity comparison 41
7.9 Addressing in interworking and roaming with other telecommunication networks 41

8 Circuit mode basic services 42

9 Mobility Management (MM) in MS 42

10 MLE mobility scenarios and functionalities 42

11 Technical realization of SDS 42

12 Void 42

13 Void 42

14 General on supplementary services 42

Annex A (informative): Circuit mode reference points 43

A.1 Introduction 43

A.2 Reference configuration 43
A.2.0 Configuration examples 43
A.2.1 Configuration examples of TETRA LMNs 44

A.3 TETRA LMN access 45
A.3.1 MS access 45
A.3.1.0 General 45
A.3.1.1 MS functional groups 45
A.3.1.2 MS access points and reference points 46
A.3.2 Void 46
A.3.3 Inter System Interface (ISI) access 46
A.3.4 Location of TETRA functionality 46
A.3.5 TETRA terminals 46

Annex B (informative): Protocol architecture for V+D 48

B.1 Introduction 48

B.2 Mobile/base protocol architecture 48
B.2.1 Overview 48
B.2.2 Air interface layer 1 48
B.2.3 Air interface layer 2 49
B.2.3.0 General 49
B.2.3.1 Medium Access Control (MAC) 49
B.2.3.2 Logical Link Control (LLC) 51
B.2.4 Air interface layer 3 51

iTeh STANDARD PREVIEW
(standards.iteh.ai)
Full standard:
https://standards.iteh.ai/catalog/standards/sist/273203de-b63e-4288-89c6-21ffcf27f685/etsi-en-300-392-1-v1.6.1-2020-04

B.2.4.0 General 51
B.2.4.1 Mobile/Base Link control Entity (MLE/BLE) 51
B.2.4.2 Sub-Network Access Functions (SNAF) 52
B.2.4.2.0 SNAF General 52
B.2.4.2.1 Mobility Management (MM) 52
B.2.4.2.2 Circuit Mode Control Entity (CMCE) 52
B.2.4.2.3 Packet data handling 53
B.2.4.2.4 TETRA packet data protocol (PDP) 53
B.2.4.2.5 Void 54
B.2.5 Mobile/base protocol stack 54

B.3 Lower Layer Management Entity (LLME) and other layers interaction 55
B.3.1 General description 55

Annex C (informative): Overview of circuit mode basic services 56

C.1 Introduction 56

C.2 Functional groupings in circuit switched mode calls 56
C.2.1 Circuit switched call control, C-plane 56
C.2.2 Circuit switched call, user data, U-plane 56

C.3 Protocols 56
C.3.0 General 56
C.3.1 TNP1 56
C.3.2 Void 56
C.3.3 TNP3 56
C.3.4 TNP4 57
C.3.5 AI1 57
C.3.6 AI2 57
C.3.7 TLC1 57
C.3.8 V.24T 57

C.4 Example configuration 57
C.4.1 MS to MS 57
C.4.2 Void 58
C.4.3 Void 58
C.4.4 MS to MS over ISI 58

Annex D (informative): Individual circuit mode call scenarios 60

D.1 Introduction 60

D.2 Procedures - message trunked systems 60
D.2.1 Call set-up - on/off hook signalling 60
D.2.1.1 Call set-up - on/off hook signalling flow 60
D.2.1.2 Traffic channel assignment 61
D.2.2 Call set-up - direct set-up signalling 61
D.2.2.1 Call set-up - direct set-up signalling flow 61
D.2.2.2 Traffic channel assignment 62
D.2.3 Request-to-transmit 63
D.2.4 Response to request-to-transmit 64
D.2.5 Permission to transmit withdrawn 64
D.2.6 Permission to continue with withdrawn call 64
D.2.7 End of transmission 64
D.2.8 Stop-transmission order 64
D.2.9 Call clearing 65
D.2.9.1 Mobile originated 65
D.2.9.2 SwMI originated 66

D.3 Procedures - transmission trunked systems 66
D.3.1 Call set-up - on/off hook signalling 66
D.3.1.1 Call set-up - on/off hook signalling flow 66
D.3.1.2 Traffic assignment 67
D.3.2 Call set-up - direct set-up signalling 67

iTeh STANDARD PREVIEW
(standards.iteh.ai)
Full standard:
https://standards.iteh.ai/catalog/standards/sist/273203de-b63e-40a8-8fc6-21ffc27685/etsi-en-300-392-1-v1.6.1-2020-04

D.3.2.1 Call set-up - direct set-up signalling flow 67
D.3.2.2 Traffic channel assignment 68
D.3.3 Request-to-transmit 68
D.3.4 Response to request-to-transmit 69
D.3.5 Permission to transmit withdrawn 70
D.3.6 Permission to continue with withdrawn call 70
D.3.7 End of transmission 70
D.3.8 Stop-transmission order 70
D.3.9 Call clearing 70
D.3.9.1 Mobile originated 70
D.3.9.2 SwMI originated 71

D.4 Procedures - quasi-transmission trunked systems 72
D.4.1 Call set-up - on/off hook signalling 72
D.4.1.1 Call set-up - on/off hook signalling flow 72
D.4.1.2 Traffic assignment 73
D.4.2 Call set-up - direct set-up signalling 73
D.4.2.1 Call set-up - direct set-up signalling flow 73
D.4.2.2 Traffic assignment 74
D.4.3 Request-to-transmit 75
D.4.4 Response to request-to-transmit 76
D.4.5 Permission to transmit withdrawn 76
D.4.6 Permission to continue with withdrawn call 77
D.4.7 End of transmission request 77
D.4.8 Stop-transmission order 77
D.4.9 Call clearing 77
D.4.9.1 Mobile originated 77
D.4.9.2 SwMI originated 78

Annex E (informative): Group voice call scenarios 79

E.1 Procedures for message trunked systems 79
E.1.1 General 79
E.1.2 Call set-up 80
E.1.2.1 Call set-up flow 80
E.1.2.2 Traffic channel assignment 81
E.1.3 Request-to-transmit 81
E.1.4 Response to request-to-transmit 82
E.1.5 Permission to transmit withdrawn 82
E.1.6 Permission to continue with withdrawn call 83
E.1.7 End of transmission 83
E.1.8 Stop-transmission order 83
E.1.9 Call clearing 83
E.1.9.1 Mobile originated 83
E.1.9.2 SwMI originated 84

E.2 Procedures for transmission trunked systems 84
E.2.1 General 84
E.2.2 Call set-up 84
E.2.2.1 Call set-up flow 84
E.2.2.2 Traffic channel assignment 85
E.2.3 Request-to-transmit 85
E.2.4 Response to request-to-transmit 86
E.2.5 Permission to transmit withdrawn 87
E.2.6 Permission to continue with withdrawn call 87
E.2.7 End of transmission 87
E.2.8 Stop-transmission order 87
E.2.9 Call clearing 87
E.2.9.1 Mobile originated 87
E.2.9.2 SwMI originated 88

E.3 Procedures for quasi-transmission trunked systems 88
E.3.1 General 88

E.3.2 Call set-up 89
E.3.2.1 Call set-up flow 89
E.3.2.2 Traffic channel assignment 90
E.3.3 Request-to-transmit 90
E.3.4 Response to request-to-transmit 91
E.3.5 Permission to transmit withdrawn 91
E.3.6 Permission to continue with withdrawn call 91
E.3.7 End of transmission 92
E.3.8 Stop-transmission order 92
E.3.9 Call clearing 92
E.3.9.1 Mobile originated 92
E.3.9.2 SwMI originated 93

Annex F (informative): Priority functions for circuit mode services 94

F.1 Introduction 94

F.2 Priority requirements 94
F.2.0 General 94
F.2.1 Access priority 94
F.2.2 Call type priority 95
F.2.3 Queue priority 95
F.2.4 Pre-emptive priority 95
F.2.5 Call retention priority 95
F.2.6 Subscriber priority 95

F.3 Mechanisms for supporting priority 95

F.4 Supplementary service activation and invocation 96

Annex G (informative): Mobility Management (MM) in MS 97

G.1 Introduction 97

G.2 Overview of MM relations and procedures 97

G.3 Stimuli of MM 98
G.3.1 Stimulation through TNMM-SAP 98
G.3.2 Stimulation through LMM-SAP 99
G.3.3 Stimulation through peer MM 99
G.3.4 Other stimulation 99

G.4 Outputs from MM 99
G.4.1 Output through TNMM-SAP 99
G.4.2 Outputs through LMM-SAP 100
G.4.3 Output to peer MM 100

G.5 Database requirement 100

G.6 MM procedures 100
G.6.1 Registration 100
G.6.1.1 Registration at roaming 100
G.6.1.1.1 Implicit registration 100
G.6.1.1.2 Registration area 101
G.6.1.1.3 Registration procedure 101
G.6.1.1.4 Registration with authentication 102
G.6.1.1.5 Registration with identity exchange 103
G.6.1.2 Registration at migration 104
G.6.1.2.1 Registration with identity exchange 104
G.6.1.2.2 Registration with authentication 106
G.6.1.3 Network initiated registration 107
G.6.1.4 TEI request 107
G.6.2 Authentication 107
G.6.2.0 General 107
G.6.2.1 Network initiated authentication 107
G.6.2.2 MS initiated authentication 108

iTeh STANDARD PREVIEW
(standards.iteh.ai)
Full standard:
https://standards.iteh.ai/catalog/standards/sist/2732f3de-b63e-40a8-89c6-21f7fc27685/etsi-en-300-392-1-v1.6.1-2020-04

G.6.3 De-registration 109
G.6.4 Periodic registration 109
G.6.5 Disable/enable 109
G.6.5.1 Temporary disable 109
G.6.5.2 Enable 109
G.6.5.3 Permanently disable 110
G.6.6 Energy economy mode change 110

G.7 Downloading of group identities 110
G.7.0 Overview 110
G.7.1 Add group identity 110
G.7.2 Delete group identity 111
G.7.3 Delete all group identities 111
G.7.4 Report group identities 112

Annex H (informative): MLE mobility scenarios and functionalities 113

H.1 Introduction 113

H.2 Overview 113

H.3 MLE responsibilities 113

H.4 MS-MLE model 114

H.5 MLE functionalities 115
H.5.0 Overview 115
H.5.1 Monitoring of neighbour cells (scenario 1) 116
H.5.2 Scanning of neighbour cells (scenario 2) 116
H.5.3 MM activation of the MS-MLE (scenario 3) 117
H.5.4 Open up MLE service (scenario 4) 118
H.5.5 Close of MLE service (scenario 5) 119
H.5.6 Changing to serving cell (scenario 6) 119
H.5.7 Surveillance of the serving cell (scenario 7) 119
H.5.8 Inviting MM intervention 120
H.5.8.1 No service can be found (scenario 8) 120
H.5.8.2 LA found outside RA (scenario 9) 121
H.5.9 Set-up of MAC broadcast (SYNC + SYSINFO) (scenario 10) 122
H.5.10 Set-up of MLE broadcast (NETWORK) (scenario 11) 122
H.5.11 MM registering (scenario 12) 123
H.5.12 Announce old cell and go-to-channel (scenario 13) 123
H.5.13 Announce old cell (scenario 14) 123
H.5.14 Announce new cell and successful restoration (scenario 15) 124
H.5.15 Announce new cell and restoration failure (scenario 16) 125
H.5.16 Path lost to the serving cell (scenario 17) 125

H.6 Initial cell selection 126
H.6.0 General 126
H.6.1 MLE functions as viewed at the LMM SAP 126
H.6.2 MLE functions 126

H.7 Cell re-selection by roaming 127
H.7.0 General 127
H.7.1 Announced cell re-selection 127
H.7.1.0 Overview 127
H.7.1.1 Announced cell re-selection (type-1) 128
H.7.1.1.0 General 128
H.7.1.1.1 MLE functions as viewed at the LMM SAP 129
H.7.1.1.2 MLE functions as viewed at the LCMC SAP 129
H.7.1.1.3 MLE functions 129
H.7.1.2 Announced cell re-selection (type-2) 130
H.7.1.3 Announced cell re-selection (type-3) 131
H.7.1.3.0 General 131
H.7.1.3.1 MLE functions as viewed at the LCMC SAP 131
H.7.1.3.2 MLE functions 132

H.7.2 Unannounced cell re-selection 132
H.7.3 Undeclared cell re-selection 133
H.7.3.0 General 133
H.7.3.1 MLE functions as viewed at the LMM SAP 133
H.8 MLE service requests during cell re-selection 133
H.8.0 General 133
H.8.1 Undeclared cell re-selection 134
H.9 No MLE recovery 134
H.10 Use of LLC 134
H.10.0 General 134
H.10.1 MS-MLE using the LLC basic link 135
H.10.1.0 General 135
H.10.1.1 Basic link and connectionless MLE service 135
H.10.1.2 Basic link and MLE connections 135
H.10.2 MS-MLE using the LLC advanced link 136
H.10.2.0 General 136
H.10.2.1 Advanced link and connectionless MLE service 136
H.10.2.2 Advanced link and MLE connection 137
Annex I (informative): Void 138
Annex J (informative): Technical realization of SDS and SDS-TL 139
J.1 Introduction 139
J.2 General 139
J.3 Internal organization of the network layer 139
J.3.0 General 139
J.3.1 Service model 140
J.3.2 Network model 140
J.3.2.0 General 140
J.3.2.1 Description of the functional entities 141
J.3.2.2 Description of the relationships between functional entities 143
J.3.3 Allocation of functional entities 143
J.3.3.0 General 143
J.3.3.1 Point-to-point message transfer within one SwMI 143
J.3.3.2 Point-to-multipoint message transfer within one SwMI 144
J.3.3.3 Point-to-point message transfer within two SwMI 144
J.3.3.4 Point-to-multipoint message transfer within two SwMI 144
J.3.3.5 Point-to-point message transfer via an outgoing gateway 145
J.3.3.6 Point-to-point message transfer via an incoming gateway 145
J.3.3.7 Point-to-multipoint message transfer via an outgoing gateway 145
J.3.3.8 Point-to-multipoint message transfer via an incoming gateway 145
J.4 Protocol architecture 146
J.4.0 General 146
J.4.1 MS protocol stack 146
J.4.2 BS protocol stack 147
J.5 Addressing 147
J.5.1 Uplink addressing on the air interface 147
J.5.2 Downlink addressing on the air interface 148
J.6 Services provided by the air interface protocol 148
J.7 Lower layer services used 149
J.7.1 MLE primitives used in the MS and the LS 149
Annex K (informative): General on supplementary services 150
K.1 Introduction 150
K.2 General 150

L.5.2 Protocol stacks at R2 reference point 161
L.5.3 Protocol stacks at R4 reference point 162

Annex M (informative): Quality of Service (QoS) 163

M.1 Introduction 163

M.2 Quality of network service 163
M.2.0 General 163
M.2.1 Determination of quality of network service 163

iTeh STANDARD PREVIEW

M.2.1.0 General 163
M.2.1.1 Connection oriented quality of network service 164
M.2.1.2 Connectionless quality of network service 164
M.2.2 QoS negotiation and non-negotiation 164
M.2.3 QoS parameter set for connection oriented services 164
M.2.3.1 Summary 164
M.2.3.2 NC establishment delay 165
M.2.3.3 NC establishment failure probability 165
M.2.4 Throughput (User information transfer rate) 165
M.2.4.1 Throughput for constant delay services 165
M.2.4.2 Throughput for variable delay services 166
M.2.5 Transit delay 166
M.2.5.1 Transit delay for constant delay services 166
M.2.5.2 Transit delay for voice services 166
M.2.5.3 Transit delay for variable delay services 166
M.2.6 Residual error rate 167
M.2.7 Transfer failure probability 167
M.2.8 NC resilience 167
M.2.8.0 Overview 167
M.2.8.1 NC release delay 168
M.2.8.1.1 NC release delay at the peer user 168
M.2.8.1.2 NC release delay at the invoking user 168
M.2.8.2 NC release failure probability 168
M.2.8.3 NC protection 168
M.2.8.4 NC priority 169
M.2.9 Maximum acceptable cost 169
M.2.10 Air interface parameters 169
M.2.10.0 General 169
M.2.10.1 Duration of interruption of user traffic due to call restoration 169
M.2.10.2 Call restoration success rate 169
M.2.10.3 Interruption of user traffic due to slot stealing 169
M.2.11 Supplementary service parameters 170
M.2.11.1 Maximum time to activate a supplementary service 170
M.2.12 Connection oriented QoS negotiation 170
M.2.13 QoS parameter set for connectionless services 170
M.2.13.1 Summary 170
M.2.13.2 Transit delay 171
M.2.13.3 Protection from unauthorized access 171
M.2.13.4 Cost determinants 171
M.2.13.5 Residual error probability 171
M.2.13.6 Priority 172
M.2.13.7 Connectionless QoS negotiation 172
M.3 Applicability of QoS parameters to TETRA services 172
Annex N (normative): TETRA type approval code information element 174
N.1 Encoding of the TAC information element 174
N.2 Application for the TAC value 174
Annex O (normative): TETRA final assembly code (FAC) information element 177
O.1 Encoding of the FAC information element 177
O.2 Application for the FAC value 177
O.3 WEB page contents for FAC data base 177
Annex P (normative): TETRA electronic serial number (ESN) information element 180
P.1 Encoding of the ESN information element 180
P.2 Usage of the ESN 180

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This draft European Standard (EN) has been produced by ETSI Technical Committee TETRA and Critical Communications Evolution (TCCE), and is now submitted for the combined Public Enquiry and Vote phase of the ETSI standards EN Approval Procedure.

The present document is part 1 of a multi-part deliverable covering the Terrestrial Trunked Radio (TETRA); Voice plus Data (V+D), as identified below:

Part 1: "General network design";

Part 2: "Air Interface (AI)";

Part 3: "Interworking at the Inter-System Interface (ISI)":

Part 4: "Gateways basic operation";

Part 5: "Peripheral Equipment Interface (PEI)";

Part 7: "Security";

Part 9: "General requirements for supplementary services";

Part 10: "Supplementary services stage 1";

Part 11: "Supplementary services stage 2";

Part 12: "Supplementary services stage 3";

Part 13: "SDL model of the Air Interface (AI)";

Part 14: "Protocol Implementation Conformance Statement (PICS) proforma specification";

Part 15: "TETRA frequency bands, duplex spacings and channel numbering";

Part 16: "Network Performance Metrics";

Part 17: "TETRA V+D and DMO specifications";

Part 18: "Air interface optimized applications";

Part 19: "Interworking between TETRA and Broadband systems".
