Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. www.iso.org/directives

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. www.iso.org/patents

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 17, *Steel*, Subcommittee SC 20, *General technical delivery conditions, sampling and mechanical testing methods*, **PREVIEW**

This third edition cancels and replaces the second edition (ISO 404:1992), which has been technically revised.

ISO 404:2013 https://standards.iteh.ai/catalog/standards/sist/93f4414b-9c07-45cc-8d7f-8dac0ae464af/iso-404-2013

Steel and steel products — General technical delivery requirements

1 Scope

This International Standard specifies the general technical delivery requirements for all steel products covered by ISO 6929, with the exception of steel castings and powder metallurgical products.

ISO 10474 describes the inspection documents to be used.

Where the delivery requirements agreed upon for the order or specified in the appropriate product or material standard differ from the general technical delivery requirements defined in this International Standard, then it is the requirements agreed for ordering or specified in the appropriate product or material standard that apply.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies. RD PREVIEW

ISO 377, Steel and steel products - Location and preparation of samples and test pieces for mechanical testing

3 Definitions

For the purposes of this document, the definitions in ISO 4948-1, ISO 4948-2 and ISO 6929, and the following apply.

3.1

inspection

activities such as measuring, examining, testing, gauging one or more characteristics of a product or service and comparing these with specified requirements to verify conformity

3.2

testing

any operation or action to determine one or more properties or characteristics of a material or product

3.3

non-specific inspection

inspection carried out by the manufacturer in accordance with his own procedures, to verify that products made by the same manufacturing process meet the requirements of the order

Note 1 to entry: The products inspected and tested can be different from the products actually supplied.

3.4

specific inspection

inspection carried out, before delivery, in accordance with the product specification, on the products being supplied or on test units of which the products are part, to verify that these products meet the requirements of the order

3.5

inspection representative

one or more individuals who is/are either the manufacturer's authorized inspection representative(s), independent from the manufacturing department; the purchaser's authorized representative; or the inspector(s) designated by a third party

3.6

test unit

number of pieces or the tonnage of products to accept or reject together, on the basis of the verification tests carried out on sample products in accordance with the requirements of the product standard or order

Note 1 to entry: See Figure 1.

Note 2 to entry: This term is sometimes referred to in other International Standards as "inspection lot" or "batch".

Note 2 to entry: This term is sometimes referred to in other International Standards as "inspection lot" or "batch". (standards.iteh.ai)

3.7

sample product

item (a sheet, for example) selected from a test un<u>it(fot)inspe</u>ction and/or testing https://standards.iteh.ai/catalog/standards/sist/93f4414b-9c07-45cc-8d7f-

Note 1 to entry: See <u>Figure 1</u>.

8dac0ae464af/iso-404-2013

3.8

sample

sufficient quantity of material taken from the sample product for the purpose of producing one or more test pieces

Note 1 to entry: See Figure 1.

Note 2 to entry: In certain cases, the sample may be the sample product itself.

3.9

rough specimen

part of the sample having undergone mechanical treatment, followed by heat treatment where appropriate, for the purpose of producing test pieces

Note 1 to entry: See Figure 1.

3.10

test piece

part of the sample, with specified dimensions, machined or unmachined, brought to a required condition for submission to a given test

Note 1 to entry: See <u>Figure 1</u>.

Note 2 to entry: In certain cases, the test piece may be the sample itself or the rough specimen.

3.11

cast (heat) analysis

chemical analysis representative of the cast (heat) determined by the steelmaker

3.12

product analysis

chemical analysis carried out on the product

3.13

sequential testing

group or series of tests from which the average and individual results are used to demonstrate that the requirements of the order and/or product standard have been satisfied

3.14

manufacturer

organization that manufactures the respective products according to the requirements of the order and to properties specified in the referenced product specification

3.15

intermediary

organization that is supplied with products by the manufacturers and that then, in turn, supplies them without further processing or after processing without changing the properties specified in the purchase order and referenced product specification

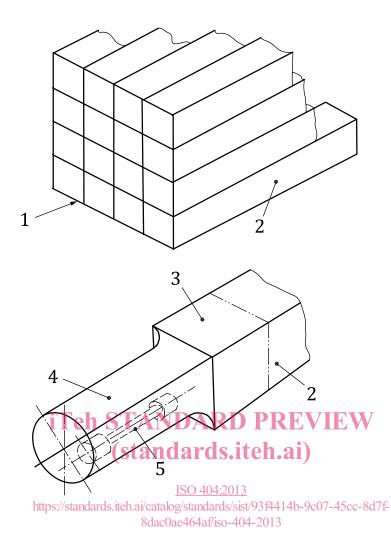

Note 1 to entry: Examples of intermediaries can be steel service centres and stockists.

4 Information to be supplied by the purchaser

4.1 The purchaser shall select the steel type, the shape of the product and the dimensions, taking the intended processing and use into account. The purchaser may consider the manufacturer's advice in making the choice.

The order shall provide all the information necessary for describing the product and its characteristics, and also details concerning delivery such as standards/sist/93f4414b-9c07-45cc-8d7f-

- a) mass, length, area, number of pieces to be delivered;
- b) the product form (it can be a number referring to a drawing, for example);
- c) the nominal dimensions;
- d) the tolerances on the characteristics in items a) and c);
- e) the designation of the steel;
- f) delivery condition (type of heat treatment, surface treatment etc.);
- g) specific requirements for surface and/or internal quality (see 7.4);
- h) the type of inspection document required and, where not specified in the product standard, the inspection and testing requirements (see <u>Clause 8</u>);
- i) where applicable, the application of the quality management systems given in ISO 9001;
- j) requirements for marking, packaging and loading;
- k) any optional (supplementary) requirements provided for by the product standard.

Key

- 1 test unit
- 2 sample product
- 3 sample
- 4 rough specimen
- 5 test piece

Figure 1 — Examples of terms defined in <u>Clause 3</u>

- **4.2** The information in <u>4.1</u> shall be specified either
- a) by reference to one or more International Standards, or
- b) in the absence of an International Standard, by stipulation of the characteristics and conditions required.

If, in an order, reference is made to a given International Standard without specifying its edition date, this reference shall be interpreted as being the edition current at the date of order acknowledgement.

5 Manufacturing process

The manufacturing process shall be left to the discretion of the manufacturer, unless otherwise agreed at the time of ordering or otherwise specified in the product standard.

NOTE The manufacturing process covers all operations up to the delivery of the product.

6 Supply by an intermediary

The intermediary shall submit to the purchaser, the manufacturer's inspection documents in accordance with ISO 10474.

This documentation from the manufacturer shall be accompanied by suitable means of identification of the product, in order to ensure the traceability between the product and the documentation (see <u>Clause 10</u>).

If the intermediary has changed the dimensions of the product, the intermediary shall supply an additional document for these particular new conditions. This also applies to all special requirements given in the order and not defined in the manufacturer's documentation.

Any organization which during processing changes the metallurgical state of the product is considered as a product manufacturer.

7 Requirements

7.1 General

The product shall comply with the requirements of the order.

The manufacturer shall carry out appropriate process control, inspection and testing to verify that the delivery complies with the requirements of the order, irrespective of the type of inspection document required (see <u>Clause 8</u>). Teh STANDARD PREVIEW

7.2 Chemical composition (standards.iteh.ai)

Requirements concerning the chemical composition shall be considered to refer to the cast (heat) analysis unless they refer expressly to the product analysis 4b-9c07-45cc-8d7f-

8dac0ae464af/iso-404-2013

7.3 Mechanical properties

7.3.1 Effect of dimensions

Where, in the product standard, the mechanical properties are specified by dimensional categories such as thickness, diameter etc., the dimension that shall be considered is the nominal dimension of the product at the prescribed location for taking samples for mechanical tests.

7.3.2 Applicable material condition

In the absence of any specification in the order or the product standard, the mechanical properties relate to the as-delivered condition of the products.

7.3.3 Assessment of impact energy value

Where an impact-energy value is specified, without any further information, it shall be taken to represent the average value of those individual tests that shall be assessed as described in 8.3.4.2.

7.4 Surface and internal quality

7.4.1 General

All products shall have a finish appropriate to the manufacturing route. Minor surface and internal imperfections that can occur under normal manufacturing conditions shall not be grounds for rejection.

Detailed requirements referring to these characteristics shall, where appropriate, be agreed upon at the time of enquiry and order, by reference to the appropriate International Standard (or another relevant standard if no International Standard exists).

NOTE The following International Standards on surface qualities exist: ISO 7788^[4], ISO 9443^[5] (and any others that are relevant).

7.4.2 Detection of defects

The use of special techniques (radiography, ultrasonics, magnetic detection, etc.) to detect defects, as well as the number of products being tested per test unit and the procedures for interpreting the results, when required, shall be as specified in the product standard or as agreed at the time of ordering.

7.4.3 Removal of discontinuities

Surface discontinuities may be removed by mechanical or thermal means, provided that the dimensions and properties of the product remain within the limit specified in either the order, product standard, dimensional standard or surface quality standard.

Unless otherwise stated in the product standard thermal means to remove discontinuities are accepted.

7.4.4 Repairs by welding

Where there is no provision in the product standard or order, the purchaser may permit local repairs by welding. **iTeh STANDARD PREVIEW**

NOTE Regulations can prohibit repair by welding (Standards.iteh.ai)

8 Inspection and testing

<u>ISO 404:2013</u>

https://standards.iteh.ai/catalog/standards/sist/93f4414b-9c07-45cc-8d7f-

8.1 Types of inspection documents and inspection and testing

When ordering, the purchaser shall state which type of inspection document [see 4.1 h)], if any, is required (see ISO 10474), thereby indicating the required type of inspection and testing: non-specific or specific. If non-specific inspection and testing is required, see 8.2. If specific inspection and testing is required, see 8.3.

8.2 Non-specific inspection and testing

The purchaser may require that, on the basis of non-specific inspection and testing, a declaration of compliance with the order "2.1" or a test report "2.2" (see ISO 10474) shall be furnished by the manufacturer. When the purchaser requires a test report, he shall indicate for which product characteristics the test results shall be given in this document, if the product standard does not cover such detail.

8.3 Specific inspection and testing

8.3.1 General

8.3.1.1 Information to be supplied

When the purchaser specifies that compliance with the requirements of the order shall be verified by specific inspection and testing, the enquiry and order shall cover

- the type of document required, for example an inspection certificate of type <u>3.1</u>, or <u>3.2</u> (see ISO 10474) if not specified in the product standard;
- the testing frequency (see 8.3.2);

- the requirements for sampling and for the preparation of the samples and test pieces (see <u>8.3.3</u>);
- the identification of test units, if any;
- the test methods (see 8.3.4);
- the address of the inspection body in the case of inspection certificates and inspection reports validated also by external inspectors.

8.3.1.2 Place of specific inspection and testing

If the necessary facilities are not available at the manufacturer's works, the inspection and testing shall be carried out at another place agreed between the two parties, or at an establishment certified by a recognized organization, preferably in the country of manufacture. In the latter case, the products shall not be delivered prior to the receipt of the test results by the manufacturer.

8.3.1.3 Submission for specific inspection and testing

Where appropriate, the inspection representative shall be informed, by the manufacturer or his authorized representative, of the date of availability of part or all of the consignment for specific inspection and testing. Reference shall be made to the order. The manufacturer and the inspection representative shall agree upon the time and date of the inspection and testing, in order to avoid interference with the normal operation of the works and time for the delivery of the relevant documentation.

8.3.1.4 Rights and duties of the inspection representative

In order to carry out the agreed inspection and testing, the inspection representative shall have free access, at the agreed time, to the places where the products to be tested/inspected are stored. The inspection representative shall have the right to be present during the selection of the samples, preparation (machining and treatment) of test places and during the tests. The inspection representative shall observe all the relevant instructions in force in the manufacturer's works and especially the safety rules. The works shall have the right to have him accompanied by one of their representatives. The testing/inspection procedures shall be carried out so that disturbance of the normal run of production is minimized.

8.3.1.5 Traceability during testing

During the test operations, the manufacturer shall be able to provide traceability between the sample products, samples and test pieces and the test units to which they belong.

8.3.2 Testing frequency

8.3.2.1 Formation of test units

For each type of test, the test unit shall be specified in the product standard or the order. Such specifications are normally based on the indication of whether the test unit shall be composed only of products of

- the same cast (heat), and/or
- the same casting sequence, and/or
- the same rolling unit, and/or
- the same heat treatment condition or heat treatment batch; and/or
- the same product form; and/or
- the same thickness or diameter range; and
- whether the maximum size of the test unit is restricted by mass or number of pieces.
