Hygieneanforderungen

This European Standard was approved by CEN on 3 February 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 13886:2005) has been prepared by CEN /TC 153 "Food processing machinery — Safety and hygiene specifications", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2005, and conflicting national standards shall be withdrawn at the latest by September 2005.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of an EC Directive.

For relationship with this EC Directive, see the informative Annex ZA, which is an integral part of this document.

It is one of a series of standards on the design and construction of machines used in the catering, as:

- vegetable cutting machines;
- catering attachments for machines having an auxiliary drive hub;
- food processors and blenders;
- hand-held blenders and whisks;
- beam mixers;
- salad dryers;
- vegetable peelers;
- cooking kettles equipped with powered stirrer and/or mixer.

ITeH STANDARD PREVIEW
(standards.iteh.ai)
<https://standards.iteh.ai/catalog/standards/sist/85b3d078-dcc9-4157-9e14-dfeeee20a9f/sist-en-13886-2005>

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

The use of cooking kettles equipped with powered stirrer and/or mixer involves various mechanical and other risks.

Their extensive use in numerous countries justifies the need of a standard covering both safety and the hazards to food hygiene arising from machine design complementary to EN 1672-2 which states hygiene requirements for food processing machines.

This document is a type C standard as stated in EN ISO 12100-1.

The machinery concerned and the extent to which hazards, hazardous situations and events are covered are indicated in the scope of this document.

When provisions of this type C standard are different from those that are stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards, for machines that have been designed and built according to the provisions of this type C standard.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 13886:2005](#)

<https://standards.iteh.ai/catalog/standards/sist/85b3d078-dcc9-4157-9e14-dfeffee20a9f/sist-en-13886-2005>

1 Scope

1.1 This document specifies the safety and hygiene requirements for the design and manufacture of cooking kettles equipped with powered stirrer and/or mixer taking account of installation, operation, cleaning, removal of jammed food, feeding, maintenance and changing the tools.

The cooking kettles equipped with powered stirrer and/or mixer are used from catering to small scale-food industry to cook, cool and mix all cold or hot food. They permit addition of ingredients during processing without stopping the machine.

NOTE The kettle bowl can be fixed or equipped with a manually or power operated tilting mechanism.

In the text that follows, the term "cooking kettles" is used to refer to the equipment covered by this document.

This document covers cooking kettles equipped with powered stirrer and/or mixer having technical performances in accordance with the following:

- thermal energy supply can be electricity, gas (see EN 125 and EN 161), steam or heat-conducting fluid;
- capacity of the kettle: from 30 l to 600 l (nominal volume);
- maximum power rating 80 kW;
- speed of the powered stirrer: 10 rpm to 200 rpm;
- maximum speed of the mixer: 3 000 rpm.

The machines covered by this document are not intended to be cleaned with a high pressure water jet.

This document deals with all significant hazards, hazardous situations and events relevant to cooking kettles, when they are used as intended and under the conditions foreseen by the manufacturer (see Clause 4).

1.2 This document does not apply to:

- domestic machines (i.e. capacity of kettles less than 30 l);
- planetary mixers which are covered by EN 454;
- food processors which are covered by EN 12852;
- cooking kettles without powered stirrer and/or mixer having a manual tilting kettle.

1.3 This document does not deal with hazard due to the pressure on machines with a double jacket.

NOTE Depending on the pressure and the volume of the double jacket, the cooking kettle may fall under the scope of the Pressure Equipment Directive (97/23/EC), for the EU market.

1.4 Noise is not considered to be a significant hazard for these machines. This does not mean that the manufacturer of these machines is absolved from reducing noise and making a noise declaration. Therefore a noise test code is included in Annex A.

1.5 Vibrations are not considered to be a significant hazard for these machines and no test method is given.

1.6 Possible hazards relevant to gas supply and heating are not dealt with in this document.

NOTE The equipment may fall under the Gas Appliances Directive (90/396/CEE), for the EU market.

1.7 This document is not applicable to the machines which are manufactured before the date of publication of this document by CEN.

3 Terms, definitions, symbols and description**3.1 Terms, definitions and symbols**

For the purposes of this document, the terms and definitions given in EN ISO 12100-1:2003 and the following apply.

3.1.1**nominal volume** V_n

manufacturer's declared intended working volume (in litres)

3.1.2**total volume** V_t

total volume (in litres) that the bowl can physically contain

3.1.3**stirrer**

tool which operates with slow rotating speed (from 10 rpm to 200 rpm) for blending

3.1.4**mixer**

tool which operates with high rotating speed (up to 3 000 rpm) for cutting

NOTE In the text "powered stirrer" means "powered stirrer and/or mixer" unless otherwise stated.

3.2 Description

There are two main different types of cooking kettles with powered stirrer and/or mixer. The basic differences are in the location of the drive mechanism of the tool relative to the bowl (see Figure 1).

For those machines, two types are defined:

Type 1: Kettles with the top powered stirrer driven by a motor in an enclosure above the kettle through the lid.

The top powered stirrer can be used in either of two kettles mounted together by turning the drive enclosure between the two kettles and locking it into the centre position of one of the bowls or can be either fixed for use in one kettle, or it can be movable among several kettles e.g. using a rail in the ceiling (see Figures 1.1 a), 1.1 b) and 1.1 c));

Type 2: Kettles with the bottom powered stirrer driven by a shaft through the bowl either in the bottom of the kettle bowl (see Figures 1.2 a), 1.2 b) and 1.2 c)).

Figure 1.1 a) — Example 1 of two combined top powered kettles with a powered stirrer body which can be turned between the kettles

Figure 1.1 b) — Example 2 of two combined top powered kettles with a powered stirrer body which can be turned between the kettles

Figure 1.1 c) — Example of a single top powered kettle with a powered stirrer

4 List of significant hazards

4.1 General

This clause contains all the significant hazards, hazardous situations and events, as far as they are dealt with in this document, identified by a risk assessment based upon EN 1050 as significant for cooking kettles, and which require action to eliminate or reduce the risk.

Before using this standard, it is important to carry out a risk assessment of the lifting and tilting machine to check that its significant hazards are identified in this clause.

4.2 Mechanical hazards

4.2.1 Access to the danger zones

Mechanical hazards arise from the risk of contact with the moving tool, the tilting device and the power transmission.

The hazards may arise by:

- Zone 1: The powered stirrer: gap between the edge of the powered stirrer and the vessel and fitting parts;
Hazard of cutting, crushing, trapping and impact with hands, fingers and arm.
The mixer: direct access to the moving tool.
Hazard of cutting and crushing arms, hand and fingers.
- Zone 2: The power transmission to the tool: risk of getting drawn-in by the rotating transmission shaft;
Hazard of being drawn-in, crushing and entanglement of parts of the body.
- Zone 3: The tilting function: between the moving kettle bowl and fixed parts of the kettle;
Hazard of crushing parts of the body.
- Zone 4: The tilting function: free movement of the kettle due to failure of the tilting mechanism;
Hazard of impact with the body.
- Zone 5: The cover: falling down of the lid and/or accessories;
Hazard of crushing arms, hands and fingers.
