5.2.2.1 Conformance requirements	27
5.2.3 Configurations	27
5.2.3.1 Conformance requirements	27
5.2.4 Interaction with other interfaces	27
5.2.4.1 Conformance requirements	27

5.3	Physical characteristics.....	27
5.3.1	Temperature range for card operations	27
5.3.1.1	Conformance requirements	27
5.3.2	Contacts	28
5.3.2.1	Provision of contacts	28
5.3.2.1.1	Conformance requirements.....	28
5.3.2.2	Contact activation and deactivation	28
5.3.2.2.1	Conformance requirements.....	28
5.3.2.2.2	Test case 1: activation of SWP additionally to other interfaces	28
5.3.2.2.3	Test case 2: activation of SWP in low power mode	29
5.3.2.3	Interface activation.....	29
5.3.2.3.1	Conformance requirements.....	29
5.3.2.3.2	Test case 1: SWP initial activation in full power mode - normal procedure	32
5.3.2.3.3	Test case 2: SWP Initial activation - no resume	32
5.3.2.3.4	Test case 3: SWP initial activation in full power mode - corrupted ACT_SYNC frame (repeat the last frame).....	32
5.3.2.3.5	Test case 4: SWP initial activation in full power mode - no ACT_SYNC frame (repeat the last frame).....	33
5.3.2.3.6	Test case 5: SWP initial activation failed in full power mode - corrupted ACT_SYNC frame (multiple).....	33
5.3.2.3.7	Test case 6: SWP initial activation failed in full power mode - no ACT_SYNC frame (multiple).....	34
5.3.2.3.8	Test case 7: SWP Initial activation in full power mode - corrupted ACT_READY frame (repeat last frame).....	35
5.3.2.3.9	Void.....	35
5.3.2.3.9a	Test case 8a: SWP Initial activation in full power mode - no ACT_READY frame (repeat last frame)	35
5.3.2.3.10	Test case 9: SWP initial activation failed in full power mode - corrupted ACT_READY frame (multiple).....	36
5.3.2.3.11	Test case 10: SWP initial activation failed in full power mode - no ACT_READY frame (multiple).....	37
5.3.2.3.12	Test case 11: SWP initial activation in low power mode	37
5.3.2.3.13	Test case 12:SWP initial activation in low power mode - corrupted ACT_SYNC frame (repeat the last frame)	38
5.3.2.3.14	Test case 13: SWP initial activation in low power mode - no ACT_SYNC frame (repeat the last frame).....	38
5.3.2.3.15	Test case 14: SWP initial activation failed in low power mode - corrupted ACT_SYNC frame (multiple).....	39
5.3.2.3.16	Test case 15: SWP initial activation failed in low power mode - no ACT_SYNC frame (multiple).....	40
5.3.2.3.17	Test case 16: SWP subsequent activation in full power mode	40
5.3.2.3.18	Void.....	41
5.3.2.3.19	Test case 18: SWP initial activation in full power mode - send ACT frames in wrong order, ACT_READY frame after activation (repeat the last frame)	41
5.3.2.4	Behaviour of a UICC in a terminal not supporting SWP	41
5.3.2.4.1	Conformance requirements.....	41
5.3.2.5	Behaviour of terminal connected to a UICC not supporting SWP	42
5.3.2.5.1	Conformance requirements.....	42
5.3.2.5.2	Void.....	42
5.3.2.6	Inactive contacts.....	42
5.3.2.6.1	Conformance requirements.....	42
5.4	Electrical characteristics	42
5.4.1	Operating conditions.....	42
5.4.1.1	Voltage and current definitions	42
5.4.1.2	Supply voltage classes.....	42
5.4.1.3	V _{CC(C1)} low power mode definition.....	42
5.4.1.3.1	Conformance requirements.....	42
5.4.1.3.2	Test case 1: current provided in low power mode, no spikes	43
5.4.1.3.3	Test case 2: current provided in low power mode, with spikes	43
5.4.1.4	Signal S1	45
5.4.1.4.1	Conformance requirements.....	45
5.4.1.4.2	Test case 1: communication with S2 variation in full power mode.....	45

5.4.1.4.3	Test case 2: communication with S2 variation in low power mode	46
5.4.1.5	Signal S2	46
5.4.1.5.1	Definition.....	46
5.4.1.5.2	Operating current for S2.....	46
5.5	Physical transmission layer	48
5.5.1	S1 Bit coding and sampling time	48
5.5.1.1	Conformance requirements	48
5.5.1.2	Test case 1: S1 waveforms, default bit duration.....	48
5.5.1.2.1	Test execution.....	48
5.5.1.2.2	Initial conditions.....	49
5.5.1.2.3	Test procedure	49
5.5.1.3	Test case 2: S1 waveforms, extended bit durations.....	49
5.5.1.3.1	Test execution.....	49
5.5.1.3.2	Initial conditions.....	49
5.5.1.3.3	Test procedure	50
5.5.2	S2 switching management	50
5.5.2.1	Conformance requirements	50
5.5.3	SWP interface states management	51
5.5.3.1	Conformance requirements	51
5.5.3.2	Test case 1: SWP states and transitions, communication.....	52
5.5.3.2.1	Test execution.....	52
5.5.3.2.2	Initial conditions.....	52
5.5.3.2.3	Test procedure	52
5.5.3.3	Test Case 2: SWP resume after upper layer indication that the UICC requires no more activity on this interface	52
5.5.3.3.1	Test execution.....	52
5.5.3.3.2	Initial Conditions	53
5.5.3.3.3	Test procedure	53
5.5.4	Power mode states/transitions and Power saving mode	53
5.5.4.1	Conformance requirements	53
5.5.4.2	Test case 1: power provided in full power mode	53
5.5.4.2.1	Test execution.....	53
5.5.4.2.2	Initial conditions.....	53
5.5.4.2.3	Test procedure	54
5.5.4.3	Test case 2: switching from full to low power mode	54
5.5.4.3.1	Test execution.....	54
5.5.4.3.2	Initial conditions.....	54
5.5.4.3.3	Test procedure	54
5.5.4.4	Test case 3: switching from low to full power mode	54
5.5.4.4.1	Test execution.....	54
5.5.4.4.2	Initial conditions.....	54
5.5.4.4.3	Test procedure	55
5.6	Data link layer	55
5.6.1	Overview	55
5.6.2	Medium Access Control (MAC) layer.....	55
5.6.2.1	Bit order	55
5.6.2.1.1	Conformance requirements.....	55
5.6.2.2	Structure	55
5.6.2.2.1	Conformance requirements.....	55
5.6.2.2.2	Test case 1: interpretation of incorrectly formed frames - SHDLC RSET frames	56
5.6.2.2.3	Test case 2: interpretation of incorrectly formed frames - SHDLC I-frames	56
5.6.2.3	Bit stuffing	57
5.6.2.3.1	Conformance requirements.....	57
5.6.2.3.2	Test case 1: behaviour of CLF with bit stuffing in frame.....	57
5.6.2.4	Error detection.....	57
5.6.2.4.1	Conformance requirements.....	57
5.6.3	Supported LLC layers	58
5.6.3.1	LPDU structures.....	58
5.6.3.1.1	Conformance requirements.....	58
5.6.3.2	Interworking of the LLC layers.....	58
5.6.3.2.1	Conformance requirements.....	58
5.6.3.2.2	Test case 1: ignore ACT LLC frame reception after the SHDLC link establishment	58

5.6.3.2.3	Test case 2: ignore ACT LLC frame reception in CLT session.....	59
5.6.3.2.4	Test case 3: CLT session during SHDLC communication	59
5.6.3.2.5	Test case 4: closing condition of CLT session whereas SHDLC link has been established before CLT session.....	59
5.6.4	ACT LLC definition	60
5.6.4.1	ACT LPDU structure	60
5.6.4.1.1	Conformance requirements.....	60
5.6.4.2	SYNC_ID verification process.....	60
5.6.4.2.1	Conformance requirements.....	60

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Smart Card Platform (SCP).

The contents of the present document are subject to continuing work within TC SCP and may change following formal TC SCP approval. If TC SCP modifies the contents of the present document, it will then be republished by ETSI with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 0 early working draft;
 - 1 presented to TC SCP for information;
 - 2 presented to TC SCP for approval;
 - 3 or greater indicates TC SCP approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

The present document is part 1 of a multi-part deliverable covering the Test specification for the Single Wire Protocol (SWP) interface, as identified below:

Part 1: "Terminal features";

Part 2: "UICC features".

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The present document defines test cases for the terminal relating to Single Wire Protocol (SWP). SWP is the communication interface between the UICC and a contactless frontend (CLF) as specified in ETSI TS 102 613 [1].

The aim of the present document is to ensure interoperability between the terminal and the UICC independently of the respective manufacturer, card issuer or operator.

iTeh STANDARD PREVIEW

Full standard:
<https://standards.iteh.ai/catalog/standards/sist/9016321f-8d94-4eeb-974f-503a20185944/etsi-ts-102-694-1-v11.0.0-2019-05>

1 Scope

The present document covers the minimum characteristics which are considered necessary for the terminal in order to provide compliance to ETSI TS 102 613 [1].

The present document specifies the test cases for:

- the physical layer of the interface CLF - UICC;
- the electrical interface of the CLF;
- the initial communication establishment CLF - UICC;
- the data link layer.

Test cases for the UICC relating to ETSI TS 102 613 [1] and test cases for the host controller interface (HCI) covering both terminal and UICC are out of scope of the present document.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <https://docbox.etsi.org/Reference/>.

- In the case of a reference to a TCS CP document, a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] ETSI TS 102 613: "Smart Cards; UICC - Contactless Front-end (CLF) Interface; Part 1: Physical and data link layer characteristics".
- [2] ETSI TS 102 221: "Smart Cards; UICC-Terminal interface; Physical and logical characteristics".
- [3] ETSI TS 102 600: "Smart Cards; UICC-Terminal interface; Characteristics of the USB interface".
- [4] ETSI TS 102 622: "Smart Cards; UICC - Contactless Front-end (CLF) Interface; Host Controller Interface (HCI)".
- [5] ISO/IEC 14443-3: "Cards and security devices for personal identification -- Contactless proximity objects -- Part 3: Initialization and anticollision".
- [6] ISO/IEC 14443-4: "Cards and security devices for personal identification -- Contactless proximity objects -- Part 4: Transmission protocol".
- [7] ISO/IEC 9646-7: "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 7: Implementation Conformance Statements".
- [8] ISO/IEC 18092: "Information technology -- Telecommunications and information exchange between systems -- Near Field Communication -- Interface and Protocol (NFCIP-1)".
- [9] ISO/IEC 13239: "Information technology -- Telecommunications and information exchange between systems -- High-level data link control (HDLC) procedures".

- [10] ISO/IEC 14443-2: "Identification cards -- Contactless integrated circuit cards -- Proximity cards - Part 2: Radio frequency power and signal interface".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

- In the case of a reference to a TC SCP document, a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

Not applicable.

3 Definition of terms, symbols, abbreviations and formats

3.1 Terms

For the purposes of the present document, the terms given in ETSI TS 102 613 [1] and the following apply:

corrupted frame: SWP frame which is well-formed with respect to the MAC layer, with the exception that the CRC16 in the frame does not match with the CRC16 result calculated over the payload

NOTE: This frame has at least 1 byte payload. Used by the TE to represent the situation where the DUT receives a corrupted frame (unless otherwise specified).

nomenclature used for tests involving SHDLC LLC:

For SHDLC link establishment, the following definitions apply:

- ES transmits RSET:
 - RSET(): RSET frame without payload.
 - RSET(Ws=w): RSET frame with one byte payload.
 - RSET(Ws=w, SREJ=S): RSET frame with two bytes payload. For the endpoint capabilities byte, SREJ=0 represents the value 0x00, SREJ=1 represents the value 0x01.
- ES receives RSET:
 - RSET: RSET frame with any valid payload.
 - RSET(): RSET frame without payload.
 - RSET(Ws=w): RSET frame with one byte payload.
 - RSET(Ws=w, SREJ=S): RSET frame with two bytes payload. For the endpoint capabilities byte, SREJ=0 represents the value 0x00, SREJ=1 represents the value 0x01.

For every calculation on NS0_T, NS0_S or NR in the test procedures use modulo 8.

non-occurrence RQ: RQ which has been extracted from ETSI TS 102 613 [1], but which indicates a situation which should never occur

NOTE: The consequence is that such RQs cannot be explicitly tested.

representative SWP frame exchange procedure: sequence of SWP frames exchanged between TE and DUT

NOTE 1: Used by the TE to cause SWP communication traffic where needed in test procedures. This sequence has to provide the following characteristics, unless otherwise specified or more precisely stated in test procedures:

- Amount of data exchanged between TE and DUT at least 500 byte (with respect to the MAC layer), valid for both directions.
- Some half-duplex SWP communication.
- Some full-duplex SWP communication.
- Frame transmission started by the TE while the DUT yet sends a frame.
- Exchanged data have to enforce occurrence of some bit stuffing in both directions.
- Some variation of frame length sent from the TE.

NOTE 2 The DUT provider have to provide sufficient information to allow this procedure to be defined.

user: describes any logical or physical entity which controls the test equipment in a way that it is able to trigger activities of the DUT

3.2 Symbols

For the purposes of the present document, the symbols given in ETSI TS 102 613 [1] and the following apply:

The characters x, y, z represent any values for the current test, unless otherwise specified

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI TS 102 613 [1] and the following apply:

(U)SIM	Universal Subscriber Identity Module
ACT	ACTivation protocol
CLF	ContactLess Frontend
CLT	ContactLess Tunnelling
CRC	Cyclic Redundancy Code
DUT	Device under test
FFS	For further study
FSC	Frame Size for proximity Card
HCI	Host Controller Interface
HCP	Host Controller Protocol
LLC	Logical Link Control
NAA	Network Access Application
NR	Number of next information frame to Receive
NS	Number of next information frame to Send
PCD	Proximity Coupling Device
RQ	Conformance requirement
SHDLC	Simplified High Level Data Link Control
SWIO	Single Wire protocol Input/Output
SWP	Single Wire Protocol
T	Terminal, i.e. the DUT (shortcut used only in test procedure tables)
TE	Test Equipment
TSN	Time Slot Number
WS	Window Size
