Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 67, *Materials, equipment and offshore structures for petroleum, petrochemical and natural gas industries*.

ISO 16904:2016

<https://standards.iteh.ai/catalog/standards/sist/fdbf0d71-fa98-4b3d-a0c7-ed1d27f9d843/iso-16904-2016>

Petroleum and natural gas industries — Design and testing of LNG marine transfer arms for conventional onshore terminals

1 Scope

This International Standard specifies the design, minimum safety requirements and inspection and testing procedures for liquefied natural gas (LNG) marine transfer arms intended for use on conventional onshore LNG terminals, handling LNG carriers engaged in international trade. It can provide guidance for offshore and coastal operations. It also covers the minimum requirements for safe LNG transfer between ship and shore.

Although the requirements for power/control systems are covered, this International Standard does not include all the details for the design and fabrication of standard parts and fittings associated with transfer arms.

This International Standard is supplementary to local or national standards and regulations and is additional to the requirements of ISO 28460.

This International Standard needs not be applied to existing facilities.

2 Normative references (standards.iteh.ai)

The following referenced documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 3452-1, *Non-destructive testing — Penetrant testing — Part 1: General principles*

ISO 4406, *Hydraulic fluid power — Fluids — Method for coding the level of contamination by solid particles*

ISO 9934-1, *Non-destructive testing — Magnetic particle testing — Part 1: General principles*

ISO 10474:2013, *Steel and steel products — Inspection documents*

ISO 10497, *Testing of valves — Fire type-testing requirements*

ISO 17636-1, *Non-destructive testing of welds — Radiographic testing — Part 1: X- and gamma-ray techniques with film*

ISO 17636-2, *Non-destructive testing of welds — Radiographic testing — Part 2: X- and gamma-ray techniques with digital detectors*

ISO 28460:2010, *Petroleum and natural gas industries — Installation and equipment for liquefied natural gas — Ship-to-shore interface and port operations*

IEC 60034-5, *Rotating electrical machines — Part 5: Degrees of protection provided by the integral design of rotating electrical machines (IP code) — Classification*

IEC 60079-0, *Explosive atmospheres — Part 0: Equipment — General requirements*

IEC 60079-1, *Explosive atmospheres — Part 1: Equipment protection by flameproof enclosures “d”*

IEC 60079-2, *Explosive atmospheres — Part 2: Equipment protection by pressurized enclosures “p”*

IEC 60079-14, *Explosive atmospheres — Part 14: Electrical installations design, selection and erection*

IEC 60079-18, *Explosive atmospheres — Part 18: Equipment protection by encapsulation “m”*

IEC 60079-25, *Explosive atmospheres — Part 25: Intrinsically safe electrical systems*

IEC 60529, *Degrees of protection provided by enclosures (IP Code) and IEC 60529/A1&A2, Amendment 1&2*

IEC 61508 (all parts), *Functional safety of electrical/electronic/programmable electronic safety-related systems*

IEC 62305-3, *Protection against lightning — Part 3: Physical damage to structures and life hazard*

ASME B16.5, *Pipe Flanges and Flanged Fittings*

ASME Boiler and Pressure Vessel Code Section IX: *Welding and Brazing Qualifications*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

apex swivel

articulated, fluid-carrying joint located between the *inboard arm* (3.20) and *outboard arm* (3.32)

Note 1 to entry: See [Figure B.2](#).

Note 2 to entry: It provides *luffing* (3.26) of the outboard arm relative to the inboard arm.

3.2

attitude

various modes of use and/or location of the *transfer arm* (3.59) (i.e. manoeuvring, stowed, connected, hydrostatic test, and maintenance)

Note 1 to entry: The transfer arm can take several positions for each attitude.

3.3

base riser

riser

vertical assembly which bolts to the loading platform and supports the articulated assembly of the *transfer arm* (3.59)

Note 1 to entry: See [Figure B.2](#).

Note 2 to entry: Sometimes referred to as “standpost”.

3.4

bottom swivel

accommodates *pitching* (3.35) motion of *LNG carrier* (3.25) and is located adjacent to *presentation flange* (3.37) in horizontal part of *TSA* (3.60)

Note 1 to entry: See [Figure B.2](#).

3.5**brinelling**

any permanent indentation in *swivel* (3.55) or *structural bearing* (3.50) raceways caused by excessive loading of balls or rollers

3.6**cargo manifold**

pipe assembly mounted onboard *LNG carrier* (3.25) to which the *presentation flange* (3.37) or *QCDC* (3.39) of the *transfer arm* (3.59) is connected

Note 1 to entry: See [Figure B.2](#).

3.7**cavitation**

formation and collapse of bubbles in a liquid when the pressure falls to or below the liquid vapour pressure; the collapse releases energy, sometimes with an audible sound and vibration

Note 1 to entry: Such low pressures occur in high velocity zones such as the inner radius of elbows, or at places with variations of diameters.

3.8**clash**

any contact during design operational conditions, or as a result of an emergency separation, between any part of a *transfer arm* (3.59) and:

- adjacent transfer arm while both arms are operating or one arm is operating and the other arm is stowed [e.g. the *counterweights* (3.11)],
- adjacent section of the same transfer arm [e.g. *triple swivel assembly* (3.60) and *outboard arm* (3.32)];
- loading platform equipment [e.g. *counterweight* (3.11) and piping or valves]

3.9**contact angle**

α

angle between the plane of the *swivel joint* (3.55) or *structural bearing* (3.50) balls or rollers and the centre of contact at the ball or roller raceway interface

3.10**conventional onshore LNG terminal**

LNG exporting or receiving terminal that is located on-shore and that has a marine transfer arms for the loading or unloading of *LNG carriers* (3.25) in a harbour or other sheltered coastal location

3.11**counterweight**

system of weights used to balance the *inboard arm* (3.20) and *outboard arm* (3.32) assemblies

Note 1 to entry: Some *transfer arms* (3.59) have a single counterweight for this function and others have multiple counterweights.

3.12**design pressure**

pressure for which the *transfer arm* (3.59) is designed

Note 1 to entry: See [Table A.1](#).

3.13**design temperature**

range of temperatures for which the *transfer arm* (3.59) is designed

Note 1 to entry: See [Table A.1](#).

3.14

drift

longitudinal and/or lateral displacement of the *LNG carrier* (3.25) under the influence of environmental forces

Note 1 to entry: See also *surge fore* (3.52) or *aft* (3.51) and *sway* (3.54).

3.15

emergency release system

ERS

system that provides a positive means of quick release of *transfer arms* (3.59) and safe isolation between the *LNG carrier* (3.25) and shore, following a predefined procedure including an *emergency shutdown* (ESD) (3.16)

Note 1 to entry: See [Figure B.2](#).

3.16

emergency shutdown

ESD

method that safely and effectively stops the transfer of LNG and vapour between the *LNG carrier* (3.25) and shore

3.17

freeboard

vertical distance between the ship's deck and the water level at the manifold location

Note 1 to entry: See [Table A.3](#) and [Figure A.1](#).

3.18

free wheel

ability of a hydraulically operated *transfer arm* (3.59) when connected to a *LNG carrier* (3.25) to follow freely without hydraulic restraint the vertical and horizontal motions of the LNG carrier's manifold (draft changes and *sway* (3.54) and surge motions)

3.19

heave

vertical motion of the *LNG carrier* (3.25) due to wave action

Note 1 to entry: See [Table A.4](#) and [Figure A.2](#).

3.20

inboard arm

product-carrying pipe and any structural members contained between the *apex swivel* (3.1) and the *trunnion swivel* (3.61)

Note 1 to entry: See [Figure B.2](#).

3.21

included angle

angle formed between *inboard arm* (3.20) and *outboard arm* (3.32)

Note 1 to entry: See [Figure B.2](#).

Note 2 to entry: The maximum and minimum included angles are left to the transfer arm manufacturer.

Note 3 to entry: The included angle in the stowed position of the *transfer arms* (3.59) is such, that the arms are parked with the *triple swivel assembly* (3.60) behind the berthing line.

3.22**insulating flange**

electrical insulating system, usually dedicated, which is installed in the lower end of the *outboard arm* (3.32) or in the vertical part of the *triple swivel assembly* (3.60)

Note 1 to entry: Its purpose is to prevent stray currents from causing an arc at the *LNG carrier's* (3.25) flange as the *transfer arm* (3.59) is connected or disconnected.

3.23**jack**

permanent, adjustable load-carrying mechanism potentially installed in the *triple swivel assembly* (3.60) to transfer a portion of the *arm* (3.59) fluid weight to the deck instead of the *LNG carrier's* (3.25) manifold

Note 1 to entry: See [Figure B.2](#).

3.24**jetty control centre**

control centre situated on or adjacent to the jetty primarily to control and/or monitor the *transfer arms* (3.59)

Note 1 to entry: Sometimes referred to as “jetty control room” or “local control room”.

3.25**LNG carrier****LNGC**

tank ship designed for the carriage of LNG

3.26**luffing**

rotary motions of the *inboard arm* (3.20) and *outboard arm* (3.32) in the vertical plane

Note 1 to entry: See [Figure B.2](#).

iteh STANDARD PREVIEW
(standards.iteh.ai)
ISO 16904:2016
<https://standards.iteh.ai/catalog/standards/sist/fdbf0d71-fa98-4b3d-a0c7-ed1d279d843/iso-16904-2016>

3.27**main hydraulic unit****MHU**

hydraulic unit that generates hydraulic power to ensure the normal operation and emergency release sequence of the arms

3.28**manifold setback**

horizontal distance between the board side of *LNG carrier* (3.25) and the face of *cargo manifold* (3.6)

Note 1 to entry: See [Table A.3](#) and [Figure A.1](#).

3.29**manifold spacing**

horizontal distance between two adjacent *cargo manifold* (3.6) flange axes

Note 1 to entry: See [Table A.3](#) and [Figure A.1](#).

3.30**middle swivel**

accommodates *yawing* (3.63) and surge of *LNG carrier* (3.25) and is located between *top swivel* (3.57) and *bottom swivel* (3.4) in vertical part of *TSA* (3.60)

Note 1 to entry: See [Figure B.2](#).

3.31**operating envelope**

volume in which *presentation flange(s)* (3.37) of a (group of) *transfer arm(s)* (3.59) is (are) required to operate

3.32

outboard arm

product-carrying pipe and any structural members contained between the *apex swivel* (3.1) and the *triple swivel assembly* (3.60)

Note 1 to entry: See [Figure B.2](#).

3.33

owner

designated agent

company or group of companies for whose use the *transfer arms* (3.59) are installed, responsible for the safe design and construction of the installation

3.34

pantograph system

system for transmitting balancing loads from the *outboard arm* (3.32) to the *counterweight(s)* (3.11)

Note 1 to entry: The system comprises an assembly of linkages and pinned connections, or a cable and sheaves system (respectively, “rigid link pantograph” and “cables and sheaves pantograph”).

3.35

pitch

rotation of the *LNG carrier* (3.25) around transversal horizontal axis

Note 1 to entry: See [Table A.4](#) and [Figure A.2](#).

3.36

powered emergency release coupling

PERC

powered device to provide a means of quick release of the *transfer arms* (3.59) when such action is required only as an emergency measure

iTeh STANDARD PREVIEW
(standards.iteh.ai)
ISO 16904:2016
<https://standards.iteh.ai/catalog/standards/sist/fdbf0d71-fa98-4b3d-a0c7-ed1d279d843/iso-16904-2016>

3.37

presentation flange

transfer arm (3.59) flange for connection to either the *cargo manifold* (3.6) or *spool piece* (3.47)

Note 1 to entry: See [Figure B.2](#).

3.38

product

fluid transferred using *transfer arms* (3.59)

Note 1 to entry: Fluids are LNG, NG or LN₂.

3.39

quick connect disconnect coupler

QCDC

coupler

manual or hydraulic mechanical device used to connect the *transfer arm* (3.59) to the *cargo manifold* (3.6) without employing bolts

Note 1 to entry: See [Figure B.2](#).

3.40

remote pendant control

remote control

device to facilitate the fine manoeuvring operation of the *transfer arms* (3.59) from a remote location (e.g. *LNG carrier's* (3.25) *cargo manifold* (3.6) area)

Note 1 to entry: The system can use a trailing wire or radio-controlled system.

3.41**riser and trunnion swivel assembly**

fluid carrying system consists of *riser swivel* (3.43), *trunnion swivel* (3.61) and elbows and mounted on top of the *base riser* (3.3)

Note 1 to entry: See [Figure B.2](#).

3.42**riser flange**

transfer arm (3.59) flange for connection to LNG piping

Note 1 to entry: See [Figure B.2](#).

3.43**riser swivel**

swing joint in the *riser and trunnion swivel assembly* (3.41) which permits *slewing* (3.46) of the *transfer arm* (3.59)

Note 1 to entry: See [Figure B.2](#).

3.44**roll**

rotation of *LNG carrier* (3.25) around longitudinal horizontal axis

Note 1 to entry: See [Table A.4](#) and [Figure A.2](#).

3.45**safety integrity level****SIL**

statistical representations of the integrity of the safety instrumented system when a process demand occurs

ISO 16904:2016

Note 1 to entry: See [Clause 6](#). <https://standards.iteh.ai/catalog/standards/sist/fdbf0d71-fa98-4b3d-a0c7-ed1d279d843/iso-16904-2016>

3.46**slew**

horizontal, rotary motion of the *transfer arm* (3.59) around the *base riser* (3.3)

Note 1 to entry: See [Figure B.2](#).

3.47**spool piece**

short length of pipe for the purpose of matching the *cargo manifold* (3.6) to the *presentation flange* (3.37) or *QCDC* (3.39)

Note 1 to entry: Sometimes referred to as “adaptor” or “short distance piece”.

3.48**spotting line**

pre-determined location on the jetty used by the *LNG carrier* (3.25) when berthing to align with the LNG carrier vapour manifold

Note 1 to entry: See [Figure A.4](#).

3.49**stress analysis**

detailed calculation of the structural loading in the *transfer arm* (3.59) and *cargo manifold* (3.6) for various positions and attitudes to check the integrity of the transfer arm for the service intended

3.60**triple swivel assembly****TSA**

group of three *swivels* (3.55) and elbows located at the end of the *outboard arm* (3.32)

Note 1 to entry: See [Figure B.2](#).

3.61**trunnion swivel**

swing joint in the *riser and trunnion swivel assembly* (3.41) which permits the *inboard arm* (3.20) to rotate around the horizontal axis

Note 1 to entry: See [Figure B.2](#).

3.62**uninterrupted power supply****UPS**

back-up of the electrical supply system providing power to critical control and safety systems so that the plant can be kept in safe conditions

3.63**yaw**

rotation of the *LNG carrier* (3.25) around vertical axis

Note 1 to entry: See [Table A.4](#) and [Figure A.2](#).

iTeh STANDARD PREVIEW

4 Abbreviated terms

(standards.iteh.ai)

For the purposes of this document, the following abbreviated terms apply.

CPMS	constant position monitoring system
ERS	emergency release system
ESD	emergency shutdown
FL	fluid load
LNG	liquefied natural gas
LNGC	liquefied natural gas carrier
LN ₂	liquefied nitrogen gas
MHU	main hydraulic unit
NDE	non destruction examination
NG	natural gas
N ₂	nitrogen gas
OBE	operating basis earthquake
PERC	powered emergency release coupling
PL	pressure load
PQR	performance quality records
QCDC	quick connect disconnect coupler
