

Designation: F959M – 07

# Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use With Structural Fasteners (Metric)<sup>1</sup>

This standard is issued under the fixed designation F959M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope\*

1.1 This specification covers the requirements for compressible-washer-type direct tension indicators capable of indicating the achievement of a specified minimum bolt tension in a structural bolt.

1.2 Two types of direct tension indicators in nominal diameter sizes M16 through M36 are covered:

1.2.1 *Type 8.8*—direct tension indicators for use with Specification **A325M** bolts, and

1.2.2 *Type 10.9*—direct tension indicators for use with Specification **A490M** bolts.

1.3 Direct tension indicators are intended for installation under either a bolt head or a hardened washer. (See Research Council on Structural Connections: Specification for Structural Joints Using ASTM A325 or A490 Bolts.)

1.4 The following precautionary statement pertains only to the test methods portions, Section 12, and Appendix X1 of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

## 3. Terminology

3.1 *Definitions of Terms Specific to This Standard:*

3.1.1 *compressible-washer-type direct tension indicator, n*—a washer-type element inserted under the bolt head or hardened washer, having the capability of indicating the achievement of a required minimum bolt tension by the degree of direct tension indicator plastic deformation. Hereafter referred to as *direct tension indicator*.

## 4. Ordering Information

4.1 Orders for direct tension indicators under this specification shall include the following:

4.1.1 Quantity (number of pieces);

4.1.2 Name of product (direct tension indicator);

4.1.3 Size, that is, nominal diameter;

4.1.4 ASTM designation and year of issue (if not specified, current issue shall be used);

4.1.5 Type required, 8.8 or 10.9 (see 1.2);

4.1.6 Coating type, if required (see 5.4);

4.1.7 Source inspection, if required (Section 13);

4.1.8 Certificates of compliance or test reports, if required (Section 15); and

4.1.9 Any special requirements.

## 5. Materials and Manufacture

5.1 Steel used in the manufacture of direct tension indicators shall be produced by the basic-oxygen or electric-furnace process.

5.2 *Design:*

<sup>3</sup> Available from Research Council on Structural Connections at www.boltcouncil.org.

\*A Summary of Changes section appears at the end of this standard

5.2.1 Direct tension indicators shall have a configuration produced by extrusion, punching, pressing, or similar forming, to permit a measurable decrease in thickness when placed in compression.

5.2.2 The design shall be such that the degree of plastic deformation shall indicate the tension in a tightened structural bolt.

5.3 *Heat Treatment*—The process used for heat treatment of DTIs shall be through-hardening by heating to a temperature above the upper transformation temperature, quenching in a liquid medium, and then retempering by reheating to a suitable temperature to attain desired mechanical/performance properties.

5.4 *Protective Coatings:*

5.4.1 Unless otherwise specified, the direct tension indicators shall be furnished “plain,” with the “as fabricated” surface finish without protective coatings.

5.4.2 When “zinc coated” is specified, the direct tension indicators shall be zinc coated by the mechanical deposition process in accordance with the requirements of Class 55 of Specification B695.

5.4.3 When “baked epoxy” is specified, the epoxy shall be 0.025 to 0.05 mm thick applied over the zinc coating specified in 5.4.2. The epoxy shall not flake off exposed surfaces during installation.

5.4.4 Other coatings are to be used only when approved by the direct tension indicator manufacturer.

6. Chemical Composition

6.1 The direct tension indicators shall conform in chemical composition to the limits given in Table 1.

6.2 Product analysis may be made by the purchaser from finished direct tension indicators representing each lot. The chemical composition shall conform to the requirements given in Table 1, Product Analysis.

7. Performance Requirements

7.1 *Compression Loads*—When compressed to the gap specified in Table 2, the compression load shall conform to the requirements specified in Table 3.

TABLE 2 Direct Tension Indicator Gap for Compression Load Testing

Direct Tension Indicator Finish	Gap, mm	
	Specification 8.8	Specification 10.9
Plain finish	0.4	0.4
Mechanically galvanized	0.4	...
Baked epoxy coating on Mechanically deposited zinc	0.4	...

TABLE 3 Acceptable Range of Compression Loads

Direct Tension Indicator Size (Nominal Diameter, mm)	Compression Load Range, kN	
	Type 8.8	Type 10.9
M16	91–109	114–131
M 20	142–170	179–206
M 22	176–211	221–254
M 24	205–246	257–296
M 27	267–320	334–384
M 30	326–391	408–469
M 36	475–570	595–684

8. Dimensions

8.1 The direct tension indicators shall conform to the dimensions specified in Table 4.

9. Workmanship, Finish, and Appearance

9.1 The direct tension indicators shall be commercially smooth and free of injurious material or manufacturing defects that would affect their performance.

10. Number of Tests and Retests

10.1 *Responsibility:*

10.1.1 The direct tension indicator manufacturer shall inspect each lot of direct tension indicators prior to shipment in accordance with the quality assurance procedures described in 10.2.

10.1.2 The purpose of a lot inspection testing program is to ensure that each lot conforms to the requirements of this specification. For such a plan to be fully effective, it is essential that the purchaser continue to maintain the identification and integrity of each lot following delivery until the product is installed in its service application.

TABLE 1 Chemical Composition Requirements

Element	Composition, %			
	Heat Analysis		Product Analysis	
	Type 8.8 and 10.9	Type 8.8-3 and Type 10.9-3	Type 8.8 and Type 10.9	Type 8.8-3 and Type 10.9-3 <sup>A</sup>
Carbon	0.30–0.55	...	0.27–0.58	...
Manganese	0.50–0.90	...	0.47–0.93	...
Phosphorus, max	0.04	0.040	0.048	0.045
Sulfur, max	0.050	0.050	0.053	0.055
Silicon	0.15–0.35	0.15–0.35	0.13–0.37	0.13–0.37
Chromium	...	0.45–0.65	...	0.42–0.68
Nickel	...	0.25–0.45	...	0.22–0.48
Copper	...	0.25–0.45	...	0.22–0.48

<sup>A</sup>Weathering steel DTIs are also permitted to be manufactured from any of the Type 3 steels in the chemical composition sections of Specifications A325M and F436M.
