Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSL identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

FRENCH STANDARD FRENCH AND SANDARD SAN

1 Scope

The present document specifies end-to-end Key Performance Indicators (KPIs) for the 5G network and network slicing.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.
- [1] 3GPP TR 21.905: "Vocabulary for 3GPP Specifications".
- [2] Void.
- [3] ITU-T Recommendation E.800: "Definitions of terms related to quality of service".
- [4] 3GPP TS 24.501: "Non-Access-Stratum (NAS) protocol for 5G System (5GS); Stage 3".
- [5] 3GPP TS 28.552: "Management and orchestration; 5G performance measurements".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

kbit kilobit (1000 bits) RTT Round Trip Time

4 End to end KPI concept and overview

The following KPI categories are included in the present document:

- Accessibility (see the definition in [3]).
- Integrity (see the definition in [3]).
- Utilization

For future update of the document it will also include:

- Retainability (see the definition in [3]).
- Availability.
- Mobility.

5 KPI definitions template

- a) Long name (Mandatory): This field shall contain the long and descriptive name of the KPI.
- b) Description (Mandatory): This field shall contain the description of the KPI. Within this field it should be given if the KPI is focusing on network or user view.
- c) Logical formula definition (Mandatory):

The logical formula should describe what the KPI formula is in logical way. The description of the formula is given in a written textual format without any measurement or counter names. E.g. a success rate KPI's logical formula is the successful event divided by all event.

d) Physical formula definition (Optional):

This field should contain the KPI formula description using the 3GPP defined counter names. This field can be used only if the counters needed for the KPI formula is defined in any of the 3GPP TS for performance measurements (TS 28.552 [5]).

e) Measurement names used for the KPI (Optional):

This clause should list the measurement names used for the KPI.

This clause can be filled out only when the underlying measurements for the KPI formula can be defined, i.e. physical formula definition is available.

f) KPI Object (mandatory)

This clause shall describe the object of the KPI. The object of the KPI is one or some of the following:

- NR and NG-RAN;
- 5GC
- 5GS
- g) KPI category (mandatory)

This clause contains the classification of the KPI into one of the KPI categories listed in clause 4.

h) Unit of the KPI (mandatory)

This clause describes the unit of the KPI. The unit can be one of the following:

- percentage:
- time interval (second or millisecond or microsecond);
- Erlang;
- kbit/s.
- i) Type of the KPI (Mandatory)

This clause describes the type of the KPI. The KPI type can be one of the following:

- MEAN: This KPI is produced to reflect a mean measurement value based on a number of sample results.
- RATIO: KPI is produced to reflect the percentage of a specific case occurrence to all the cases.
- CUM: This KPI is produced to reflect a cumulative measurement which is always increasing.
- j) Remark: (Optional)

This field is for any further information that is needed for the KPI definition.

Here it is proposed to define any additional information that would be needed for the KPI definition; e.g. the definition of a call in UTRAN.

6 End to end KPI definitions

6.1 KPI Overview

The KPI categories defined in [2] will be reused by the present document.

6.2 Accessibility KPI

6.2.1 Registered Subscribers of Network and Network Slice Instance through AMF

- a) Registered Subscribers of Single Network Slice Instance through AMF.
- b) This KPI describe the total number of subscribers that are registered to a network slice instance.
- c) This KPI is obtained by counting the subscribers in AMF that are registered to a network slice instance.

d)
$$RSSNSI = \sum_{AMF} RegisteredSubNbrMean$$

- e) RegisteredAMFSubNbrMean
- f) 5GS
- g) Accessibility
- h) Interger
- i) CUM

6.2.2 Registered Subscribers of Network and Network Slice Instance through UDM

- a) Registered Subscribers of Single Network Slice Instance through UDM
- b) This KPI describe the total number of subscribers that are registered to a network slice instance.
- c) This KPI is corresponding to the measurement RM.RegisteredSubUDMNbrMean that counts subscribers registered in UDM..
- d) $RSSNSI = Re\ gisteredSubUDMNbrMean$
- e) RegisteredSubUDMNbrMean
- f) 5GS
- g) Accessibility
- h) Integer
- i) CUM

Registration success rate of one single network slice 6.2.3 instance

- a) Registration success rate of one single network slice instance.
- b) This KPI describes the ratio of the number of successfully performed registration procedures to the number of attempted registration procedures for the AMF set which related to one single network slice instance and is used to evaluate accessibility provided by the end-to-end network slice instance and network performance.
- c) This KPI is obtained by successful registration procedures divided by attempted registration procedures.

d)

$$RSR = \frac{\sum_{Type} AMF.5GSRegisSucc.Type}{\sum_{Type} AMF.5GSRegisAtt.Type} *100\%$$

e) AMF.5GSRegisAtt.Type AMF.5GSRegisAttachSucc.Type

Above measurements with subcounter . Type should be defined in 3GPP TS 24.501 [4]. NOTE:

- f) 5GS
- g) Accessibility
- h) Percentage
- i) RATIO

Integrity KPI 6.3

6.3.1

6.3.1.0

- KPI categories

 a) End-to-end latency of 5G networks in 22 and is used to every and is used to every an interest of the contraction of the contrac b) This KPI describes the end to end packet transmission latency through the RAN, CN, and TN part of 5G network and is used to evaluate utilization performance of the end-to-end network.
- c) This KPI is the RTT end to end latency of UE IP packets transmitted from UE to the N6 interface in the 5G network. The N6 interface is the reference point between UPF and DN.
- d) E2ELatency
- e) End-to-end latency
- f) 5GS
- g) Integrity
- h) Time interval (millisecond)
- i) MEAN

6.3.1.1 Downlink latency in gNB-DU

a) Downlink latency for IP packets through gNB in split scenario.
