Supersedes EN ISO 7250-1:2010

English Version

Basic human body measurements for technological design - Part 1: Body measurement definitions and landmarks (ISO 7250-1:2017)

Définitions des mesures de base du corps humain pour la conception technologique - Partie 1: Définitions des mesures du corps et repères (ISO 7250-1:2017)

Wesentliche Maße des menschlichen Körpers für die technische Gestaltung - Teil 1: Körpermaßdefinitionen und -messpunkte (ISO 7250-1:2017)

This European Standard was approved by CEN on 9 September 2017.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

iTeh STANDARD PREVIEW

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN ISO 7250-1:2017) has been prepared by Technical Committee ISO/TC 159 “Ergonomics” in collaboration with Technical Committee CEN/TC 122 “Ergonomics” the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2018 and conflicting national standards shall be withdrawn at the latest by March 2018.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN ISO 7250-1:2010.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 159, *Ergonomics*, Subcommittee SC 3, *Anthropometry and biomechanics*.

This second edition cancels and replaces the first edition (ISO 7250-1:2008), which has been technically revised.

A list of all parts in the ISO 7250 series can be found on the ISO website.

Basic human body measurements for technological design —

Part 1: Body measurement definitions and landmarks

1 Scope

This document provides a description of anthropometric measurements which can be used as a basis for comparison of population groups and for the creation of anthropometric databases (see ISO 15535). The basic list of measurements specified in this document is intended to serve as a guide for ergonomists who are required to define population groups and apply their knowledge to the geometric design of the places where people work and live. In addition, the list serves as a basis for extracting one- and two-dimensional measurements from three-dimensional scans (specified in ISO 20685). It serves as a guide on how to take anthropometric measurements, but also gives information to the ergonomist and designer on the anatomical and anthropometrical bases and principles of measurement which are applied in the solution of design tasks.

This document is intended to be used in conjunction with national or international regulations or agreements to ensure harmony in defining population groups and to allow comparison of anthropometric data among member bodies. In its various applications, it is anticipated that the basic list will be supplemented by specific additional measurements. [Annex A](#) shows the correspondence of dimensions described here with their use in ISO 14738 and ISO 15534.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

population group

group of people having some common environment or activity

Note 1 to entry: These groups may be as diverse as geographically defined populations or specified age groups.

3.2

anterior

ventral

towards the front of the body

ISO 7250-1:2017(E)

3.3

bi

prefix denoting connection with, or relation to, each of two symmetrical paired parts

EXAMPLE Biacromial, bitragion.

3.4

biceps femoris

one of the large *posterior* (3.16) muscles in the thigh of the leg

3.5

deltoid muscle

large muscle on the *lateral* (3.11) border of the upper arm in the shoulder region

3.6

distal

away from the main mass of the body

3.7

Frankfurt plane

standard horizontal plane at the level of the left tragion and the left orbitale (infraorbitale) when the midsagittal plane of the head is held vertically

3.8

gluteal fold

skin furrow between the buttock and the thigh

3.9

grip axis

axis of the fist corresponding with the longitudinal axis of a rod held in the hand

[SIST EN ISO 7250-1:2018](https://standards.iteh.ai/catalog/standards/sist/9820487d-fe67-4b6c-86ad-3205d2e20b1b/sist-en-iso-7250-1-2018)

3.10

inferior**caudal**

away from the head

<https://standards.iteh.ai/catalog/standards/sist/9820487d-fe67-4b6c-86ad-3205d2e20b1b/sist-en-iso-7250-1-2018>

3.11

lateral

towards the side of the body

3.12

longitudinal axis of the foot

imagined centre line of the foot, connecting a point between the ankle bones, and the tip of the second toe

Note 1 to entry: It is subject to interpretation because of the great variability in the shape of the foot.

3.13

medial

towards the midline of the body

3.14

metacarpal

pertaining to the long bones of the hand between the carpals (wrist bones) and the *phalanges* (3.15)

3.15

phalanx**phalanges**, plural

bone(s) of the fingers or toes

3.16**posterior
dorsal**

towards the back of the body

3.17**process**

marked prominence of a bone

3.18**proximal**

towards the main mass of the body

3.19**radial**

referring to the long bone in the forearm on the thumb side

3.20**sagittal**

pertaining to the anteroposterior (front to back) median plane of the body (midsagittal), or to a plane parallel to the median (parasagittal) plane

3.21**superior****cranial**

towards the head, towards the top

3.22**thyroid cartilage**

prominent cartilage on the *anterior* (3.2) surface of the neck

3.23**ulnar**

referring to the long bone in the forearm on the little finger side

4 Measuring conditions and instruments

4.1 Conditions

It is important that the following conditions be documented together with the numerical results of any survey.

Photographs or detailed sketches of measurements and procedures are recommended.

- a) **Clothing of subject:** during measurement, the subject shall be nude or shall wear only minimal clothing and shall be bareheaded and without shoes.
- b) **Support surfaces:** standing surfaces (floors), platforms or sitting surfaces shall be flat, horizontal and not compressible.
- c) **Body symmetry:** for measurements which may be taken on either side of the body, it is recommended that both sides be measured. If this is not possible, it should be indicated on which side the measurement was taken.
- d) **Body posture:** for standing measurements, the posture should generally include looking straight ahead, heels together, upper body relaxed and normal breathing. For sitting postures, the torso is erect, the shoulders relaxed, the subject looks straight ahead and the feet are supported so that the femora are horizontal and parallel to each other. Horizontal femora can be achieved with an adjustable foot platform, or with a series of platforms of varying thickness that can be combined to achieve the desired posture.
