Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

5.4.7 Traffic Redirection 40
5.4.8 Traffic Steering 41
5.4.9 Provisioning of Predefined PCC/ADC Rules 41
5.4.10 Charging 42
5.4.11 (Un)solicited Application Reporting 43
5.4.12 Service Identification for Improved Radio Utilisation for GERAN 44
5.4.13 Transport Level Marking 44
5.5 F-TEID Allocation and Release 44
5.5.1 General 44
5.5.2 F-TEID allocation in the CP function 45
5.5.3 F-TEID allocation in the UP function 45
5.6 PFCP Session Handling 45
5.6.1 General 45
5.6.2 Session Endpoint Identifier Handling 45
5.6.3 Modifying the Rules of an Existing PFCP Session 45
5.7 Support of Lawful Interception 46
5.7.1 General 46
5.7.2 Lawful Interception in EPC 46
5.7.3 Lawful Interception in 5GC 46
5.8 PFCP Association 46
5.8.1 General 46
5.8.2 Behaviour with an Established PFCP Association 47
5.8.3 Behaviour without an Established PFCP Association 48
5.9 Usage of Vendor-specific IE 48
5.10 Error Indication Handling 48
5.11 User plane inactivity detection and reporting 48
5.12 Suspend and Resume Notification procedures 49
5.13 Ethernet traffic (for 5GC) 49
5.13.1 General 49
5.13.2 Address Resolution Protocol or IPv6 Neighbour Solicitation Response by SMF 50
5.13.3 Address Resolution Protocol or IPv6 Neighbour Solicitation Response by UPF 50
5.13.3A Provisioning of MAC addresses and SDF filters in Ethernet Packet Filters 51
5.13.4 Bidirectional Ethernet Filters 51
5.13.5 Reporting of UE MAC addresses to the SMF 51
5.14 Support IPv6 Prefix Delegation 52
5.15 Signalling based Trace (De)Activation 52
5.16 Framed Routing 52
5.17 5G UPF (for 5GC) 52
5.17.1 Introduction 52
5.17.2 Uplink Classifier and Branching Point 52
5.17.3 Data Forwarding during handovers between 5GS and EPS 53

6 Procedures 54
6.1 Introduction 54
6.2 PFCP Node Related Procedures 54
6.2.1 General 54
6.2.2 Heartbeat Procedure 54

B.2 UP Selection Function 190
B.2.1 General 190
B.2.2 SGW-U Selection Function 190
B.2.3 PGW-U Selection Function 191
B.2.4 Combined SGW-U/PGW-U Selection Function 191
B.2.5 TDF-U selection function 192
B.2.6 UP Selection Function Based on DNS 192
B.2.6.1 General 192
B.2.6.2 SGW-U Selection Function Based on DNS 192
B.2.6.3 PGW-U Selection Function Based on DNS 192
B.2.6.4 Combined SGW-U/PGW-U Selection Function Based on DNS 193

Annex C (Informative): Examples scenarios 194
C.1 General 194
C.2 Charging Support 194
C.2.1 Online Charging 194
C.2.1.1 Online Charging Call Flow – Normal Scenario 194
C.2.1.2 Online Charging Call Flow with Credit Pooling 196
C.2.1.2.1 General 196
C.2.1.2.2 Example Call Flow 1 196
C.2.1.2.3 Example Call Flow 2 198

Annex D(Informative): Change history 201

History 204

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

1 presented to TSG for information;

2 presented to TSG for approval;

3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

shall indicates a mandatory requirement to do something

shall not indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

should indicates a recommendation to do something

should not indicates a recommendation not to do something

may indicates permission to do something

need not indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

can indicates that something is possible

cannot indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

will indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

will not indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

might indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

iTeh STANDARD PREVIEW

https://standards.iteh.ai/catalog/standards/sist/f69b221e-87a5-4527-4b19-2f226a4e1bd0/etsi-ts-129-244-v15.8.0-2020-01

might not indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

is (or any other verb in the indicative mood) indicates a statement of fact

is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.
