

Designation: ~~C645-07b~~ Designation: **C 645 – 08**

## Standard Specification for Nonstructural Steel Framing Members<sup>1</sup>

This standard is issued under the fixed designation C 645; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reappraisal.

*This standard has been approved for use by agencies of the Department of Defense.*

### 1. Scope\*

1.1 This specification covers nonstructural steel framing members in interior construction assemblies.

1.2 The values stated in inch-pound units are to be regarded as the standard. The SI (metric) values given in parentheses are provided for information purposes only.

1.3 The following safety hazards caveat pertains only to the test methods portion, Sections 9 and 10, of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

ICC-ES-AC86 Acceptance Criteria for Steel Studs and Gypsum-Board Interior Nonload-Bearing Walls—Complete Construction—AC86—Approved July 1995 (Editorially revised September 2005) (Formerly ICBO AC86 dated July 1995)

### 3. Terminology

3.1 *Definitions*—Definitions shall be in accordance with Terminology C 11.

3.2 *Definitions of Terms Specific to This Standard:*

3.2.1 *members, n*—in screw application of gypsum board, studs, runners (track), hat furring channels, main beams and cross furring members of grid suspension systems or other items manufactured in accordance with this specification.

3.2.2 *nonstructural wall stud, n*—a member in a steel framed wall system which is limited to a lateral (transverse) load of not more than 10 lb/ft<sup>2</sup> (480 Pa), a superimposed vertical load, exclusive of sheathing materials, of not more than 100 lbf/ft (1460 N/m), or a superimposed vertical load of not more than 200 lbs (890 N).

### 4. Materials and Manufacture

4.1 Members shall be manufactured from steel meeting the requirements of Specification A 1003/A 1003M.

4.2 Members shall have a protective coating conforming to Specification A 653/A 653M – G 40 minimum or shall have a

\*A Summary of Changes section appears at the end of this standard.

protective coating with an equivalent corrosion resistance.

4.3 Members shall be manufactured from steel having a minimum thickness, individual measurement of 0.0179 in. (0.455 mm) before application of protective coating.

**5. Dimensions and Permissible Variations**

5.1 Studs and rigid furring channels shall have a configuration and steel thickness such that the system in which they are used will carry the design transverse loads without exceeding either the allowable stress of the steel or the allowable design deflection. Main beams and cross furring of grid suspension systems shall be limited to a deflection of L/240. The manufacturer shall supply sufficient data for calculating design performance.

NOTE 1—Allowable deflection varies depending on the cladding used and architectural requirements. Detailed requirements shall be specified in application specifications.

5.1.1 Members, except main beams of grid suspension systems, shall be sufficiently rigid to permit penetration of the screw.

5.1.2 Minimum width of face to which gypsum board is screw-attached shall be not less than 1 1/4 in. (32 mm).

5.1.3 Minimum lip dimension shall be 3/16 in. (5 mm). See Fig. 1.

5.2 Members shall be manufactured within the limits as shown in Table 1 and Fig. 2.

5.3 *Rigid Furring Channels*—Minimum depth shall be 7/8 in. (22 mm). Minimum width of furring attachment flanges (see Fig. 3) shall be 1/2 in. (12.7 mm).

5.4 Grid suspension systems include main beams and cross furring members which mechanically interlock to form a modular supporting network. Length tolerance for grid suspension members shall be ±1/16 in. (1.59 mm).

5.5 Runners (track) shall be formed in a U-shaped configuration, having web depth compatible with those of the studs of the same nominal size. The runners (track) shall be designed such that when the studs are placed in both the top and bottom runners (track), they are held by friction. Minimum height of flanges shall be 1 in. (25 mm).

**6. Edges**

6.1 Members shall be manufactured in such a fashion as to minimize burrs and sharp edges.

FIG. 1 Minimum Drywall Stud Cross Section

TABLE 1 Manufacturing Tolerances

Dimension <sup>A</sup>	Item Checked	Drywall Studs, in. (mm)	Drywall Track, in. (mm)
A	length	+ 1/8 (3.18) - 1/4 (6.35)	+ 1 (25.40) - 1/4 (6.35)
B <sup>B</sup>	web width	+ 1/32 (0.79) - 1/32 (0.79)	+ 1/8 (3.18) - 0 (0)
C	flare overbend	+ 1/16 (1.59) - 1/16 (1.59)	+ 0 (0) - 3/16 (4.76)
D	hole center width	+ 1/8 (3.18) - 1/8 (3.18)	NA
E	hole center length	+ 1/4 (6.35) - 1/4 (6.35)	NA
F	crowns	+ 1/8 (3.18) - 1/8 (3.18)	+ 1/8 (3.18) - 1/8 (3.18)
G	camber	1/32 per ft (0.79) 1/2 max (12.7)	1/32 per ft (0.79) 1/2 max (12.7)
H	bow	1/32 per ft (0.79) 1/2 max (12.7)	1/32 per ft (0.79) 1/2 max (12.7)
I	twist	1/32 per ft (0.79) 1/2 max (12.7)	1/32 per ft (0.79) 1/2 max (12.7)

<sup>A</sup> All measurements shall be taken not less than 1 ft (305 mm) from the end.  
<sup>B</sup> Outside dimension for stud; inside for track.

FIG. 2 Manufacturing Tolerances

7. Cutouts

7.1 Cutouts shall not reduce the performance of the members in the gypsum board construction assembly below the specified performance requirements.

8. Sectional Properties

8.1 The sectional properties of members shall be computed in accordance with AISI Specifications for the Design of Cold-Formed Steel Structural Members (See Tables 2 and 3 and Figs. 1 and 3).
