Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a technical committee may decide to publish other types of normative document:

— an ISO Publicly Available Specification (ISO/PAS) represents an agreement between technical experts in an ISO working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;

— an ISO Technical Specification (ISO/TS) represents an agreement between the members of a technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/PAS or ISO/TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/PAS or ISO/TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO/TS 15000-5:2005 was prepared by Technical Committee ISO/TC 154, *Processes, data elements and documents in commerce, industry and administration*.

Pages 49 and 50, 6.1.4.1.4

Replace entry [C21] with the following:

[C21] The *Dictionary Entry Name* shall only contain verbs, nouns and adjectives unless a different part of speech is part of an official title, part of a term listed in the Oxford English Dictionary, or part of a *Controlled Vocabulary*. This rule shall be applied to the English language, and may be applied to other languages as appropriate.

Replace entry [C27] with the following:

[C27] The name of a *Property Term* shall occur naturally in the definition and may consist of more than one word. A *Basic Core Component Property Term* plus a *Representation Term*, or an *Association Core Component Property Term* plus associated *Object Class Term*, shall be unique within the Context of an *Object Class* but may be reused across different *Object Classes*.

Page 53, 6.1.4.2.4

Replace entry [B22] with the following:

[B22] The *Dictionary Entry Name* shall only contain verbs, nouns and adjectives unless a different part of speech is part of an official title, part of a term listed in the Oxford English Dictionary, or part of a *Controlled Vocabulary*.

[B25] The *Dictionary Entry Name* of an *Association Business Information Entity* shall consist of the following components in the specified order:

- the object class term of the associating *Business Information Entity*, and possibly additional qualifier term(s),
- the property term that reflects the nature of the association between object classes, and possibly additional qualifier term(s),
- the object class term of the associated *Business Information Entity*, and possibly additional qualifier terms(s).
