

Designation: C1462 – 00(Reapproved 2008)

Standard Specification for Uranium Metal Enriched to More than 15 % and Less Than 20 % ^{235}U ¹

This standard is issued under the fixed designation C1462; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers nuclear grade uranium metal that has either been processed through an enrichment plant, or has been produced by the blending of highly enriched uranium with other uranium, to obtain uranium of any ^{235}U concentration below 20 % (and greater than 15 %) and that is intended for research reactor fuel fabrication. The scope of this specification includes specifications for enriched uranium metal derived from commercial natural uranium, recovered uranium, or highly enriched uranium. Commercial natural uranium, recovered uranium and highly enriched uranium are defined in Section 3. The objectives of this specification are to define the impurity and uranium isotope limits for commercial grade enriched uranium metal.

1.2 This specification is intended to provide the nuclear industry with a standard for enriched uranium metal which is to be used in the production of research reactor fuel. In addition to this specification, the parties concerned may agree to other appropriate conditions.

1.3 The scope of this specification does not comprehensively cover all provisions for preventing criticality accidents or requirements for health and safety or for shipping. Observance of this standard does not relieve the user of the obligation to conform to all applicable international, federal, state, and local regulations for processing, shipping, or any other way of using uranium metal (see, for example, C996 regarding references).

3. Terminology

3.1 Definitions of Terms Specific to This Standard:

3.1.1 Definitions of Terms Specific to This Standard—Terms shall be defined in accordance with Terminology C859, except for the following:

3.1.2 *commercial grade enriched uranium metal*—uranium metal derived from commercial natural uranium, recovered uranium, or uranium obtained from the blending of highly enriched uranium with commercial natural uranium, recovered uranium, or depleted uranium.

3.1.3 *commercial natural uranium*—any form of natural unirradiated uranium (containing $0.711 + 0.004 \text{ g } ^{235}\text{U}$ per 100 g U).

3.1.4 *depleted uranium*—any form of unirradiated uranium with a ^{235}U content less than commercial natural uranium.

¹ This specification is under the jurisdiction of ASTM Committee C26 on Nuclear Fuel Cycle and is the direct responsibility of Subcommittee C26.02 on Fuel and Fertile Material Specifications.

Current edition approved Jan. 1, 2008. Published February 2008. Originally approved in 2000. Last previous edition approved in 2005 as C1462 – 00 (2005). DOI: 10.1520/C1462-00R08.
