Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™, LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the **GSM** logo are trademarks registered and owned by the GSM Association.

Foreword

This Technical Specification (TS) has been produced by ETSI Special Committee Emergency Communications (EMTEL).

[ETSI TS 101 470 V1.2.1 \(2024-12\)](#)

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

Total Conversation, as defined in Recommendation ITU-T F.703 [2], is a combination of three media in a conversation: video, Real-Time Text and audio and considered as a general multimedia conversational service. Internet-based Total Conversation services and terminals are deployed in a number of countries in Europe, and adopted for example by some persons with disabilities who need video for sign language communication or Real-Time Text for a text based conversation instead of or as complement to a voice conversation. The present document specifies how Total Conversation can be used for access to emergency services by emergency communications employing communication modalities suitable both for the Total Conversation Terminal user and PSAP call-taker. It provides opportunities to more rapid, reliable and confidence-creating resolution of the emergency cases compared to plain voice emergency communications.

The use of Total Conversation is of special interest for enabling access to emergency communications and make the communication more usable for those persons who may have little or no use of voice telephony because of disabilities related to hearing, speech or other human communication functions.

The present document is based on ETSI TR 103 170 [i.5].

[ETSI TS 101 470 V1.2.1 \(2024-12\)](#)

<https://standards.iteh.ai/catalog/standards/etsi/1ae20261-b3f9-495e-a82e-643a228b9bab/etsi-ts-101-470-v1-2-1-2024-12>

1 Scope

The present document defines conditions for using Total Conversation for emergency communications with more media than in the regular voice call. It addresses the answering of Public Safety Answering Points (PSAP) and the potential impact on features provided by PSAPs for handling Total Conversation. The present document also addresses functional requirements regarding the interface to the PSAP, the connection to external supporting services, the transferring and sharing of the communication between emergency communication organizations, the logging and recording at the PSAP, the PSAP call-back aspects and specific communication routing and location information provision aspects for Total Conversation. The present document refers to existing standards relevant for Total Conversation user terminals and serving networks to facilitate a Total Conversation emergency communication. The present document does not imply any requirements on user terminals in general to be Total Conversation terminals.

The service specified here is a solution for accessible emergency communications intended to address requirements in the European Electronic Communications Code [i.1] and the European Accessibility Act [i.2].

Due consideration is taken of related standardization (e.g. 3GPP™ and IETF) and work in other bodies (e.g. the European Emergency Number Association (EENA)).

3 Definition of terms, symbols and abbreviations

Document Preview

3.1 Terms

For the purposes of the present document, the following terms apply: [ETSI TS 101 470 V1.2.1 \(2024-12\)](#)

address: identifier of the destination of a communication containing only numbers, service URNs, or a wider range of characters depending on the rules established by the application service provider

application service provider: organization or entity that, via a serving network, provides application-layer services, which may include voice, video and text communication

assisting services: services invoked during a communication, assisting the user or the call-taker with specific tasks in the communication

NOTE: Such tasks can for example be language translations, relay service or expert advice.

emergency service communications system: ESInet and PSAPs together, including technology for both emergency communication handling and additional functions such as emergency communication distribution, emergency communication recording, logging, and connection to emergency communications queue

Emergency Services IP network (ESInet): Internet Protocol (IP) based communications network dedicated for emergency communications for public safety use

NOTE: An ESInet has an interface to the application service provider conveying emergency communications from users. The ESInet is a managed IP network that is used for emergency services communications, and can be shared by all public safety agencies in a region. It provides the IP transport infrastructure upon which independent application platforms and core services can be deployed. ESInets may be interconnected at local, regional, state, federal, national, and international levels to form an IP-based internetwork. The term ESInet designates the network, not the services that ride on the network.

home environment: environment responsible for overall provision and control of the Personal Service Environment of its subscribers

IP Multimedia Subsystem (IMS): standardized Next Generation Networking (NGN) architecture for telecom operators that want to provide mobile and fixed multimedia services

modalities: methods for human expression and perception of communication

NOTE: Examples are written, signed and spoken languages, pictures, gestures, etc.

multi-party communication: real-time communication session with more than two participants where media sent from participants are distributed for presentation among the participants in the communication

personal service environment: environment containing personalized information defining how subscribed services are provided and presented towards the user

NOTE: Each subscriber of the Home Environment has her/his own Personal Service Environment. The Personal Service Environment is defined in terms of one or more User Profiles.

Public Safety Answering Point (PSAP): physical location where emergency communications are received under the responsibility of a public authority

Real-Time Text (RTT): form of text conversation in point to point situations or in multipoint conferencing where the text being entered is displayed in such a way that the communication is perceived by the user as being continuous

NOTE: This feature is often called RTT.

relay service: telecommunications service that enables users of different modes of communication e.g. text, sign, speech, to interact by providing conversion between the modes of communication, normally by a human operator

NOTE: A type of assisting service (definition from ETSI ES 202 975 [15]).

serving network: entity that provides the user with access to the services of the Home Environment

SIP: session control environment for communications, using the IETF RFC 3261 [16] and related protocols in the IP networks

NOTE: The above refers to an environment outside the scope of IMS.

total conversation: bidirectional symmetric real-time transfer of motion video, Real-Time Text and voice between users in two or more locations

[ETSI TS 101 470 V1.2.1 \(2024-12\)](https://standards.etsi.org/Group%207/standards/TS%20101%20470%20V1.2.1%20(2024-12).pdf)

total conversation service: multimedia real time conversation service that provides bidirectional symmetric real time transfer of motion video, real time text and voice between users in two or more locations

total conversation terminal: user terminal capable of being used for Total Conversation

user: individual taking advantage of the Total Conversation service

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

3GPP	Third Generation Partnership Project
BOM	Byte Order Mark
CRLF	Carriage Return, Line Feed
CS	Circuit Switched
EC	European Commission
EENA	European Emergency Number Association
EMTEL	Emergency Communications
ESInet	Emergency Services IP network
GRUU	Globally Routable User Agent URI
GTT	Global Text Telephony
