Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Foreword

This European Standard (EN) has been produced by ETSI Technical Committee Environmental Engineering (EE).

National transposition dates

Date of adoption of this EN:	2 January 2023
Date of latest announcement of this EN (doa):	30 April 2023
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	31 October 2023
Date of withdrawal of any conflicting National Standard (dow):	31 October 2023

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

In order to facilitate a shift to a more sustainable economy, Circular Economy (CE) has been proposed as one of the main ways forward. In this context, CE combined with Information and Communication Technology (ICT) could enable decoupling of economic growth and environmental impact, see ETSI TR 103 476 [i.1] and Recommendation ITU-T L.1022 [i.6]. In 2015, the European Commission issued Mandate 543 (M/543 [i.12]) Standardization Request with regard to ecodesign requirements on material efficiency aspects for energy-related products, see ETSI TR 103 476 [i.1] requesting European standardization organizations to develop standards. ETSI TC-EE accepted this mandate for ICT network infrastructure goods, and CEN-CENELEC delivered a series of standards EN 45552 [1] to EN 45559 [8] to cover the products within their scope. The present document is intended to provide input for standardization related to Mandate M/543 [i.12]. The present document aims to show in which ways the finished material efficiency standards EN 45552 [1] to EN 45559 [8] may or may not be directly applicable to ICT network infrastructure goods. The present document is intended to provide an aid for further standardization, taking into account the specificities of ICT network infrastructure goods which include complex products designed for long operating lifetime, high availability and professional operation and maintenance processes in a business-to-business environment.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[SIST EN 303 808 V1.1.1:2023](https://standards.iteh.ai/catalog/standards/sist/b992d99f-150f-4e03-bbf9-211c731299e5/sist-en-303-808-v1-1-1-2023)

<https://standards.iteh.ai/catalog/standards/sist/b992d99f-150f-4e03-bbf9-211c731299e5/sist-en-303-808-v1-1-1-2023>

1 Scope

The present document defines an assessment of the direct applicability of the general material efficiency standards to ICT network infrastructure goods in the context of circular economy. The existing generic standards address durability; ability to remanufacture; repair, reuse, and upgrade; recyclability and recoverability; assessment of recycled content and reused components; critical raw material content and information provision. The present document highlights where further work on metrics/KPI and measurement methodologies may be needed for ICT network infrastructure goods beyond each of the general standards. Specific product standards will take precedence over the present document. The present document is a product family standard and will not define specific product requirements.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <https://docbox.etsi.org/Reference/>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] EN 45552:2020: "General method for the assessment of the durability of energy-related products", (produced by CEN and CENELEC).
- [2] EN 45553:2020: "General method for the assessment of the ability to remanufacture energy-related products", (produced by CEN and CENELEC).
- [3] EN 45554:2020: "General methods for the assessment of the ability to repair, reuse and upgrade energy-related products", (produced by CEN and CENELEC).
- [4] EN 45555:2019: "General methods for assessing the recyclability and recoverability of energy-related products", (produced by CEN and CENELEC).
- [5] EN 45556:2019: "General method for assessing the proportion of reused components in energy-related products", (produced by CEN and CENELEC).
- [6] EN 45557:2020: "General method for assessing the proportion of recycled material content in energy-related products", (produced by CEN and CENELEC).
- [7] EN 45558:2019: "General method to declare the use of critical raw materials in energy-related products", (produced by CEN and CENELEC).
- [8] EN 45559:2019: "Methods for providing information relating to material efficiency aspects of energy-related products", (produced by CEN and CENELEC).

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] ETSI TR 103 476: "Environmental Engineering (EE); Circular Economy (CE) in Information and Communication Technology (ICT); Definition of approaches, concepts and metrics".

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the following terms apply:

NOTE: Refer to TR 45550 [i.15] for an extensive account of relevant definitions.

component: hardware constituent of a product that cannot be taken apart without destruction or impairment of its intended use [5]

NOTE: A populated printed circuit board may be considered a component and/or a part from the perspective of the present document.

critical raw material: materials which, according to a defined classification methodology, are economically important, and have a high-risk associated with their supply [i.15]

NOTE: For the purpose of EN 45558 [7], CRMs are those materials listed in annex 1 of COM(2017) 490 final [i.7]. Future updates to this list will apply and replace former versions of this list.

durability: ability to function as required, under defined conditions of use, maintenance and repair, until a limiting state is reached [i.15]

NOTE 1: The degree to which maintenance and repair are within the scope of durability will vary by product or product group [i.15].

NOTE 2: The user of EN 45552 [1] has to define the criteria for the transition from limiting state to End of Life (EoL). For more information see Figure D.1 in EN 45552 [1].

ICT network: set of nodes and links that provide physical or over the air information and communication connections between two or more defined points

EXAMPLE: Wireless network, fixed network, Local Area Network (LAN), home network and server network, access networks, core networks, cloud computing networks [i.8].

ICT network infrastructure goods: information and communication equipment used in ICT network except ICT Goods used by subscribers

part: hardware, firmware or software constituent of a product [2]

recoverability: ability of a waste product to be recovered [4]

NOTE: Recoverability is not defined in TR 45550 [i.15] but just recovery and energy recovery.

recyclability: ability of a product to be recycled at End of Life [4]

NOTE: Recyclability is not defined in TR 45550 [i.15] but just recycling.

recycled content: share of material which is either pre-consumer material or post-consumer material, of a specified total mass [6]

NOTE 1: Recycled content is not defined in TR 45550 [i.15] but just recycled material.

NOTE 2: Total mass may be the total mass of the product, but this is not always the case.

remanufacturing: industrial process which produces a product from used products or used parts where at least one change is made which influences the safety, original performance, purpose or type of the product [i.15]

NOTE 1: The product created by the remanufacturing process may be considered a new product when placing on the market. Refer to the EU Blue Guide [i.14], [i.15] and [3] for additional information.

NOTE 2: Refurbishing is a similar concept to remanufacturing except that it does not involve changes influencing safety, original performance, purpose or type of the product. It is not covered by EN 45553 [2] or TR 45550 [i.15].
