This European Standard was approved by CEN on 17 March 2011 and includes Amendment 1 approved by CEN on 11 January 2015.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

EN 771-5:2011+A1:2015 (E)

European foreword

This document (EN 771-5:2011+A1:2015) has been prepared by Technical Committee CEN/TC 125 "Masonry", the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by February 2016, and conflicting national standards shall be withdrawn at the latest by May 2017.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes A1 EN 771-5:2011 A1.

This document includes Amendment 1 approved by CEN on 2015-01-11.

The start and finish of text introduced or altered by amendment is indicated in the text by tags A1 A1.

A1 This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports basic requirements for construction works of the EU Construction Products Regulation (Regulation (EU) No 305/2011).

For relationship with EU Regulation/Directive(s), see informative Annex ZA, which is an integral part of this document. A1

This European Standard also takes into account the general rules for unreinforced and reinforced masonry in Eurocode 6.

EN 771, *Specification for masonry units* consists of:

- *Part 1: Clay masonry units*
- *Part 2: Calcium silicate masonry units*
- *Part 3: Aggregate concrete masonry units (Dense and light weight aggregates)*
- *Part 4: Autoclaved aerated concrete masonry units*
- *Part 5: Manufactured stone masonry units*
- *Part 6: Natural stone masonry units*

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

1 Scope

This European Standard specifies the characteristics and performance requirements of manufactured stone masonry units for which the main intended uses are facing or exposed masonry in load bearing or non-load bearing building and civil engineering applications. The units are suitable for all forms of coursed or random masonry walling, including single leaf, cavity, partition, retaining and the external masonry to chimneys. They can provide fire protection, thermal insulation, sound insulation and sound absorption.

This standard covers concrete masonry units manufactured to resemble natural stone using casting or pressing techniques with or without textured surfaces produced, by casting, splitting, washing, blasting or tooling and with or without variable outline effects. It covers homogeneous masonry units and those consisting of different facing and backing concrete mixes, but excludes those manufactured with an adhesive bonded decorative face. This standard does not cover masonry units intended to conform to EN 771-3.

It defines the performance related to e.g. strength, density, dimensional accuracy, surface appearance and provides for the \overline{A}_1 assessment and verification of constancy of performance (AVCP) \overline{A}_1 of the product to this European Standard. The marking requirements for products covered by this European Standard are also included.

This European Standard does not apply to storey height panels, masonry units used for chimney flues or units manufactured with an adhesive bonded decorative face. It does not include products intended to be used as a damp proof course nor does it specify standard sizes for manufactured stone masonry units or work dimensions and angles of specially shaped units. It does not cover units with an incorporated thermal insulation material bonded to the faces of the unit susceptible to be exposed to fire.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1**masonry unit**

preformed component intended for use in masonry construction

3.2**facing masonry unit**

masonry unit intended for use with one or more faces visible in use which may or may not be exposed

3.3**exposed face**

face intended to be exposed to external climatic conditions

3.4**manufactured stone masonry unit**

facing masonry unit having at least one exposed face with a close structure formed from either one or two homogeneous mixtures of aggregate, cementitious binder and other materials moulded under pressure and/or vibration and with or without further processing, intended to resemble and be used as an alternative to natural stone

[SIST EN 771-5:2011+A1:2015](https://standards.iteh.ai/catalog/standards/sist/23bd6554-f343-4a86-8820-1ef12d165645/sist-en-771-5-2011a1-2015)

3.5**two-part masonry unit**

masonry unit manufactured with different facing and backing concretes

<https://standards.iteh.ai/catalog/standards/sist/23bd6554-f343-4a86-8820-1ef12d165645/sist-en-771-5-2011a1-2015>

3.6**co-ordinating size**

size of the co-ordinating space allocated to a masonry unit including an allowance for joints

3.7**work size**

size of a masonry unit specified for its manufacture to which the actual size conforms within permissible deviations

3.8**actual size**

size of a masonry unit as measured

3.9**regular shaped masonry unit**

masonry unit with an overall rectangular parallelepiped shape

3.10**specially shaped masonry unit**

masonry unit which is not a rectangular parallelepiped

3.11**accessory unit**

masonry unit which is shaped to provide a particular function, e.g. to complete the geometry of the masonry

3.12**interlocking features**

shaped, matched projections and indentations on masonry units

EXAMPLE Tongue and groove systems.

3.13**recess**

depression or indentation in one or more surfaces of a masonry unit

EXAMPLE Mortar pocket, rendering keyway.

3.14**normalised compressive strength of masonry units**

compressive strength of masonry units converted to the air dry compressive strength of an equivalent 100 mm wide × 100 mm high masonry unit

NOTE See procedure given in Annex B of this standard.

3.15**declared value**

value that a manufacturer is confident of achieving bearing in mind the precision of the test and the variability of the manufacturing process

3.16**profiled surface**

surface with pronounced relief

3.17**textured surface**

surface which, either during or after manufacture, is subjected to mechanical, physical or chemical processing

3.18**Category I masonry units**

units with a declared compressive strength with a probability of failure to reach it not exceeding 5 %

NOTE This can be determined via the mean or characteristic value.

3.19**Category II masonry units**

units not intended to comply with the level of confidence of Category I units

3.20**mean compressive strength of masonry units**

arithmetic mean of the compressive strengths of masonry units

3.21**characteristic compressive strength of masonry units**

compressive strength corresponding to the 5 % fractile of the compressive strength of masonry units

3.22**consignment**

shipment from the supplier

STANDARD PREVIEW
(standards.iteh.ai)

SIST EN 771-5:2011+A1:2015

<https://standards.iteh.ai/catalog/standards/sist/23bd6554-f343-4a86-8820-1ef12d165645/sist-en-771-5-2011a1-2015>

EN 771-5:2011+A1:2015 (E)**3.23****product group**

products from one manufacturer having common values for one or more characteristic

4 Materials

The specifications of the materials to be used shall be included in the production control documentation. If appropriate European Standards are available, they shall be used except that aggregate need not comply with the grading requirements. If not available, the manufacturer shall specify the materials and have data on their suitability.

5 Requirements for manufactured stone masonry units**5.1 General**

The requirements and properties specified in this European Standard shall be defined in terms of the test methods and other procedures referred to in this European Standard.

It should be noted that the standard test methods are not always applicable to specially shaped masonry units and accessory units as defined in 3.10 and 3.11 respectively.

The conformity criteria given in the following subclauses relate to $\overline{A_1}$ product type determination $\overline{A_1}$ (see 8.2) and when relevant to consignment testing (see Annex A). For the compressive strength of Category I units use a 50 % fractile ($p = 0,50$) for mean values or 5 % fractile ($p = 0,05$) for characteristic values and a confidence level of 95 %.

For production evaluation the manufacturer shall define the conformity criteria in the factory production control documentation (see 8.3).

5.2 Dimensions and tolerances**5.2.1 Dimensions**

The manufacturer shall declare the dimensions of the manufactured stone masonry units in millimetres for length, width and height, in that order (see Figure 1), and shall declare the tolerance category (see 5.2.2.1).

**Key**

- 1 Length 3 Height 5 Face
2 Width 4 Bed 6 Header

NOTE This relates to the normal use of the masonry units in the wall.

Figure 1 — Dimensions and surfaces

They shall be given in terms of work size.

NOTE In addition the co-ordinating size can be given.

They shall not exceed 650 mm in any co-ordinating dimension excluding the thickness of any profile on a non-planar face.

[SIST EN 771-5:2011+A1:2015](https://standards.iteh.ai/catalog/standards/sist/23bd6554-f343-4a86-8820-1ef12d165645/sist-en-771-5-2011a1-2015)

<https://standards.iteh.ai/catalog/standards/sist/23bd6554-f343-4a86-8820-1ef12d165645/sist-en-771-5-2011a1-2015>

5.2.2 Dimensional tolerances

5.2.2.1 Tolerances

The actual dimensions of individual regular units shall conform to the declared work size dimensions subject to the tolerance given in Table 1, except where surfaces are deliberately non-planar, in which case the manufacturer shall declare the tolerances. The manufacturer may declare closer tolerances for one or more dimensions.

Table 1 — Limit deviations in millimetres

Tolerance category	D1	D2	D3
Length	+3 -5	+1 -3	Declared values
Width	+3 -5	+1 -3	
Height	+3 -5	+1 -3	

Tolerances for specially shaped and accessory units shall be declared by the manufacturer.

EN 771-5:2011+A1:2015 (E)

If sampled in accordance with A.2 and tested in accordance with EN 772-16, the mean value of the measurements taken of any one dimension of a single unit shall not vary from the manufacturer's work size by more than the tolerances given above for the declared tolerance category.

5.2.2.2 Flatness of bed faces

When manufactured stone masonry units are intended to be used with thin layer mortar, the manufacturer shall declare the maximum deviation from flatness of the bed faces.

If sampled in accordance with A.2 and tested in accordance with EN 772-20, the deviation from flatness of the bed faces shall not exceed the declared value.

5.2.2.3 Parallelism of bed faces

When manufactured stone masonry units are intended to be used with thin layer mortar, the manufacturer shall also declare the maximum deviation from plane parallelism of the bed faces.

If sampled in accordance with A.2 and tested in accordance with EN 772-16:2011 Method d), the deviation from plane parallelism shall not exceed the declared value.

5.3 Configuration and appearance**5.3.1 General**

Units may be homogenous or two-part, but, in the case of two-part masonry units, the facing mix shall have a thickness of not less than 20 mm. There shall be no delamination between the facing and the backing concretes.

5.3.2 Configuration

SIST EN 771-5:2011+A1:2015

<https://standards.iteh.ai/catalog/standards/sist/23bd6554-f343-4a86-8820-1e82d1f55645/sist-en-771-5-2011+A1-2015>

When relevant to the uses for which manufactured stone masonry units are put on the market, the configuration shall be declared, including the maximum area of voids on a bed face as a percentage of the length × width of the unit. The declaration may be made using a drawing or an illustration.

Units intended for use in structural applications shall contain not more than 60 % by volume of all formed voids and may be provided with or without recesses or interlocking features. Such units containing not more than 25 % by volume of formed voids and having no single void greater than 12,5 % of the total volume of the unit may be declared as Group 1 masonry units, in accordance with the requirements of EN 1996-1-1.

When conformity with the declared configuration cannot be assessed by visual inspection, masonry units shall be sampled in accordance with A.2, measured in accordance with EN 772-16 and the values calculated.

5.3.3 Surface appearance

The exposed surfaces of manufactured stone masonry units shall be plain, profiled or textured as declared by the manufacturer. Compliance of textured or profiled surfaces may be established on the basis of comparison with any approved samples. Comparison shall be made from a distance of 3 m in normal daylight conditions.

5.3.4 Flatness of surfaces

Where the surfaces of the unit are declared by the manufacturer to be plain (see 5.3.3), they shall not deviate from a plane by more than $(0,1 \sqrt{L_d})$ mm or 2 mm whichever is the greater, where L_d is the length of the diagonal of the surface declared plain. If sampled in accordance with A.2 and tested in accordance with EN 772-20, no individual measurement of the deviation from a plane shall exceed the value given above.
