

Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Controlled Outside Diameter¹

This standard is issued under the fixed designation D 3035; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

1. Scope

1.1 This specification covers polyethylene (PE) pipe made in thermoplastic pipe dimension ratios based on outside diameter and pressure rated for water (see Appendix X1). Included are criteria for classifying PE plastic pipe materials and PE plastic pipe, a system of nomenclature for PE plastic pipe, and requirements and test methods for materials, workmanship, dimensions, sustained pressure, burst pressure, and environmental stress cracking. Methods of marking are also given.

1.2 All pipes produced under this specification may be used for the transport of water, industrial process liquids, effluents, slurries, municipal sewage, etc. The user should consult the manufacturer to determine whether the material being transported is compatible with polyethylene pipe and will not affect the service life beyond limits acceptable to the user.

1.3 The values stated in inch-pound units are to be regarded as the standard. The values given in parentheses are for information only.

1.4 The following safety hazards caveat pertains only to the test methods portion, Section 7, of this specification: *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 Definitions—Definitions are in accordance with Terminology F 412, and abbreviations are in accordance with Terminology D 1600, unless otherwise specified.

3.2 Definitions of Terms Specific to This Standard:

3.2.1 *hydrostatic design stress*—the estimated maximum tensile stress in the wall of the pipe in the circumferential orientation due to internal hydrostatic water pressure that can be applied continuously with a high degree of certainty that failure of the pipe will not occur.

3.2.2 *pressure rating (PR)*—the estimated maximum pressure that water in the pipe can exert continuously with a high degree of certainty that failure of the pipe will not occur.

3.2.3 *relation between dimension ratio, hydrostatic design stress, and pressure rating*—the following expression, commonly known as the ISO equation,⁵ is used in this specification to relate dimension ratio, hydrostatic design stress, and pressure rating:

$$2S/P = DR - 1 \text{ or } 2S/P = (D_o/t) - 1 \quad (1)$$

where:

S = hydrostatic design stress, psi (MPa),

P = pressure rating, psi (MPa),

D_o = average outside diameter, in. (mm)

t = minimum wall thickness, in. (mm), and,

DR = thermoplastic pipe dimension ratio (D_o/t for PE pipe).

3.2.4 *thermoplastic pipe dimension ratio (DR)*—the ratio of pipe diameter to wall thickness. For PE pipe covered by this specification it is calculated by dividing the average outside diameter of the pipe, in inches, by the minimum wall thickness, in inches. If the wall thickness calculated by this formula is less than 0.062 in. (1.6 mm), it shall be arbitrarily increased to 0.062 in.

3.2.5 *thermoplastic pipe materials designation code*—the polyethylene pipe materials designation code shall consist of the abbreviation PE for the type of plastics, followed by the ASTM grade in Arabic numerals and the hydrostatic design stress in units of 100 psi with any decimal figures dropped. Where the hydrostatic design stress code contains less than two figures, a zero shall be used before the number. Thus, a complete material code shall consist of two letters and four figures for PE plastic pipe materials (see Section 5).

4. Pipe Classification

4.1 *General*—This specification covers PE pipe made from PE plastic pipe materials in various dimension ratios and water pressure ratings.

4.2 *Thermoplastic Pipe Dimension Ratios (DR)*—This specification covers PE pipe in various dimension ratios such as, but not limited to, DR 11, DR 13.5, DR 17, and DR 21. The pressure rating is uniform for all nominal sizes of pipe for a given PE pipe material and DR. (See Table X1.1.)

4.3 *Special Sizes*—Where existing system conditions or special local requirements make other diameters or dimension ratios necessary, other sizes or dimension ratios, or both, shall be acceptable in engineered products when mutually agreed upon by the customer and manufacturer if (1) the pipe is manufactured from plastic compounds meeting the material requirements of this specification and (2) the strength and design requirements are calculated on the same basis as those used in this specification.

5. Materials

5.1 *Classification*—Polyethylene compounds suitable for use in the manufacture of pipe under this specification shall meet

⁵ ISO R 161-1960, Pipes of Plastics Materials for the Transport of Fluids (Outside Diameters and Nominal Pressure), Part 1, Metric Series.

TABLE 1 Specification D 3350 Cell Classifications for Polyethylene Pipe Materials

PE Material Designation Code	PE 1404	PE 2606	PE 2708	PE 3608	PE 3708	PE 3710	PE 4608	PE 4708	PE 4710
Physical Property:	Cell Classifications								
Density	1	2	2	3	3	3	4	4	4
Melt Index	2	3 or 4	3 or 4	3 or 4	3 or 4	3 or 4	3 or 4	3 or 4	3 or 4
Flexural Modulus	3	3 or 4	3 or 4	4 or 5	4 or 5	4 or 5	4 or 5	4 or 5	4 or 5
Tensile Strength at Yield	1	3 or 4	3 or 4	4 or 5	4 or 5	4 or 5	4 or 5	4 or 5	4 or 5
Slow Crack Growth Resistance	1 ^A	6 ^B	7	6 ^B	7	7	6	7	7
Hydrostatic strength Classification	1	3	3	4	4	4	4	4	4
Color and UV Stabilizer ^C	C	C or E	C or E	C or E	C or E	C or E	C or E	C or E	C or E

^A Test Method D 1693 ESCR.

^B Test Method F 1473 PENT.

^C Classification C compounds shall contain 2 to 3.5 % carbon black when tested in accordance with Test Method D 1603-Clar Test Method D 4218. Code C and E compounds shall have sufficient antioxidants to meet requirements in Specification D 3350. Pipe produced from Classification E compounds is not suitable for continuous use in exposed outdoor applications. Classification E compounds shall have sufficient UV stabilizer to protect pipe from deleterious effects due to continuous outdoor exposure during shipping and unprotected outdoor storage for up to 18 months.

TABLE 2 Outside Diameters and Tolerances for DR-PR PE Plastic Pipe

Nominal Pipe Size, in.	Outside Diameter, in. (mm)	Tolerances, in. (mm)
1/2	0.840 (21.34)	±0.004 (0.10)
3/4	1.050 (26.7)	±0.004 (0.10)
1	1.315 (33.4)	±0.005 (0.13)
1 1/4	1.660 (42.2)	±0.005 (0.13)
1 1/2	1.900 (48.3)	±0.006 (0.15)
2	2.375 (60.3)	±0.006 (0.15)
3	3.500 (88.9)	±0.008 (0.20)
4	4.500 (114.3)	±0.009 (0.23)
6	6.625 (168.28)	±0.011 (0.28)
8	8.625 (219.08)	±0.013 (0.33)
10	10.750 (273.05)	±0.015 (0.38)
12	12.750 (323.85)	±0.017 (0.43)
14	14.000 (355.60)	±0.063 (1.60)
16	16.000 (406.40)	±0.072 (1.83)
18	18.000 (457.20)	±0.081 (2.06)
20	20.000 (508.00)	±0.090 (2.29)
22	22.000 (558.80)	±0.099 (2.51)
24	24.000 (609.60)	±0.108 (2.74)

Specification D 3350 and shall be classified in accordance with Specification D 3350 and as shown in Table 1.

NOTE 1—Piping intended for use in the transport of potable water should be evaluated and certified as safe for this purpose by a testing agency acceptable to the local health authority. The evaluation should be in accordance with requirements for chemical extraction, taste, and odor that are no less restrictive than those included in ANSI/NSF Standard No. 14 or ANSI/NSF Standard No. 61. The seal or mark of the laboratory making the evaluation should be included on the piping.

NOTE 2—Pipe users should consult with the pipe manufacturer about the outdoor exposure life of the product under consideration.

5.2 *Long-term Property Requirements*—Polyethylene compounds that are suitable for use in the manufacture of pipe under this specification shall meet Specification D 3350 classification and property requirements in Table 1 and shall have PPI TR-4 HDB listings at 73°F (23°C). In addition, all pipe materials other than PE1404 that are intended to be suitable for use at temperatures from 80°F (27°C) through 140°F (60°C) shall have a minimum HDB at 140°F (60°C) of 630 psi (4.34 MPa). Materials that do not have an HDB at 140°F shall be limited to 80°F (27°C) and lower service temperatures. See 9.1.5.

NOTE 3—Additional information about long term stress ratings (HDB) for polyethylene compounds suitable for use in the manufacture of pipe under this specification is available in PPI TR-4.

NOTE 4—PPI TR-4 lists the maximum recommended hydrostatic design stress at 73°C for water; for PE 1404 materials as 400 psi; for PE 2606 materials as 630 psi; for PE 2708, PE 3708, PE 4608, and PE 4708 materials as 800 psi; and for PE 3710 and PE 4710 materials as 1000 psi.

5.3 *Rework Material*—Clean, rework material having the same cell classification or materials designation code and generated from the manufacturer’s own pipe production, may be used by the same manufacturer, as long as the pipe produced meets all of the requirements of this specification.

6. Requirements

6.1 *Workmanship*—The pipe shall be homogeneous throughout and free from visible cracks, holes, foreign inclusions, or other defects. The pipe shall be as uniform as commercially practicable in color, opacity, density, and other physical properties.

6.2 Dimensions and Tolerances:

6.2.1 *Outside Diameters*—The outside diameters and tolerances shall be as shown in Table 2 when measured in accordance with Test Method D 2122. For diameters not shown in Table 2, the tolerances shall be the same percentage of the outside diameter as those for the closest listed diameter.

6.2.2 *Wall Thicknesses*—The wall thicknesses and tolerances shall be as shown in Table 3 when measured in accordance with Test Method D 2122. For wall thicknesses (DRs) not shown in Table 3, the tolerances shall be the same percentage of the calculated minimum wall as for the closest listed minimum wall thickness.

6.2.3 *Wall Thickness Range*—The wall thickness range shall be within 12 % when measured in accordance with Test Method D 2122.

6.3 *Short-term Properties*—Specimens of pipe shall be tested in accordance with either Test Method D 1599 or Test Method D 2290. The test method used, Test Method D 1599 or Test Method D 2290, is determined by the pipe size and the availability of appropriate test equipment. Test Method D 1599 is generally used for 4 in. (114 mm) and smaller sizes and Test Method D 2290 for 2 in. (60 mm) and larger sizes. Short-term hoop stress and failure mode data is provided by either test.

6.3.1 *Burst Pressure*—The minimum burst pressure for PE plastic pipe shall be as given in Table 4, when determined in accordance with Test Method D 1599 and 7.5, using a minimum fiber stress of 1250 psi (8.62 MPa) for PE 1404 pipes and 2520 psi (17.37 MPa) for all other pipe materials. The failure mode shall be ductile. 7.6. The failure mode shall be ductile.

^A The minimum is the lowest wall thickness of the pipe allowable at any cross section. The maximum permitted wall thickness, at any cross section, is the minimum wall thickness plus the stated tolerance. All tolerances are on the plus side of the minimum requirement.

6.3.2 *Apparent Ring Tensile Strength*— The minimum apparent ring tensile strength at yield shall be 1250 psi (8.62 MPa) for PE 1404 and 2520 psi (17.37 MPa) for all other pipe materials when tested in accordance with Test Method D 2290, Procedure B and 7-67.7. The failure shall be ductile.

6.4 *Sustained Pressure at Ambient and Elevated Temperature for PE1404*—PE1404 pipes shall be tested in accordance with 7.4 at the stresses and temperatures specified in Table 6. Tests may be conducted on any pipe size, but tests conducted on 6 in. (168 mm) nominal size pipe shall be considered representative of all pipe sizes. At 176°F (80°C) pipes shall be tested at either stress. If ductile failures occur at the higher stress at 176°F (80°C), testing shall be repeated at the lower stress. Acceptable results are non-failure at the minimum average test time, or brittle failure at times exceeding the minimum average test time.

6.5 *Elevated Temperature Sustained Pressure for Pipes Other Than PE1404*—Elevated temperature sustained pressure tests for each Table 1 polyethylene pipe material (material designation) used in production at the facility shall be conducted per 7.5.

NOTE 5—Elevated temperature sustained pressure tests are intended to verify extrusion processing and are conducted in accordance with the manufacturer's quality program.

6.5.1 Passing results are (1) non-failure for all three specimens at a time equal to or greater than the Table 7 "minimum average time before failure" for the selected Table 7 Condition, or (2) not more than one ductile specimen failure and the average time before failure for all three specimens shall be greater than the specified "minimum average time before failure" for the selected
