

SLOVENSKI STANDARD
SIST ISO 7503-2:2025

01-januar-2025

**Merjenje radioaktivnosti - Merjenje in vrednotenje površinske kontaminacije - 2.
del: Preskusna metoda z uporabo vzorcev za brisanje**

Measurement of radioactivity - Measurement and evaluation of surface contamination -
Part 2: Test method using wipe-test samples

Mesurage de la radioactivité — Mesurage et évaluation de la contamination de surface
— Partie 2: Méthode d'essai utilisant des échantillons d'essai de frottis

Ta slovenski standard je istoveten z: ISO 7503-2:2016

ISO 7503-2:2016(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is Technical Committee ISO/TC 85, *Nuclear energy, nuclear technologies, and radiological protection*, Subcommittee SC 2, *Radiological protection*.

This second edition cancels and replaces the first edition (ISO 7503-2:1988), which has been technically revised.

ISO 7503 consists of the following parts, under the general title *Measurement of radioactivity — Measurement and evaluation of surface contamination*:

- *Part 1: General principles*
- *Part 2: Test method using wipe-test samples*
- *Part 3: Apparatus calibration*
