iTeh STANDARD PREVIEW

This European Standard was approved by CENELEC on 2017-04-07. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

[https://standards.iteh.ai/catalog/standards/sist/c4bf2539-6599-415a-b888-](https://standards.iteh.ai/catalog/standards/sist/c4bf2539-6599-415a-b888-e99398ca1501/sist-en-61800-9-2-2017)

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

EN 61800-9-2:2017**European foreword**

The text of document 22G/349/FDIS, future edition 1 of IEC 61800-9-2, prepared by SC 22G "Adjustable speed electric drive systems incorporating semiconductor power converters", of IEC/TC 22 "Power electronic systems and equipment" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 61800-9-2:2017.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2018-01-07
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2020-04-07

This document supersedes EN 50598-2:2014.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CENELEC by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For the relationship with EU Directive(s) see informative Annex ZZ, which is an integral part of this document.

Annex ZZ (informative)

Relationship between this European Standard and the ecodesign requirements of Commission Regulation (EC) No 640/2009 of 22 July 2009 implementing Directive 2005/32/EC of the European Parliament and of the Council with regard to ecodesign requirements for electric motors aimed to be covered

This standard has been prepared following the Commission's standardization request mandate to CEN, CENELEC and ETSI for Standardisation in the field of electrical motors with variable speed control and/or Power Drive System products, M/476 EN, to provide one voluntary means of conforming to ecodesign requirements of Commission Regulation (EC) No 640/2009 of 22 July 2009 implementing Directive 2005/32/EC of the European Parliament and of the Council with regard to ecodesign requirements for electric motors.

Once this standard is cited in the Official Journal of the European Union under that Regulation, compliance with the normative clauses of this standard given in Table ZZ.1 confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding ecodesign requirements of that Regulation, and associated EFTA regulations.

Table ZZ.1 – Correspondence between this European Standard and Commission Regulation (EC) No 640/2009 of 22 July 2009, Articles 2.2, 3.2 and 3.3 and Annex I, implementing Directive 2005/32/EC of the European Parliament and of the Council with regard to ecodesign requirements for electric motors and Mandate to CEN, CENELEC and ETSI for Standardisation in the field of variable speed drives and/or Power Drive System products M/476, relating to Directive 2009/125/EC establishing a framework for the setting of ecodesign requirements for energy-related products (recast)

Ecodesign requirements of Regulation (EC) No 640/2009	Clause(s) / sub-clause(s) of this EN 61800-9-2	Remarks / Notes
Article 2.2: Definition of variable speed control	Clause 3 sets the international confirmed definitions to comprehensively understand the correct terms needed to purchase and to apply the VSD technology and auxiliaries, as VSD is not the standardized term.	The comprehensive definitions are necessary to clarify possible misunderstandings and to set the link for fulfilling this regulation with necessary equipment in terms of: VSD, ASD, VFD, BDM, CDM, PDS.
Article 3.2: From 1. January 2015: motors with a rated output of 7,5-375 kW shall not be less efficient than the IE3 efficiency level, as defined in Annex I, point 1, or meet the IE2 efficiency level, as defined in Annex I, point 1, and be equipped with a variable speed drive. Article 3.3: From 1 January 2017: motors with a rated output of 0,75-375 kW shall not be less efficient than the IE3 efficiency level, as defined in Annex I, point 1, or meet the IE2 efficiency level, as defined in Annex I, point 1, and be equipped with a variable speed drive.	Subclauses 4.1 and 4.2 set the definitions for the concept of reference losses and for the optional relevant "torque versus speed operating points (including part load conditions)". Subclause 4.3 sets the workflow requirements to analyse the variable speed drive in combination with driven equipment. Subclauses 4.4 - 4.8 set the IE and the IES classification system for converters and variable speed drives. Clause 7 sets the requirements for losses determination and type testing to verify the efficiency classes.	The option to use an IE2 motor in a variable speed application instead of an IE3 motor depends mainly on the torque versus speed characteristic of the driven equipment and how it is applied. In order to do the right optional decision for maximum energy savings, EN 61800-9-2 gives the fundamental requirements, the workflows and the classification system for variable speed drives to do the fundamental assessment in the power range of 0,12 kW up to 1000 kW.

EN 61800-9-2:2017

Ecodesign requirements of Regulation (EC) No 640/2009	Clause(s) / sub-clause(s) of this EN 61800-9-2	Remarks / Notes
<p>Annex I, point 2: Information on the mandatory requirement to equip motors, which do not meet the IE3 efficiency level with a variable speed drive, shall be visibly displayed on the rating plate, technical documentation of the motor.</p>	<p>Clause 8 sets the requirements for the documentation that shall be provided by the manufacturers of the electronic frequency converters and the variable speed drives.</p>	<p>All energy efficiency related equipment labels (IE as well as IES classes) are addressed, in order to ensure a classification of the CDM, PDS.</p> <p>Also the provisions of sufficient information are fixed, to recognize this classification for the final application and/or system, where the converters or variable speed drives are used as components.</p>
<p>Annex I, point 2: Manufacturers shall provide information in the technical documentation on any specific precautions that must be taken when motors are assembled, installed, maintained or used with variable speed drives, including information on how to minimize electrical and magnetic fields from variable speed drives.</p>	<p>Subclause 8.4 sets requirements for the determination of additional energy losses and part load conditions depending on the BDM/CDM/PDS architecture and the possible use of options for compliance to other performance or environmental requirements.</p> <p>Clause 2 sets the relevant information on how to minimize electrical and magnetic fields from variable speed drives and the specific information by requesting reference to EN 61800-3</p> <p>"Electromagnetic compatibility requirements and specific test methods"</p> <p>Subclauses B.3.1 and B.3.2 are describing the use of high frequency electromagnetic interference filters and low frequency line harmonics filters to minimize electrical and magnetic fields from variable speed drive systems.</p>	<p>Electromagnetic compatibility (EMC) requirements are specific items for variable speed drives and are handled in the dedicated product standard EN 61800-3.</p> <p>Following those requirements leads to a fully compliant operation of variable speed drives since decades.</p>

WARNING 1: Presumption of conformity stays valid only as long as a reference to this European Standard is maintained in the list published in the Official Journal of the European Union. Users of this standard should consult frequently the latest list published in the Official Journal of the European Union.

WARNING 2: Other Union legislation may be applicable to the motor systems falling within the scope of this standard.

Table 8 – Reference parameters for Formula (10).....	38
Table 9 – Variables for Formula (10).....	38
Table 10 – Reference parameters for Formula (11):.....	38
Table 11 – Reference parameters for Formula (12).....	39
Table 12 – Reference parameters for Formula (13).....	39
Table 13 – Reference parameter for Formula (15).....	40
Table 14 – Reference parameter for Formula (14).....	40
Table 15 – Relative losses of the 400 V/9,95 kVA reference CDM at the operating points described in Figure 6.....	41
Table 16 – Reference parameter for Formula (19).....	43
Table 17 – Relative losses of the 400 V/7,5 kW RPDS	44
Table 18 – Reference CDM losses for class IE1 definition	47
Table 19 – Reference PDS losses of IES class 1 definition	50
Table 20 – Information requirements.....	62
Table A.1 – Relative losses (%) of reference CDMs at different power ratings at the operating points described in Figure 6	65
Table A.2 – Relative losses (%) of reference motors at different power ratings at the operating points described in Figure 5	66
Table A.3 – Relative losses (%) for a reference PDS at different power ratings at the operating points described in Figure 4	67
Table B.1 – Typical values of λ for different input converter topologies	75

Table D.1 – Recommended split of windage and friction losses for IC 411 self-ventilated motors	85
Table D.2 – Normative operating points with graphical representation	86
Table D.3 – Non-normative alternate operating points.....	88
Table D.4 – Interpolation coefficients of typical 4-pole reference IE2 induction machines	91
Table D.5 – Interpolation coefficients of typical 2-pole reference IE2 induction machines	92
Table E.1 – Relative losses of a 400 V/9,95 kVA example CDM at the predefined operating points	94
Table E.2 – Parameters of the example CDM.....	98
Table E.3 – Results of the CDM calculation according to the mathematical model	99
Table E.4 – Comparison of different loss evaluation methods	99
Table E.5 – Loss data of the 7,5kW reference motor.....	99

iTeh STANDARD PREVIEW
