# EUROPEAN STANDARD NORME EUROPÉENNE EUROPÄISCHE NORM

# DRAFT prEN 1493

ICS 43.180; 53.020.99

August 2020

English Version

## Vehicle lifts

Élévateurs de véhicule

Fahrzeug-Hebebühnen

Will supersede EN 1493:2010

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 98.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments not fication of any relevant patent rights of which they are aware and to provide supporting documentation alog/standards/sist/1331ca12-2e1a-4dfc-a0d0-

**Warning** : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

## **European foreword**

This document (prEN 1493:2020) has been prepared by Technical Committee CEN/TC 98 "Lifting platforms", the secretariat of which is held by DIN.

This document is currently submitted to the CEN Enquiry.

This document will supersede EN 1493:2010.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

EN 1493:2020 includes the following major changes with respect to EN 1493:2010:

- new definitions added;
- references to standards updated;
- rewording of a lot of paragraphs;
- updated requirements for mobile column lifts; RD PREVIEW
- requirements for dimensioning of ropes changeds.iteh.ai)
- some requirements for locking system of carrying arms added;
- https://standards.iteh.ai/catalog/standards/sist/1331ca12-2e1a-4dfc-a0d0-— requirements regarding protection against leakage in hydraulic systems clarified;
- additional requirements for lifts for motorcycles added;
- consideration on self braking drives added;
- new annexes with test methods for:
  - unintended blocking of the load carrying device;
  - carrying arms;
  - track end stops;
  - arm locking device;
  - end stop of telescopic arms.

## Introduction

This document is a type C standard as stated in EN ISO 12100:2010.

The machinery concerned and the extent to which hazards, hazardous situations and hazardous events are covered, are both indicated in the scope of this document. In addition, machinery should comply as appropriate with EN ISO 12100 for hazards which are not covered by this document.

When provisions of this type C standard are different from those which are stated in type A or B standards, the provisions of this type C standard take precedence over the provisions of the other standards, for machines that have been designed and built according to the provisions of this type C standard.

The object of this document is to define rules for safeguarding persons against the risk of accidents associated with the operation of vehicle lifts.

While devising this document it was assumed that only authorized persons operate the vehicle lifts and that the working area is sufficiently lit.

The requirement concerning loading control is not deemed pertinent to this document insofar as:

- experience and the state of the art suggests that failing to observe this requirement has not historically given rise to unsafe situations;
- such devices which would give protection against overall and local overloading are not currently available in forms which cover all eventualities;
   Teh STANDARD PREVIEW
- the weight and weight distribution is freely available for the type of vehicles to be lifted and as such it is the responsibility of the user to prevent an unsafe situation arising;
- vehicle lifts are generally designed to suit the maximum weight of vehicle to which it would reasonably be subjected; hence the normal duty of a lift is substantially lower than the maximum. 37b9e2a64cb9/osist-pren-1493-2020

## 1 Scope

This document applies to stationary, mobile and movable vehicle lifts, which are not intended to lift persons but which are designed to raise vehicles totally, for the purpose of examining and working on or under the vehicles whilst in a raised position. The vehicle lift may consist of one or more lifting-units.

Power supply to the vehicle lift by internal combustion engines is not considered.

The floor or ground supporting the vehicle lift in use is assumed to be horizontal.

This document does not exclude a person to enter in a lifted vehicle on wheel supporting lifts, e.g. for special works or for periodical technical inspection, and vehicle lifts for rail-bound vehicles.

This document does not contain requirements for hazards which may arise on vehicle lifts where the carrying device can be tilted.

This document is not valid for equipment for power driven parking of motor vehicles (see EN 14010). This document is applicable to vehicle lifts which are manufactured six month after the date of its publication as EN.

## 3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN ISO 12100:2010 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— IEC Electropedia: available at http://www.electropedia.org/

— ISO Online browsing platform: available at <u>http://www.iso.org/obp</u>

## 3.1 General

## 3.1.1

#### vehicle lift

lifting device with guided load carrying device for lifting land based means of transport such as cars, motorcycles, lorries, buses, trams, rail vehicles, industrial trucks and similar, in the following named vehicle, which is designed for working on or under the raised vehicle

NOTE 1 to entry The guidance of the load carrying device is given by the supporting structure.

NOTE 2 to entry The following types of vehicle lift are examples of those covered by this definition: single and multicolumn lifts, single and multi-cylinder lifts, mobile column lifts, scissor and parallelogram lifts, short stroke lifts, which support vehicle wheels, chassis or other designated lifting points (see Annex C (informative)).

## 3.1.2

#### normative vehicle

theoretical vehicle representative of the normal vehicles on which a lift is intended to operate, used as reference vehicle for structural calculations of the lift itself (see 4.7.4.2, 4.7.4.3)

#### 3.1.3

#### normal vehicle

land based mean of transport such as cars, motorcycles, lorries, buses, trams, trucks and similar commonly on the road

#### 3.1.4

#### special vehicle

vehicle that does not fall within the *normal vehicle* types and for which the Normative Vehicle is no longer representative (i.e.: fork lifts, dumpers, snowcats, railbound vehicles, mobile cranes, ...)

## 3.1.5

## wheel track

distance between the centre lines of the wheels on one axle or between centre lines of wheel pairs on twin wheel axles

## 3.1.6

## wheel base

distance between the centres of wheels of front and rear axle or from the centre of the wheels on the front axle to a point mid-way between axle pairs on twin axle vehicles

## 3.1.7

## rated load

maximum load that a lift has been designed to carry referring to the normative vehicle or to special vehicles mentioned in 4.7.4.4

## 3.1.8

lifting capacity

maximum load that a single independent lifting unit has been designed to carry when part of a multiple lifting units lift

## 3.1.9

## hazardous area

area under the load carrying device and under the lifted vehicle

Note 1 to entry The hazardous area is part of the hazard zone according to EN ISO 12100:2010, 3.11.

## 3.1.10

#### bystander

person other than the operator near the vehicle lift RD PREVIEW

#### 3.1.11

## (standards.iteh.ai)

lower limit position of the carrying device oSIST prEN 1493:2020

3.1.12

https://standards.iteh.ai/catalog/standards/sist/1331ca12-2e1a-4dfc-a0d0-37b9e2a64cb9/osist-pren-1493-2020

## unauthorised use

initial position

use by a person who has not received permission to operate the lift and instruction on its safe operation

## 3.1.13

## competent body

single person or organization that has the knowledge and the skill to conduct the work or examination

## 3.1.14

## periodical test investigation (PTI)

periodic roadworthiness tests for motor vehicles and their trailers in accordance with current legislation

## 3.2 Lift parts

#### 3.2.1

#### lifting unit

lifting device in general made up of a load carrying device, a supporting structure and its driving system

Note 1 to entry: A lifting unit may share the drive system/controls with other lifting units.

Note 2 to entry: Examples of lifting units are one of column of a two post lift (see Figure C.2), one unit of a double-scissor lift (see Figure C.3).

## 3.2.2

#### independent lifting unit

lifting unit not sharing the drive system with other lifting units and equipped with independent controls

## prEN 1493:2020 (E)

Note 1 to entry: Example of an independent lifting unit is a single column of a mobile column lift.

## 3.2.3

#### supporting structure

part(s) of the vehicle lift which offers guidance to the load carrying device, but which is not moving when the load is raised/lowered.

EXAMPLE The post on a two/four post lift.

## 3.2.4

#### load carrying device

part(s) of the vehicle lift which supports the load either by direct contact with the vehicle or through contact with pick-up plates or pads

Note 1 to entry: The load carrying device is the part of the structure of the lift which is moving when the load is raised/lowered.

EXAMPLE Tracks, platforms, carrying arms or other mechanical devices designed to raise and support a vehicle by designated lifting points.

#### 3.2.5

#### lifting element

medium through which the force is transmitted from the power source to the load carrying device

Note 1 to entry: Lifting elements include hydraulic and pneumatic cylinders, lead screw and nut systems as well as any flexible connections such as steel wire ropes and chains. (standards.iteh.ai)

#### 3.2.6

## mechanical lifting element

SIST prEN 1493:2020 lifting element that is reasonably subjected to wearlards/sist/1331ca12-2e1a-4dfc-a0d0-

37b9e2a64cb9/osist-pren-1493-2020

Note 1 to entry: Mechanical lifting elements are e.g. ropes, chains, carrying nuts and gears. Hydraulic and pneumatic cylinders do not fall under this definition.

## 3.2.7

#### carrying arm

load carrying device attached at one end, directly or indirectly to the lifting element and supporting the load at its other end

Note 1 to entry: Carrying arms are as an example used on two column lifts.

## 3.2.8

#### platform

horizontal surface or structure, part of the load carrying device, designed to drive on it with the vehicle when entering/leaving the vehicle lift.

Note 1 to entry: E.g. tracks in scissor lifts.

#### 3.2.9

#### pick-up plate

part of the load carrying device, e.g. on two column lifts with carrying arms, which has direct contact to the vehicle and which has an assigned position on the load carrying device

NOTE 1 to entry See Figure 1.

## 3.2.10

## pick-up pad

vehicle supporting pad which has direct contact with the vehicle but which does not have an assigned position, e.g. pads used on wheel free systems with platforms

NOTE 1 to entry See Figure 2.

Кеу

- 1 pick-up pad
- 2 platform

## 3.2.11

## fixed controls

control devices fixed to the structure of the lift or in any case set in a predefined fixed position when the lift is installed (e.g. fixed control console, controls installed on the walls of the workshop where the lift is installed)

## 3.2.12 mobile controls

control devices not fixed to the lift structure or somewhere else

## 3.2.13

#### wheel free system

lifting unit which is used in conjunction with a pit or vehicle lift with platform lifting the whole vehicle and allows the wheels to be removed

## 3.3 Lift type

#### 3.3.1

## multiple lifting units lift

combination of independent lifting units acting as one lift

## 3.3.2

## short stroke lift

floor mounted vehicle lift with a maximum vertical travel of not more than 500 mm, which is not designed for working under the raised load

NOTE 1 to entry These lifts are different to wheel free systems according to 3.2.13.

## 3.3.3

## fixed vehicle lift

vehicle lift fixed permanently to its location

## 3.3.4

## **movable vehicle lift** vehicle lift which can fulfil its function without being fixed to the floor and may be designed to be transportable **(standards.iteh.ai)**

## 3.3.5

## oSIST prEN 1493:2020

**mobile vehicle lift** movable vehicle lift equipped with wheels rollers tetra such that it can be moved from one place to another with or without load

## 3.3.6

## manually driven vehicle lift

vehicle lift where the load carrying device is driven by manual effort

## 3.3.7

## power-driven vehicle lift

vehicle lift where the load carrying device is not driven by manual effort

## 3.3.8

## mechanically driven vehicle lift

power-driven lift not using hydraulic nor pneumatic fluid power

## 3.3.9

## manually mobile vehicle lift

mobile vehicle lift which is moved by manual effort alone

## 3.3.10

## vehicle lift with powered mobility

mobile vehicle lift fitted with a displacement system operated by other than directly applied human or animal effort

## 3.4 Safety related parts

## 3.4.1

## catching device

device which holds the load carrying device in case of failure of a lifting element

## 3.4.2

## re-raising prevention device

device which prevents re-raising of load carrying device from the initial position in the event of failure of the lifting element

## 3.4.3

## automatic brake

braking device which is normally held on and which is released only by application of power

Note 1 to entry: Operation of the braking device is also instigated automatically by releasing the lift controls and by interruption of the power supply.

## 3.4.4

## self braking system

system which, due to its inherent resistance to movement, stops the movement of the load carrying device when the drive power is interrupted

# 3.4.5 safety switch **iTeh STANDARD PREVIEW**

## switch which performs a safety function as defined in EN ISO 12100:2010, 3.30

Note 1 to entry: The whole of the specified opening of the contacts should be achieved by operation of the control mechanism through its intended travel using the Eforce stated by the manufacturer of the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states and the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states are stated by the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states are stated by the switch (see EN 60947-5-1:2017, K.2.1) the switch is intended travel using states are stated by the switch (see EN 60947-5-1:2017, K.2.1) the switch (see EN 60947-5-1:2017, K.2.

## 4 Safety requirements and/or measures

## 4.1 General

Machinery shall comply with the safety requirements and/or protective measures of this clause.

In addition, the machine shall be designed according to the principles of EN ISO 12100:2010 for relevant but not significant hazards which are not dealt with by this document.

## 4.2 Preventing unauthorised operation

Vehicle lifts shall be equipped with an accessible and fixed device that prevents unauthorized use after taking the lift out of operation (refer to Annex C (informative)).

## 4.3 Control devices

## 4.3.1 Hold-to-run control

Control devices shall be of the hold-to-run type. The functions of the command shall fulfil the conditions of performance level b of EN ISO 13849-1:2015. The stop-function shall comply with category 0 of EN 60204-1:2018, 9.2.2.

## 4.3.2 Grouped control devices

If the control devices for more than one vehicle lift are grouped together in one position each control device shall be clearly marked to show which vehicle lift it controls.
