**iTeh STANDARD PREVIEW**

This draft European Standard is submitted to CENELEC members for enquiry.  
Deadline for CENELEC: 2020-09-17.

It has been drawn up by CLC/TC 213.

If this draft becomes a European Standard, CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CENELEC in three official versions (English, French, German).  
A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

## 31 European foreword

32 This document (prEN 50626-2:2020) has been prepared by CLC/TC 213, "Cable management systems".

33 This document is currently submitted to the second Enquiry.

34 The following dates are proposed:

- latest date by which the existence of this document has to be announced at national level (doa) dor + 6 months
- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) dor + 12 months
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) dor + 36 months (to be confirmed or modified when voting)

35 This document has been prepared under a mandate given to CENELEC by the European Commission and the  
36 European Free Trade Association, and supports essential requirements of EU Directive(s).

37 For the relationship with EU Directive(s), see informative Annex ZZ, which is an integral part of this document.

## 38 Introduction

39 CENELEC TC 213 is responsible for the development of the EN 50626 series, which consists of two separate  
40 parts, each covering different products/applications.

41 This document covers requirements and tests for conduit systems buried underground for the protection and  
42 management of insulated conductors and/or power cables or communication cables having a specified  
43 performance time and which are leak-tight solid wall conduit systems and manufactured in PE, PP and PVC-U.

44 prEN 50626-1 covers requirements and tests for conduit systems buried underground for the protection and  
45 management of insulated conductors and/or power cables or communication cables.

46 For on-site storage, use CEN/TR 1046 as a guidance.

47 A conduit system buried underground that conforms to this document is deemed to be safe for use.

48 This is a European Standard for cable management products used for electro-technical purposes. It relates to the  
49 Council Directives on the approximation of laws, regulations and administrative provisions of the Member States  
50 relating to Low Voltage Directive 2014/35/EU through consideration of the essential requirements of this directive.

51 This document is supported by separate standards to which references are made.

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[oSIST prEN 50626-2:2020](https://standards.iteh.ai/catalog/standards/sist/93916afa-c46a-409d-920f-9cfbf83566d/osist-pren-50626-2-2020)

<https://standards.iteh.ai/catalog/standards/sist/93916afa-c46a-409d-920f-9cfbf83566d/osist-pren-50626-2-2020>

## 52 1 Scope

53 This document specifies requirements and tests for PE, PP and PVC-U leak-tight solid wall conduit systems with  
54 circular cross section, manufactured individually or as part of an assembly having a specified performance time  
55 and buried underground to a maximum depth of 6 m for the protection and management of insulated conductors  
56 and/or power cables or communication cables.

57 Applications that require leak-tight solid wall conduit systems are:

- 58 — installation of cables in conduits by blowing;
- 59 — installation of cables in conduits by floating;
- 60 — trenchless installation of conduits.

61 This document is applicable to conduits with or without integral socket and fittings.

62 NOTE 1 Conduits in which cables are installed by blowing or floating can also be installed by conventional methods.

63 NOTE 2 Installation of cables can also be done by pulling and pushing.

64 NOTE 3 Within a thermoplastic conduit system, fittings made of other materials can be used but they are not specified in  
65 this document.

66 NOTE 4 It is the responsibility of the purchaser or specifier to take into account any relevant national regulations and  
67 installation practices or codes when selecting the products to be installed, based on the characteristics specified in this  
68 document.

69 NOTE 5 Microducts are covered by the relevant part of the EN 60794 series.

### 124 3 Terms and definitions

125 For the purposes of this document, the terms and definitions given in EN ISO 472:2001 and EN ISO 1043-1:2011<sup>3</sup>  
 126 and the following apply.

127 ISO and IEC maintain terminological databases for use in standardization at the following addresses:

128 — ISO Online browsing platform: available at <https://www.iso.org/obp>

129 — IEC Electropedia: available at <http://www.electropedia.org/>

#### 130 3.1

#### 131 performance time

132 predicted service time of the installed conduit

133 Note 1 to entry: The service time considers continuous external loads and occasional internal loads. Both types of loads  
 134 are to be considered when the predicted service time is declared

#### 135 3.2

#### 136 solid wall conduit

137 conduit with smooth external surface and where the internal surface may be smooth or with internal longitudinal  
 138 grooves

#### 139 3.3

#### 140 non-virgin material

141 own or external reprocessed material or recycled material

iTeh STANDARD PREVIEW  
 (standards.itih.ai)  
<https://standards.itih.ai/catalog/standards/sist/93916afa-c46a-409d-920f-9c1bf683566d/osist-pr-en-50626-2-2020>

#### 142 3.4

#### 143 own reprocessed material

144 material prepared from rejected unused conduits and conduit fittings, including trimmings from the production,  
 145 that will be reprocessed in a manufacturer's plant after having been previously processed by the same  
 146 manufacturer by a process such as moulding or extrusion and for which the complete formulation is known

#### 147 3.5

#### 148 external reprocessed material

149 material prepared from unused thermoplastics products regardless of where those products were manufactured

#### 150 3.6

#### 151 recycled material

152 material prepared from used thermoplastic products which have been cleaned and crushed or ground

#### 153 3.7

#### 154 agreed specification

155 specification of the relevant material characteristics agreed between the supplier of the non-virgin material and  
 156 the conduits and/or conduit fittings manufacturer

157 **4 Symbols and abbreviations**158 **4.1 Symbols**

$A_{\min}$	minimum length of engagement
$d_{em}$	mean outside diameter
$d_n$	nominal outside diameter
$d_{sm}$	mean inside diameter of a socket
$e_{\min}$	minimum wall thickness
$e_2$	wall thickness of a socket
$e_3$	wall thickness in the groove area
$L_{1\min}$	length of spigot

159 **4.2 Abbreviations**

DN	nominal size
DN/OD	nominal size, outside diameter related
OIT	oxidation induction time
PE	polyethylene
PP	polypropylene
PVC-U	unplasticized poly(vinyl chloride)
SDR	standard dimension ratio
SN	nominal ring stiffness
TIR	true impact rate

160 **5 Material**161 **5.1 Unplasticized poly(vinyl chloride) (PVC-U)**

162 The material shall be a mixture of PVC-U to which are added additives, and if applicable non-virgin material, that  
163 shall allow the final product to comply with the requirements of this document.

164 When tested in accordance with the test methods as specified in Table 1 using the indicated parameters, the  
165 formulation shall have characteristics conforming to the requirements given in Table 1, for the chosen  
166 performance time 25, 50 or 100 years.

167 NOTE If the 100 year test is passed, the requirements for 25 and 50 year are deemed to be fulfilled.

168 **Table 1 — Formulation characteristics of PVC-U conduits**

Characteristic	Requirements	Test parameters		Test method
		End caps	Type A or Type B	
Resistance to internal pressure for performance time minimum 25 year	No failure during the test period	Orientation	Free	EN ISO 1167-1:2006 and EN ISO 1167-2:2006
		Number of test pieces	3	
		Test temperature	60 °C	
		Circumferential stress	2,0 MPa	

Characteristic	Requirements	Test parameters		Test method
		Conditioning period	Shall conform to EN ISO 1167-1:2006	
		Type of test	Water-in-water	
		Test period	165 h	
Vicat (VST) for performance time minimum 25 year	$\geq 76 \text{ }^{\circ}\text{C}$			EN ISO 2507-1:2017
Resistance to internal pressure for performance time minimum 50 year	No failure during the test period	End caps	Type A or Type B	EN ISO 1167-1:2006 and EN ISO 1167-2:2006
		Orientation	Free	
		Number of test pieces	3	
		Test temperature	60 $^{\circ}\text{C}$	
		Circumferential stress	8,0 MPa	
		Conditioning period	Shall conform to EN ISO 1167-1:2006	
		Type of test	Water-in-water	
		Test period	165 h

		Test period	1000 h	
Vicat (VST) for performance time minimum 100 year	$\geq 79 \text{ }^{\circ}\text{C}$			EN ISO 2507-1:2017

## 169 5.2 Polypropylene (PP)

170 The material shall be a mixture of PP to which are added additives, and if applicable non-virgin material, that shall  
171 allow the final product to comply with the requirements of this document.

172 When tested in accordance with the test methods as specified in Table 2 using the indicated parameters, the  
173 compound shall have characteristics conforming to the requirements given in Table 2, for the chosen performance  
174 time 25, 50 or 100 years.

175 NOTE If the 100 year test is passed, the requirements for 25 and 50 year are deemed to be fulfilled.

Table 2 — Compound characteristics of PP conduits

Characteristic	Requirements	Test parameters		Test method
		End caps	Type A or Type B	
Resistance to internal pressure performance time minimum 25 year	No failure during the test period	End caps	Type A or Type B	EN ISO 1167-1:2006 and EN ISO 1167-2:2006
		Test temperature	80 °C	
		Orientation	Free
