iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN 15876-2:2017

<https://standards.iteh.ai/catalog/standards/sist/613850ce-7f04-479c-b4a8-662aef0db8df/sist-en-15876-2-2017>

EN 15876-2:2016 (E)**European foreword**

This document (EN 15876-2:2016) has been prepared by Technical Committee CEN/TC 278 "Intelligent Transport Systems", the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2017, and conflicting national standards shall be withdrawn at the latest by April 2017.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

This document supersedes EN 15876-2:2011.

This edition incorporates the following main technical changes compared to the previous version:

- amendments to reflect changes to the underlying "requirements standard" (i.e. EN 15509:2014), notably the amended definition of vehicle licence plate number;
- amendments of terms, in order to reflect the harmonization of terms across electronic fee collection (EFC) standards.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

CEN/TC 278 (WG 1) has produced a set of standards that support interoperable DSRC-EFC-systems (e.g. EN ISO 14906), a "toolbox" for defining EFC-application transaction, and CEN ISO/TS 14907-2 (EFC conformance test for the on-board unit application interface). However, these standards are only of an enabling nature and do not guarantee unambiguous technical interoperability. Therefore the standard profile Electronic fee collection – Interoperable application profile for DSRC (EN 15509) was developed to support technical interoperability between EFC-systems.

This document forms Part 2 of a two-part European Standard:

- 1 EN 15876-1, *Electronic fee collection – Evaluation of on-board and roadside equipment for conformity to EN 15509 – Part 1: Test suite structure and test purposes*
- 2 EN 15876-2, *Electronic fee collection – Evaluation of on-board and roadside equipment for conformity to EN 15509 – Part 2: Abstract test suite*

Part 1 of the standard defines the test suite structure and the test purposes for conformity evaluation of OBEs and RSE designed for compliance with the requirements set in EN 15509. A test standard for evaluation of conformity of on-board and roadside equipment is a necessary element for coherent, practical and effective appraisal of products' compliance to EN 15509.

Part 2 of the European Standard (this standard) provides the Abstract Test Suite (ATS), which are translations of the "human-readable" TSS&TP suite into Tree and Tabular Combined Notation (TTCN). The ATS is based on the TTCN test script language that is suitable for implementation in computer-aided test tools and for specification of test cases and steps for assessment of protocol and application behaviour. TTCN is a widespread dedicated test programming language for compliance testing and is standardized in ISO/IEC 9646-3. The TTCN language is supported by modern automated tools that accelerate software design, implementation and testing.

Together, the two parts of EN 15876 provide the necessary foundation for implementation of the interoperability requirements as stated in EN 15509:

- industry is provided with an easy-to-use toolbox for product assessment;
- operators can easily assess conformity to EN 15509 and reference to the standard in tendering processes;
- authorities and joint undertakings may reference to the test standard when stating interoperability requirements;
- certification organisations are given an effective tool for certification of products.

This part of EN 15876 is based on:

- EN 15509:2014,
- the set of dedicated short range communication (DSRC) standards defining the communication stack, and
- ISO/IEC 9646.

EN 15876-2:2016 (E)

1 Scope

This European Standard specifies the abstract test suite (ATS) to evaluate the conformity of on-board equipment (OBE) and roadside equipment (RSE) to EN 15509 in accordance with the test suite structure and test purposes defined in EN 15876-1:2016.

The objective of the present document is to provide a basis for conformance tests for DSRC equipment (OBE and RSE) to support interoperability between different equipment supplied by different manufacturers.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ETSI/TS 102 486-2-3, V1.2.1 (2008-10), *Electromagnetic compatibility and Radio spectrum Matters (ERM); Road Transport and Traffic Telematics (RTTT); Test specifications for Dedicated Short Range Communication (DSRC) transmission equipment; Part 2: DSRC application layer; Sub-Part 3: Abstract Test Suite (ATS) and partial PIXIT proforma*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

STANDARD PREVIEW (standards.iteh.ai)

attribute addressable package of data consisting of a single data element or structured sequences of data elements

5 Abstract Test Method (ATM)**5.1 General**

This clause describes the abstract test method (ATM) used to test the layers at the OBE side and at the RSE side.

5.2 Test architecture

ETSI/TS 102 486-1-3:2009, Clause 4 and ETSI/TS 102 486-2-3:2009, Clause 4 describe the test architecture for their respective layers for testing. As test purposes (TPs) from ETSI/TS 102 486-1-3

and ETSI/TS 102 486-2-3 are referenced to in EN 15876-1, the test architectures presented there are also relevant for the corresponding test cases (TCs). For all specific TPs introduced in EN 15876-1, the test architecture defined in ETSI/TS 102 486-2-3 is relevant too.

6 Untestable Test Purposes (TP)

This clause gives a list of TPs, which are not implemented in the abstract test suite (ATS) due to the chosen abstract test method (ATM) or other restrictions.

NOTE The abbreviation OBU, rather than OBE, is used in the naming of test purposes for historical reasons and for direct correspondence with ETSI/TS 102 486-1-3, ETSI/TS 102 486-2-3 and EN 15876-1.

Table 1 — Untestable TPs

Test purpose	Reason
TP/PHY/OBU/BV/01	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/02	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/03	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/04	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/05	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/06	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/07	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/08	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/OBU/BV/09	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/RSE/BV/01	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/RSE/BV/02	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/RSE/BV/03	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/RSE/BV/04	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
TP/PHY/RSE/BV/05	Physical layer tests are to be performed in a radio wave lab. They do not form part of the ATS.
