Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 18098 was prepared by Technical Committee ISO/TC 163, Thermal performance and energy use in the built environment, Subcommittee SC 1, Test and measurement methods.

ISO 18098 includes the original EN 13470 prepared by Technical Committee CEN/TC 88, Thermal insulating materials and products. However, the following have been modified to reflect conditions for tronical countries: tropical countries:

- 6.4 "Conditioning of test specimens" standards.iteh.ai)
- 7.1 "Test conditions"; and

ISO 18098:2013 <u>Clause 10</u> "Test report". <u>Clause 10</u> "Test report". 3b2172e31de4/iso-18098-2013

iv

Introduction

This International Standard is one of a series of existing European Standards on test methods for products used to insulate building equipment and industrial installations which comprises the following group of International Standards:

ISO standard	Title	Respective EN standard
ISO 12623	Thermal insulating products for building equipment and industrial installations — Determination of short-term water absorption by partial immersion of preformed pipe insulation	- EN 13472
ISO 12624	Thermal insulating products for building equipment and industrial installations — Determination of trace quantities of water soluble chloride, fluoride, silicate, sodium ions and pH	- EN 13468
ISO 12628	Thermal insulating products for building equipment and industrial installations — Determination of dimensions, squareness and linearity of preformed pipe insula- tion	- EN 13467
ISO 12629	Thermal insulating products for building equipment and industrial installations – Determination of water vapour transmission properties of preformed pipe insula- tion	- EN 13469
ISO 18096	Thermal insulating products for building equipment and industrial installations — Determination of maximum service temperature for preformed pipe insulation	- EN 14707
ISO 18097	Thermal insulating products for building equipment and industrial installations – Determination of maximum service temperature	- EN 14706
ISO 18098	ISO 18098-2013 Thermal insulating products for building equipment and industrial installations – Determination of the apparent density of preformed pipe insulation	- EN 13470
ISO 18099	Thermal insulating products for building equipment and industrial installations — Determination of the coefficient of thermal expansion	- EN 13471

ISO 18098:2013(E)

A further series of existing European Standards on test methods was adopted by ISO. This "package" of standards comprises the following group of interrelated standards:

ISO standard	Title	Respective EN standard
ISO 12344	Thermal insulating products for building applications — Determination of bending behaviour	g EN 12089
ISO 12968	Thermal insulation products for building applications — Determination of the pull-off resistance of external thermal insulation composite systems (ETICS) (foan block test)	EN 13495 1
ISO 29465	Thermal insulating products for building applications — Determination of length and width	EN 822
ISO 29466	<i>Thermal insulating products for building applications — Determination of thick-</i> <i>ness</i>	EN 823
ISO 29467	Thermal insulating products for building applications — Determination of square- ness	- EN 824
ISO 29468	Thermal insulating products for building applications — Determination of flatnes	s EN 825
ISO 29469	Thermal insulating products for building applications — Determination of com- pression behaviour	EN 826
ISO 29470	Thermal insulating products for building applications R Determination of the apparent density	EN 1602
ISO 29471	Thermal insulating products for building applications — Determination of dimen- sional stability under constant normal laboratory conditions (23 degrees C/50 % relative humidity)	EN 1603
ISO 29472	relative humidity) https://standards.iteh.ai/catalog/standards/sist/01194d05-3497-4531-956f- Thermal insulating products for building applications ²⁰¹³ Determination of dimen- sional stability under specified temperature and humidity conditions	EN 1604
ISO 29764	Thermal insulating products for building applications — Determination of defor- mation under specified compressive load and temperature conditions	EN 1605
ISO 29765	Thermal insulating products for building applications — Determination of tensile strength perpendicular to faces	EN 1607
ISO 29766	Thermal insulating products for building applications — Determination of tensile strength parallel to faces	EN 1608
ISO 29767	Thermal insulating products for building applications — Determination of short- term water absorption by partial immersion	EN 1609
ISO 29768	Thermal insulating products for building applications — Determination of linear dimensions of test specimens	EN 12085
ISO 29769	Thermal insulating products for building applications — Determination of behav- iour under point load	EN 12430
ISO 29770	Thermal insulating products for building applications — Determination of thick- ness for floating-floor insulating products	EN 12431
ISO 29771	Thermal insulating materials for building applications — Determination of organi content	cEN 13820
ISO 29803	Thermal insulation products for building applications — Determination of the resistance to impact of external thermal insulation composite systems (ETICS)	EN 13497

The Application of Agreement on technical cooperation between ISO and CEN (Vienna Agreement), Modes 1, 2, 4, and 5, was not approved by CEN/TC 88 and the necessity not seen by its stakeholders.

This International Standard is one of a series of standards which specify test methods for determining dimensions and properties of thermal insulating materials and products. The original EN 13470 supports a series of product standards for thermal insulating materials and products which derive from the Council Directive of 21 December 1988 on the approximation of laws, regulations, and administrative provisions of the Member States relating to construction products (Directive 89/106/EEC) through the consideration of the essential requirements.

This International Standard has been prepared for products used to insulate building equipment and industrial installations, but it may also be applied to products used in other areas.

Thermal insulating products for building equipment and industrial installations — Determination of the apparent density of preformed pipe insulation

1 Scope

This International Standard specifies the equipment and procedures for determining the apparent overall density and the apparent core density under reference conditions. It is applicable to full-size thermal insulating products and test specimens of preformed pipe insulation.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

Terms and definitions (standards.iteh.ai) 3

For the purposes of this document, the following terms and definitions apply.

ISO 18098:2013

3.1 https://standards.iteh.ai/catalog/standards/sist/01194d05-3497-4531-956fapparent overall density

3b2172e31de4/iso-18098-2013

ρ_{a}

mass per unit volume of a product, including all surface skins formed during production, but excluding any facings and/or coatings

3.2

apparent core density

 $\rho_{\rm c}$

mass per unit volume of the core of a product after all surface skins formed during production and all facings and/or coatings have been removed

4 Principle

The density is determined as the quotient of the mass and the volume of the test specimen.

Apparatus 5

Balance, capable of determining the mass of a test specimen to an accuracy of 0,5 %. 5.1

Equipment, for the determination of the dimensions of preformed pipe insulation (see <u>7.2</u>). 5.2
