

Designation: F1058 – 08

Standard Specification for Wrought 40Cobalt-20Chromium-16Iron-15Nickel- 7Molybdenum Alloy Wire and Strip for Surgical Implant Applications (UNS R30003 and UNS R30008)¹

This standard is issued under the fixed designation F1058; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This specification covers the chemical, mechanical, and metallurgical requirements for two grades of wrought 40cobalt-20chromium-16iron-15nickel-7molybdenum alloy in the form of wire and strip used for the manufacture of surgical implants.

1.2 The values stated in SI units are to be regarded as standard. The inch-pound equivalents of the SI units in parentheses are for information only.

*A Summary of Changes section appears at the end of this standard

- 4.1.1 Quantity (weight or number of pieces),
- 4.1.2 ASTM designation, grade, and date of issue,
- 4.1.3 Form (wire or strip),
- 4.1.4 Applicable dimensions, including size, thickness, width, and length (exact, random, multiples) and tolerances where critical, and drawing number,
- 4.1.5 Condition,
- 4.1.6 Finish,
- 4.1.7 Mechanical properties, if applicable, for special conditions,
- 4.1.8 Special tests (if any), and
- 4.1.9 Other requirements (if applicable).

5. Materials and Manufacture

5.1 *Condition*—Wire and strip shall be furnished to the purchaser in the annealed, cold worked, or cold worked and aged condition.

5.2 *Finish*:

5.2.1 Types of finish available for wire are bright-annealed, pickled, cold-drawn, ground, ground and polished, or as specified in the purchase order.

5.2.2 Types of finish available for strip are bright-annealed, pickled, cold-rolled, polished, or as specified in the purchase order.

6. Chemical Requirements

6.1 The heat analysis shall conform to the chemical requirements of Grade 1 or 2 as specified in **Table 1**. The supplier shall not ship material that is outside the limits specified in **Table 1** for the applicable grade.

6.1.1 Requirements for the major and minor elemental constituents for Grade 1 and 2 of this alloy are listed in **Table 1**. Also listed are important residual elements. Analysis for elements not listed in **Table 1** is not required to verify compliance with this specification.

6.2 *Product Analysis* The product analysis is either for the purpose of verifying the composition of a heat or lot or to determine variations in the composition within a heat.

6.2.1 Acceptance or rejection of a heat or lot of material may be made by the purchaser on the basis of this product analysis.

6.2.2 Product analysis tolerances do not broaden the specified heat analysis requirements, but cover variations between laboratories in the measurement of chemical content. The manufacturer shall not ship material that is outside the limits specified in **Table 1**. Product analysis limits shall be specified in **Table 2**.

6.3 Methods and practices relating to chemical analysis required by this specification shall be in accordance with Test Methods, Practices, and Terminology **A751**.

7. Mechanical Requirements

7.1 *Tensile Properties*:

7.1.1 Perform tension tests per Test Methods **E8**. Should any of the test specimens not meet the specified requirements, test two additional test pieces representative of the same lot, in the same manner, for each failed test piece. The lot shall be considered in compliance only if all additional test pieces meet the specified requirements.

7.1.2 Tensile test results for which any specimen fractures outside the gage length shall be considered acceptable if the elongation meets the minimum requirements specified. Refer to subsections 7.11.4 and 7.11.5 of Test Methods **E8**. If the elongation is less than the minimum requirement, discard the test and retest. Retest one specimen for each specimen that did not meet the minimum requirement.

7.1.3 The mechanical properties of test specimens shall conform to the appropriate mechanical requirements specified in **Table 3**, **Table 4**, **Table 5**, **Table 6**, or **Table 7**.

7.2 *Hardness*:

7.2.1 When desired, hardness properties may be specified. Test Methods **E18** or **E92** and Tables **E140** shall be used. Hardness determination of cold worked or cold worked and aged material shall be made on a product cross section, midway between the center and surface, if the cross section size is adequate.

7.2.2 Hardness values are for information only and shall not be used as a basis for rejection.

8. Special Tests and Requirements
