846:2019)**

Plastiques - Évaluation de l'action des micro-
organismes (ISO 846:2019)

Kunststoffe - Bestimmung der Einwirkung von
Mikroorganismen auf Kunststoffe (ISO 846:2019)

This European Standard was approved by CEN on 5 March 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN ISO 846:2019) has been prepared by Technical Committee ISO/TC 61 "Plastics" in collaboration with Technical Committee CEN/TC 249 "Plastics" the secretariat of which is held by NBN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2019, and conflicting national standards shall be withdrawn at the latest by October 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN ISO 846:1997.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

SIST EN ISO 846:2019

<https://standards.iteh.ai/catalog/standards/sist/ea8ed8d1-069d-4147-8e0f-d724698686fc/sist-en-iso-846-2019>

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 6, *Ageing, chemical and environmental resistance*.

This third edition cancels and replaces the second edition (ISO 846:1997), which has been technically revised. The main changes compared to the previous edition are as follows.

- The size of the test specimens has been defined as $(50 \text{ mm} \pm 1 \text{ mm}) \times (50 \text{ mm} \pm 1 \text{ mm})$. A fixed size allows the determination of any edge effects associated with the area 5 mm from the outer edge (see new [Annex C](#)). In this way, the evaluation of growth on the test specimens is harmonized.
- New [Annexes B](#) and [C](#) have been added and the old annexes have been renumbered.
- The former [Annex C](#) has been updated and renumbered as [Annex D](#).
- Test A only:

Stainless steel coupons acting as negative control specimens have been introduced to provide a reference for where fungal growth occurs in the Petri dish, even though no nutrients have been added to the test design.

The test design does not use an agar-medium any more to provide the source of moisture to allow $95 \% \pm 5 \%$ relative humidity to be achieved. Instead the test specimens are stored in closed containers that include a water reservoir to provide a relative humidity $95 \% \pm 5 \%$ around the test specimens during incubation;

A grid has been introduced for use during the evaluation of the area of growth observed on the surface of the test specimens. The use of the grid provides and objective mechanisms for assessing growth and is explained in the new [Annex C](#).

- Test B has been deleted.
- Positive control specimens (test specimens that allow fungal growth) have been introduced to allow the determination of basic fungistatic effects of samples that contain biocides.

ISO 846:2019(E)

- The fungal inoculum has been revised to be consistent with other referenced test standards and changes to the names of fungal strains have been incorporated.
- The media used in the test have been revised based on the experience of various laboratories.
- A staining method has been proposed to aim assessment.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

SIST EN ISO 846:2019

<https://standards.iteh.ai/catalog/standards/sist/ea8ed8d1-069d-4147-8e0f-d724698686fc/sist-en-iso-846-2019>

Introduction

Under certain climatic and environmental conditions, microorganisms can settle on and colonize the surface of plastics or plastics products. Their presence and/or their metabolic products might not only damage the plastic itself, but can also affect the serviceability of building materials and systems containing plastic parts.

The tests and test conditions specified in this document are empirical and cover most but not all potential applications.

For specific applications and for long-term tests, procedures which reflect performance under actual conditions are agreed upon.

The actions of microorganisms on plastics are influenced by two different processes.

- a) Direct action: the deterioration of plastics which serve as a nutritive substance for the growth of the microorganisms.
- b) Indirect action: the influence of metabolic products of the microorganisms, e.g. discolouration or further deterioration.

This document deals with both processes as well as their combined action.

Changes to the method are based on discussions among laboratories that have performed the test for at least 5 years. On an international level, discussions have taken place within the Plastic Group of the International Biodeterioration Research Group (IBRG) between scientists with extensive experience with this document as well as the testing of the interaction between microorganisms and plastics.
