iTeh STANDARD PREVIEW (standards.iteh.ai)

ISO/IEC 15444-12:2012

https://standards.iteh.ai/catalog/standards/sist/3cec7836-07ae-4519-b547-
1846bb8a54a4/iso-iec-15444-12-2012

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

ISO/IEC 15444-12 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

This fourth edition cancels and replaces the third edition (ISO/IEC 15444-12:2008) of which it constitutes a minor revision. It also incorporates the Amendment ISO/IEC 15444-12:2008/Amd.1:2009 and the Technical Corrigenda ISO/IEC 15444-12:2008/Cor.1:2008, ISO/IEC 15444-12:2008/Cor.2:2009, ISO/IEC 15444-12:2008/Cor.3:2009, and ISO/IEC 15444-12:2008/Cor.4:2011.

ISO/IEC 15444 consists of the following parts, under the general title *Information technology — JPEG 2000 image coding system*:

[ISO/IEC 15444-12:2012](#)

- *Part 1: Core coding system* <https://standards.iteh.ai/catalog/standards/sist/3cec7836-07ae-4519-b547-1846bb8a54a4/iso-iec-15444-12-2012>

¹ To be published.

This corrected version of ISO/IEC 15444-12:2012 incorporates the corrections made by ISO/IEC 15444-12:2008 draft Technical Corrigendum 5 (unpublished).

iTeh STANDARD PREVIEW (standards.iteh.ai)

[ISO/IEC 15444-12:2012](#)

<https://standards.iteh.ai/catalog/standards/sist/3cec7836-07ae-4519-b547-1846bb8a54a4/iso-iec-15444-12-2012>

Introduction

The ISO Base Media File Format is designed to contain timed media information for a presentation in a flexible, extensible format that facilitates interchange, management, editing, and presentation of the media. This presentation may be ‘local’ to the system containing the presentation, or may be via a network or other stream delivery mechanism.

The file structure is object-oriented; a file can be decomposed into constituent objects very simply, and the structure of the objects inferred directly from their type.

The file format is designed to be independent of any particular network protocol while enabling efficient support for them in general.

The ISO Base Media File Format is a base format for media file formats.

It is intended that the ISO Base Media File Format shall be jointly maintained by WG1 and WG11. Consequently, a subdivision of work created ISO/IEC 15444-12 and ISO/IEC 14496-12 in order to document the ISO Base Media File Format and to facilitate the joint maintenance.

This technically identical text is published as ISO/IEC 14496-12 for MPEG-4, and as ISO/IEC 15444-12 for JPEG 2000, and reference to this specification should be made accordingly. The recommendation is to reference one, for example ISO/IEC 14496-12, and append to the reference a parenthetical comment identifying the other, for example “(technically identical to ISO/IEC 15444-12)”.

The International Organization for Standardization (ISO) and International Electrotechnical Commission (IEC) draw attention to the fact that it is claimed that compliance with this document may involve the use of patents.

<https://standards.ieee.org/iso/iec/15444-12-2012>

The ISO and IEC take no position concerning the evidence, validity and scope of this patent right.

The holder of this patent right has assured the ISO and IEC that he is willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of this patent right is registered with the ISO and IEC. Information may be obtained from the companies listed in Annex B.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified in Annex B. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO (www.iso.org/patents) and IEC (<http://patents.iec.ch>) maintain on-line databases of patents relevant to their standards. Users are encouraged to consult the databases for the most up to date information concerning patents.

Information technology — JPEG 2000 image coding system — Part 12: ISO base media file format

1 Scope

This part of ISO/IEC 15444 specifies the ISO base media file format, which is a general format forming the basis for a number of other more specific file formats. This format contains the timing, structure, and media information for timed sequences of media data, such as audio-visual presentations.

This part of ISO/IEC 15444 is applicable to JPEG 2000, but its technical content is identical to that of ISO/IEC 14496-12, which is applicable to MPEG-4.

3.1 Terms and definitions

[ISO/IEC 15444-12:2012](#)

<https://standards.iteh.ai/catalog/standards/sist/3cec7836-07ae-4519-b547-1840808a54a4/iso-iec-15444-12-2012>

3.1.1

box

object-oriented building block defined by a unique type identifier and length

NOTE Called ‘atom’ in some specifications, including the first definition of MP4.

3.1.2

chunk

contiguous set of samples for one track

3.1.3

container box

box whose sole purpose is to contain and group a set of related boxes

NOTE Container boxes are normally not derived from ‘fullbox’

3.1.4

hint track

special track which does not contain media data, but instead contains instructions for packaging one or more tracks into a streaming channel

3.1.5

hinter

tool that is run on a file containing only media, to add one or more hint tracks to the file and so facilitate streaming

3.1.6**ISO Base Media File**

name of the files conforming to the file format described in this specification

3.1.7**leaf subsegment**

subsegment that does not contain any indexing information that would enable its further division into subsegments

3.1.8**media data box**

box which can hold the actual media data for a presentation ('mdat')

3.1.9**movie box**

container box whose sub-boxes define the metadata for a presentation ('moov')

3.1.10**presentation**

one or more motion sequences, possibly combined with audio

3.1.11**random access point (RAP)**

sample in a track that starts at the ISAU of a SAP of type 1 or 2 or 3 as defined in Annex I

NOTE Informally, a sample, from which when decoding starts, the sample itself and all samples following in composition order can be correctly decoded.

iTeh STANDARD PREVIEW (standards.iteh.ai)

3.1.12**random access recovery point**

ISO/IEC 15444-12:2012

sample in a track with presentation time equal to the TSAP of a SAP of type 4 as defined in Annex I

<https://standards.iteh.ai/catalog/standards/sist/3cec7836-07ae-4519-b547-1846bb8a54a4/iso-iec-15444-12-2012>

NOTE Informally, a sample, that can be correctly decoded after having decoded a number of samples that is before this sample in decoding order, sometimes known as gradual decoding refresh.

3.1.13**sample**

all the data associated with a single timestamp

NOTE 1 No two samples within a track can share the same time-stamp.

NOTE 2 In non-hint tracks, a sample is, for example, an individual frame of video, a series of video frames in decoding order, or a compressed section of audio in decoding order; in hint tracks, a sample defines the formation of one or more streaming packets.

3.1.14**sample description**

structure which defines and describes the format of some number of samples in a track

3.1.15**sample table**

packed directory for the timing and physical layout of the samples in a track

3.1.16**sync sample**

sample in a track that starts at the ISAU of a SAP of type 1 or 2 as defined in Annex I

NOTE Informally, a media sample that starts a new independent sequence of samples; if decoding starts at the sync sample, it and succeeding samples in decoding order can all be correctly decoded, and the resulting set of decoded
