## Foreword

This European Telecommunication Standard (ETS) has been produced by the Signalling Protocols & Switching (SPS) Technical Committee of the European Telecommunications Standards Institute (ETSI).

In accordance with CCITT Recommendation I.130 [1], the following three level structure is used to describe the supplementary telecommunications services as provided by European public telecommunications operators under the pan-European Integrated Services Digital Network (ISDN):

- Stage 1: is an overall service description, from the user's standpoint;
- Stage 2: identifies the functional capabilities and information flows needed to support the service described in stage 1; and
- Stage 3: defines the signalling system protocols and switching functions needed to implement the service described in stage 1.

This ETS details the stage two aspects (functional capabilities and information flows) needed to support the Calling Line Identification Presentation and Restriction (CLIP and CLIR) supplementary services. The stage 1 aspects are detailed in ETS 300 089 (1992) and ETS 300 090 (1992), and the stage three aspects in ETS 300 092 (1992) and ETS 300 093 (1992), respectively.
