This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 459/SC 10.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

prEN 10217-7:2019 (E)**European foreword**

This document (prEN 10217-7:2019) has been prepared by Technical Committee ECISS/TC 110 “Steel tubes and iron and steel fittings”, the secretariat of which is held by UNI.

This document is currently submitted to the CEN Enquiry.

This document supersedes EN 10217-7:2014.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive 2014/68/EU.

For relationship with EU Directive 2014/68/EU (formerly 97/23/EC), see informative Annex ZA, which is an integral part of this document.

This European Standard consists of the following parts, under the general title *Welded steel tubes for pressure purposes — Technical delivery conditions*:

- *Part 1: Electric welded and submerged arc welded non-alloy steel tubes with specified room temperature properties*
- *Part 2: Electric welded non-alloy and alloy steel tubes with specified elevated temperature properties*
- *Part 3: Electric welded and submerged arc welded alloy fine grain steel tubes with specified room, elevated and low temperature properties*
- *Part 4: Electric welded non-alloy and alloy steel tubes with specified low temperature properties*
- *Part 5: Submerged arc welded non-alloy and alloy steel tubes with specified elevated temperature properties*
- *Part 6: Submerged arc welded non-alloy steel tubes with specified low temperature properties*
- *Part 7: Stainless steel tubes*

Another European Standard series covering tubes for pressure purposes is:

EN 10216, Seamless steel tubes for pressure purposes.

1 Scope

This Part of EN 10217 specifies the technical delivery conditions in two test categories for welded tubes of circular cross-section made of austenitic and austenitic-ferritic stainless steel which are intended for pressure and corrosion resisting purposes at room temperature, at low temperatures or at elevated temperatures.

NOTE Once this document is published in the Official Journal of the European Union (OJEU) under Directive 2014/68/EU, pressure equipment directive, presumption of conformity to the Essential Safety Requirements (ESR) of Directive 2014/68/EU is limited to technical data of materials in this standard and does not presume adequacy of the material to a specific item of equipment. Consequently, the assessment of the technical data stated in this material standard against the design requirements of this specific item of equipment to verify that the ESRs of the Pressure Equipment Directive are satisfied, needs to be done by the designer or manufacturer of the pressure equipment, taking also into account the subsequent manufacturing processes which may affect properties of the base materials.

3 Terms and definitions

For the purpose of this document, the terms and definitions given in EN 10020, EN 10021, EN ISO 4885 and EN 10266 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

test category

classification that indicates the extent and level of inspection and testing

3.2

employer

organization for which a person works on a regular basis

Note 1 to entry: The employer may be either the tube manufacturer or supplier or a third party organization providing Non-Destructive Testing (NDT) services.

4 Symbols

For the purpose of this document, the symbols given in EN 10266 and the following apply.

- TC test category.

NOTE See also Table 2 for symbols of the delivery condition.

5 Classification and designation

5.1 Classification

According to the classification system in EN 10020, the steel grades are classified as:

- austenitic steels (corrosion resisting);
- austenitic-ferritic steels.

5.2 Designation

For the tubes covered by this Part of EN 10217 the steel designation consists of:

- the number of this Part of EN 10217 (EN 10217-7);

plus either:

- the steel name according to EN 10027-1;

prEN 10217-7:2019 (E)

or:

- the steel number allocated according to EN 10027-2.

6 Information to be supplied by the purchaser**6.1 Mandatory information**

The following information shall be supplied by the purchaser at the time of enquiry and order:

- a) the quantity (mass or total length or number);
- b) the term “tube”;
- c) the dimensions (outside diameter D and wall thickness T) (see 8.8.1);
- d) the designation of the steel grade according to this Part of EN 10217 (see 5.2);
- e) the test category (see 9.3).

6.2 Options

A number of options are specified in this Part of EN 10217 and these are listed below. In the event that the purchaser does not indicate a wish to implement any of these options at the time of enquiry and order, the tube shall be supplied in accordance with the basic specification (see 6.1).

- 1) Information about steelmaking process (see 7.1);
- 2) Tube manufacturing process and/or route (see 7.2.1);
- 3) The inside weld is remelted (see Table 1);
- 4) The inside weld is worked by rolling, remelting or grinding (see Table 1);
- 5) Delivery condition (see 7.2.3);
- 6) Product analysis (see 8.2.2);
- 7) Additional verifications of mechanical properties on samples that have undergone a different or additional heat treatment (see 8.3.1);
- 8) Verification of impact energy at room temperature (see 8.3.1);
- 9) Verification of proof strength $R_{p0,2}$ or $R_{p1,0}$ at elevated temperatures (see 8.3.2);
- 10) Verification of impact energy at low temperature (see 8.3.3);
- 11) Intergranular corrosion test (see 8.4);
- 12) Repair welding (see 8.5.1.5);
- 13) Selection of method for verification of leak-tightness test method (see 8.5.2.2);
- 14) Non-destructive testing of tube ends for detection of laminar imperfections (see 8.5.2.3);
- 15) Non-destructive testing of strip and plate edges for detection of laminar imperfections (see 8.5.2.3);

- 16) Special ends preparation (see 8.7);
- 17) Exact lengths (see 8.8.3);
- 18) Tolerance class D 4 for $D \leq 168,3$ mm (see Table 10);
- 19) The type of inspection certificate 3.2 in place of the standard document (see 9.2.1);
- 20) Transverse tensile test on the weld (see 10.2.2.3);
- 21) Test pressure for hydrostatic leak-tightness test (see 11.8.1);
- 22) Wall thickness measurement away from the ends (see 11.9);
- 23) Selection of non- destructive testing method for the inspection of the weld seam (see Table 16);
- 24) Image quality class B of EN ISO 10893-6 for the radiographic inspection of the weld seam (see Table 16);
- 25) Additional marking (see 12.2);
- 26) Special protection (see Clause 13);
- 27) Image quality class B of EN ISO 10893-7 for the digital radiographic testing of the weld (see Table 16);
- 28) Different values for the maximum height of the weld seam are to be agreed in the purchase order (see Table 11);
- 29) Height of the weld seam for tubes with route 01, 05, 06 and 07 (according to Table 1) and with thicknesses over 8 mm: maximum 4 mm (see Table 11).

6.3 Examples of an order

6.3.1 Example 1

2 000 m of welded tube W1 (see Table 2) with an outside diameter of 168,3 mm, a wall thickness of 4,5 mm, tolerance classes D 3 and T 3, in accordance with this Part of EN 10217, made of steel grade X2CrNi19-11, test category 1, with a 3.1 inspection certificate according to EN 10204:

EXAMPLE 2 000 m - Tube - 168,3 × 4,5 - EN 10217-7- X2CrNi19-11 - TC 1 - Option 5: W1

6.3.2 Example 2

300 m of cold finished welded tube WCA (see Table 2) with an outside diameter of 42,4 mm, a wall thickness of 2,6 mm, tolerance classes D 3 and T 3, in accordance with this Part of EN 10217, made of steel grade 1.4301, test category 2, with intergranular corrosion test (EN ISO 3651-2, method A), verification of proof strength at 300 °C, non-destructive testing of strip edges for detection of laminar imperfections, with a 3.2 inspection certificate according to EN 10204 issued by the manufacturer:

EXAMPLE 300 m - Tube - 42,4 × 2,6 - EN 10217-7 - 1.4301 - TC 2 - Option 5: WCA - Option 9: 300 °C - Option 11: A - Option 15 - Option 19: 3.2 (to be issued by the manufacturer)

7 Manufacturing process

7.1 Steelmaking process

The steelmaking process is at the discretion of the manufacturer, but see Option 1.

Option 1: *The purchaser shall be informed about the steelmaking process used. The process shall be reported in the inspection document.*

7.2 Tube manufacture and conditions

7.2.1 The tubes shall be manufactured from hot or cold rolled plate, sheet or strip in accordance with EN 10028-7. They shall be longitudinally welded by fusion across the abutting edges using either an arc welding or a laser welding or an electron beam welding process, or a combination thereof. The definitions of these respective fusion welding methods are given in ISO/TR 25901-3:2016, 4.2. Welding can be performed with or without the addition of filler metal in accordance with one of the routes as specified in Table 1.

Unless Option 2 is specified, the manufacturing process and/or route are at the discretion of the manufacturer.

Option 2: *The tube manufacturing process and/or route is specified by the purchaser.*

The finished tubes shall not include welds used for joining together lengths of the hot or cold rolled strip prior to forming.

Option 3: *(see Table 1).*

Option 4: *(see Table 1).*

7.2.2 The production (welding) process shall be qualified and approved under the tube manufacture's own QA system. For tubes to be used in pressure equipment under categories II, III, or IV of Directive 2014/68/EU (formerly 97/23/EC), the relevant operating procedures and personnel at the manufacturing mill shall be approved by a Notified Body or a recognized third party organization as per Article 20 of directive 2014/68/EU.

Table 1 — Tube manufacturing process, route, starting material, forming operation and weld condition

1	2	3	4	5
Route	Manufacturing process ^a	Starting material	Forming operation	Weld condition ^b
01	Arc welding	Hot or cold rolled strip	Continuous forming from strip	As welded ^{c e}
02				Welded, outside ground ^{c e} or bead worked [*]
03				Welded, bead worked [*]
04	Laser welding	Hot or cold rolled strip	Continuous forming from strip	Welded, outside ground ^c or bead worked [*]

1	2	3	4	5
05	Arc welding	Hot or cold rolled plate or sheet	Single forming from plate or sheet	As welded ^{d e}
06	Laser welding and arc welding ^{**}	Hot or cold rolled plate or sheet	Single forming from plate or sheet	As welded ^{d e}
07	Electron beam welding and arc welding ^{**}	Hot or cold rolled plate or sheet	Single forming from plate or sheet	As welded ^{d e}

* Bead worked = bead rolled or bead hammered.

** For these tubes, i.e. tubes welded from plate or sheet, the laser welding and the electron beam welding processes.

a For these tubes, i.e. tubes welded from plate or sheet, the laser welding and the electron beam welding processes are normally used in combination with an arc welding process.

b The terms “as-welded”, “welded, outside ground”, “bead worked” and “cold working” apply to the condition of the tube before heat treatment if required in accordance with Table 2.

c On request, the inside weld can be re-melted. **Option 3:** *The inside weld is re-melted.*

d On request, the inside weld can be worked by rolling, remelting or grinding. **Option 4:** *The inside weld is worked by rolling, remelting or grinding.*

e The weld seam can be welded using one or more separate layers.

kSIST FprEN 10217-7:2020
