Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the **GSM** logo are trademarks registered and owned by the **GSM Association**.

Legal Notice

[ETSI TS 136 104 V16.9.0 \(2021-04\)](#)

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

[71b84378a52f/etsi-ts-136-104-v16-9-0-2021-04](http://www.etsi.org/deliverable/136-104-v16-9-0-2021-04)

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

8	Performance requirement	177
8.1	General	177
8.2	Performance requirements for PUSCH	177
8.2.1	Requirements in multipath fading propagation conditions	177
8.2.1.1	Minimum requirements	178
8.2.2	Requirements for UL timing adjustment	197
8.2.2.1	Minimum requirements	198
8.2.3	Requirements for high speed train	198
8.2.3.1	Minimum requirements	199
8.2.4	Requirements for HARQ-ACK multiplexed on PUSCH	202
8.2.4.1	Minimum requirement	202
8.2.5	Requirements for PUSCH with TTI bundling and enhanced HARQ pattern	203
8.2.5.1	Minimum requirements	204
8.2.6	Enhanced performance requirement type A in multipath fading propagation conditions with synchronous interference	204
8.2.6.1	Minimum requirements	205
8.2.6A	Enhanced performance requirement type A in multipath fading propagation conditions with asynchronous interference	206
8.2.6A.1	Minimum requirements	207
8.2.7	Requirements for PUSCH supporting coverage enhancement	209
8.2.8	Requirements for PUSCH of Frame structure type 3	210
8.2.9	Enhanced performance requirement type B in multipath fading propagation conditions	211
8.2.9.1	Minimum requirements	213
8.2.10	Requirements for PUSCH supporting subPRB transmission	215
8.3	Performance requirements for PUCCH	217
8.3.1	DTX to ACK performance	217
8.3.1.1	Minimum requirement	217
8.3.2	ACK missed detection requirements for single user PUCCH format 1a	217
8.3.2.1	Minimum requirements	218
8.3.3	CQI performance requirements for PUCCH format 2	218
8.3.3.1	Minimum requirements	218
8.3.4	ACK missed detection requirements for multi user PUCCH format 1a	219
8.3.4.1	Minimum requirement	219
8.3.5	ACK missed detection requirements for PUCCH format 1b with Channel Selection	219
8.3.5.1	Minimum requirements	220
8.3.6	ACK missed detection requirements for PUCCH format 3	220
8.3.6.1	Minimum requirements	220
8.3.7	NACK to ACK requirements for PUCCH format 3	221
8.3.7.1	Minimum requirement	221
8.3.8	CQI performance requirements for PUCCH format 2 with DTX detection	221
8.3.8.1	Minimum requirements	222
8.3.9	PUCCH performance requirements for coverage enhancement	222
8.3.9.1	DTX to ACK performance	222
8.3.9.1.1	Minimum requirement	222
8.3.9.2	ACK missed detection requirements for single user PUCCH format 1a	222
8.3.9.2.1	Minimum requirements	223
8.3.9.3	CQI performance requirements for PUCCH format 2	223
8.3.9.3.1	Minimum requirements	223
8.3.10	ACK missed detection requirements for PUCCH format 4	223
8.3.10.1	Minimum requirements	224
8.3.11	ACK missed detection requirements for PUCCH format 5	224
8.3.11.1	Minimum requirements	224
8.4	Performance requirements for PRACH	225
8.4.1	PRACH False alarm probability	225
8.4.1.1	Minimum requirement	225
8.4.2	PRACH detection requirements	225
8.4.2.1	Minimum requirements	225
8.5	Performance requirements for Narrowband IoT	227
8.5.1	Requirements for NPUSCH format 1	227
8.5.1.1	Requirements	227
8.5.1.1.1	Minimum requirements	228
8.5.2	Performance requirements for NPUSCH format 2	229

8.5.2.1	DTX to ACK performance	229
8.5.2.1.1	Minimum requirement.....	229
8.5.2.2	ACK missed detection requirements	229
8.5.2.2.1	Minimum requirements	229
8.5.3	Performance requirements for NPRACH	230
8.5.3.1	NPRACH False alarm probability.....	230
8.5.3.1.1	Minimum requirement.....	230
8.5.3.2	NPRACH detection requirements	230
8.5.3.2.1	Minimum requirements	231
8.6	Performance requirements for subslot-PUSCH.....	231
8.6.1	Requirements	231
8.6.1.1	Minimum requirements	231
8.7	Performance requirements for SPUCC.....	232
8.7.1	ACK missed detection requirements for single user SPUCC format 1a	232
8.7.1.1	Minimum requirements	232
8.7.2	ACK missed detection requirements for SPUCC format 4	233
8.7.2.1	Minimum requirements	233
9	Void.....	234

Annex A (normative): Reference measurement channels235

A.1	Fixed Reference Channels for reference sensitivity and in-channel selectivity (QPSK, R=1/3)	236
A.2	Fixed Reference Channels for dynamic range (16QAM, R=2/3).....	237
A.3	Fixed Reference Channels for performance requirements (QPSK 1/3)	237
A.4	Fixed Reference Channels for performance requirements (16QAM 3/4)	238
A.5	Fixed Reference Channels for performance requirements (64QAM 5/6)	238
A.6	PRACH Test preambles	238
A.7	Fixed Reference Channels for UL timing adjustment (Scenario1)	239
A.8	Fixed Reference Channels for UL timing adjustment (Scenario 2)	240
A.9	Multi user PUCCH test.....	240
A.10	PUCCH transmission on two antenna ports test.....	240
A.11	Fixed Reference Channel for PUSCH with TTI bundling and enhanced HARQ pattern	241
A.12	Fixed Reference Channels for performance requirements (QPSK 0.36)	241
A.13	Fixed Reference Channels for performance requirements (16QAM 1/2)	242
A.14	Fixed Reference Channels for NB-IOT reference sensitivity ($\pi/2$ BPSK, R=1/3).....	242
A.15	Fixed Reference Channels for NB-IoT dynamic range ($\pi/4$ QPSK, R=2/3).....	242
A.16	Fixed Reference Channels for NB-IoT NPUSCH format 1	243
A.16.1	One PRB.....	243
A.17	Fixed Reference Channels for performance requirements (256QAM 5/6)	244
A.18	Fixed Reference Channels for PUSCH transmission in UpPTS (16QAM 0.65)	244
A.19	Fixed Reference Channels for PUSCH transmission in UpPTS (256QAM 0.69)	245
A.20	Fixed Reference Channels for PUSCH of Frame structure type 3	245
A.21	Fixed Reference Channels for performance requirements (QPSK 3/5)	246
A.22	Fixed Reference Channels for performance requirements (64QAM 1/2)	247
A.23	Fixed Reference Channels for SubPRB allocation reference sensitivity ($\pi/2$ BPSK, R=1/3).....	247
A.24	Fixed Reference Channel for subslot-PUSCH	248
A.25	Fixed Reference Channels for PUSCH with SubPRB transmission	248

Annex B (normative):	Propagation conditions.....	249
B.1	Static propagation condition.....	249
B.2	Multi-path fading propagation conditions	249
B.3	High speed train condition	250
B.4	Moving propagation conditions.....	254
B.5	Multi-Antenna channel models	255
B.5.1	Definition of MIMO Correlation Matrices.....	255
B.5.2	MIMO Correlation Matrices at High, Medium and Low Level	256
B.5A	Multi-Antenna channel models using cross polarized antennas.....	258
B.5A.1	Definition of MIMO Correlation Matrices using cross polarized antennas.....	259
B.5A.2	Spatial Correlation Matrices at UE and eNB sides.....	260
B.5A.2.1	Spatial Correlation Matrices at UE side.....	260
B.5A.2.2	Spatial Correlation Matrices at eNB side.....	260

B.6	Interference model for enhanced performance requirements type A and type B	260
B.6.1	Dominant interferer proportion	261
B.6.2	Interference model for synchronous scenario.....	261
B.6.3	Interference model for asynchronous scenario	261
Annex C (normative):	Characteristics of the interfering signals.....	262
Annex D (normative):	Environmental requirements for the BS equipment	263
Annex E (normative):	Error Vector Magnitude	264
E.1	Reference point for measurement.....	264
E.2	Basic unit of measurement	264
E.3	Modified signal under test.....	265
E.4	Estimation of frequency offset	265
E.5	Estimation of time offset	265
E.5.1	Window length	266
E.6	Estimation of TX chain amplitude and frequency response parameters	268
E.7	Averaged EVM	269
Annex F (Informative):	Unwanted emission requirements for multi-carrier BS	271
F.1	General	271
F.2	Multi-carrier BS of different E-UTRA channel bandwidths	271
F.3	Multi-carrier BS of E-UTRA and UTRA.....	271
Annex G (Informative):	Regional requirement for protection of DTT	272
G.1	Regional requirement for protection of DTT	272
G.2	Regional requirement for Public Safety LTE BS in Korea	272
Annex H (Informative):	Calculation of EIRP based on manufacturer declarations and site specific conditions	275
H.1	Calculation of EIRP based on manufacturer declarations and site specific conditions.....	275
Annex I (Informative):	Change history	276
History	290	

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

shall indicates a mandatory requirement to do something

shall not indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

[ETSI TS 136 104 V16.9.0 \(2021-04\)](#)

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

should indicates a recommendation to do something

should not indicates a recommendation not to do something

may indicates permission to do something

need not indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

can indicates that something is possible

cannot indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

will indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

will not indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

might indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

might not indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

is (or any other verb in the indicative mood) indicates a statement of fact

is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[ETSI TS 136 104 V16.9.0 \(2021-04\)](#)

1 Scope

The present document establishes the minimum RF characteristics and minimum performance requirements of E-UTRA, E-UTRA with NB-IoT or NB-IoT Base Station (BS).

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

Aggregated Channel Bandwidth: RF bandwidth in which a base station transmits and/or receives multiple contiguously aggregated carriers.

NOTE: The Aggregated Channel Bandwidth is measured in MHz.

Base station receive period: time during which the base station is receiving data subframes or UpPTS.

Base Station RF Bandwidth: RF bandwidth in which a base station transmits and/or receives single or multiple carrier(s) within a supported operating band.

ITEH STANDARD PREVIEW
(standards.iteh.ai)

NOTE: In single E-UTRA carrier operation, the Base Station RF Bandwidth is equal to the channel bandwidth.

Base Station RF Bandwidth edge: frequency of one of the edges of the Base Station RF Bandwidth.

Carrier: modulated waveform conveying the E-UTRA or UTRA physical channels

<https://standards.iteh.ai/catalog/standards/sist/f4be3eb2-7f17-4072-8d0f>

Carrier aggregation: aggregation of two or more component carriers in order to support wider transmission bandwidths

Carrier aggregation band: a set of one or more operating bands across which multiple carriers are aggregated with a specific set of technical requirements.

NOTE: Carrier aggregation band(s) for an E-UTRA BS is declared by the manufacturer according to the designations in Tables 5.5-2 to 5.5-4.

Channel bandwidth: RF bandwidth supporting a single E-UTRA RF carrier with the transmission bandwidth configured in the uplink or downlink of a cell.

NOTE: The channel bandwidth is measured in MHz and is used as a reference for transmitter and receiver RF requirements.

Channel edge: lowest or highest frequency of the E-UTRA carrier, separated by the channel bandwidth.

Contiguous carriers: set of two or more carriers configured in a spectrum block where there are no RF requirements based on co-existence for un-coordinated operation within the spectrum block.

Contiguous spectrum: spectrum consisting of a contiguous block of spectrum with no sub-block gap(s).

DL RS power: resource element power of Downlink Reference Symbol.

DL NRS power: resource element power of Downlink Narrowband Reference Signal.

Downlink operating band: part of the operating band designated for downlink.

Enhanced performance requirements type A: This defines performance requirements assuming baseline receiver as demodulation reference signal based linear minimum mean square error interference rejection combining.

Enhanced performance requirements type B: This defines performance requirements assuming baseline receiver as code word level interference cancellation for intra-cell inter-user interference plus demodulation reference signal based linear minimum mean square error interference rejection combining for inter-cell interference.

Highest carrier: carrier with the highest carrier centre frequency transmitted/received in a specified operating band.

Inter RF Bandwidth gap: frequency gap between two consecutive Base Station RF Bandwidths that are placed within two supported operating bands.

Inter-band carrier aggregation: carrier aggregation of component carriers in different operating bands.

NOTE: Carriers aggregated in each band can be contiguous or non-contiguous.

Inter-band gap: The frequency gap between two supported consecutive operating bands.

Intra-band contiguous carrier aggregation: contiguous carriers aggregated in the same operating band.

Intra-band non-contiguous carrier aggregation: non-contiguous carriers aggregated in the same operating band.

Lower sub-block edge: frequency at the lower edge of one sub-block.

NOTE: It is used as a frequency reference point for both transmitter and receiver requirements.

Lowest carrier: carrier with the lowest carrier centre frequency transmitted/received in a specified operating band.

Maximum output power: mean power level per carrier of the base station measured at the antenna connector in a specified reference condition.

Maximum throughput: maximum achievable throughput for a reference measurement channel.

Mean power: power measured in the channel bandwidth of the carrier.

NOTE: The period of measurement shall be at least one subframe (1ms), unless otherwise stated.

Measurement bandwidth: RF bandwidth in which an emission level is specified.

Multi-band base station: base station characterized by the ability of its transmitter and/or receiver to process two or more carriers in common active RF components simultaneously, where at least one carrier is configured at a different operating band (which is not a sub-band or superseding-band of another supported operating band) than the other carrier(s).

Multi-band transmitter: transmitter characterized by the ability to process two or more carriers in common active RF components simultaneously, where at least one carrier is configured at a different operating band (which is not a sub-band or superseding-band of another supported operating band) than the other carrier(s).

Multi-band receiver: receiver characterized by the ability to process two or more carriers in common active RF components simultaneously, where at least one carrier is configured at a different operating band (which is not a sub-band or superseding-band of another supported operating band) than the other carrier(s).

Multi-carrier transmission configuration: set of one or more contiguous or non-contiguous carriers that a BS is able to transmit simultaneously according to the manufacturer's specification.

NB-IoT In-band operation: NB-IoT is operating in-band when it utilizes the resource block(s) within a normal E-UTRA carrier

NB-IoT guard band operation: NB-IoT is operating in guard band when it utilizes the unused resource block(s) within a E-UTRA carrier's guard-band.

NB-IoT standalone operation: NB-IoT is operating standalone when it utilizes its own spectrum, for example the spectrum currently being used by GERAN systems as a replacement of one or more GSM carriers, as well as scattered spectrum for potential IoT deployment.

Non-contiguous spectrum: spectrum consisting of two or more sub-blocks separated by sub-block gap(s).

Occupied bandwidth: width of a frequency band such that, below the lower and above the upper frequency limits, the mean powers emitted are each equal to a specified percentage $\beta/2$ of the total mean power of a given emission.

Operating band: frequency range in which E-UTRA operates (paired or unpaired), that is defined with a specific set of technical requirements.

NOTE: The operating band(s) for an E-UTRA BS is declared by the manufacturer according to the designations in table 5.5-1.

Output power: mean power of one carrier of the base station, delivered to a load with resistance equal to the nominal load impedance of the transmitter.

Radio Bandwidth: frequency difference between the upper edge of the highest used carrier and the lower edge of the lowest used carrier.

Rated output power: mean power level per carrier that the manufacturer has declared to be available at the antenna connector during the transmitter ON period.

RE power control dynamic range: difference between the power of a RE and the average RE power for a BS at maximum output power for a specified reference condition.

RRC filtered mean power: mean power of an UTRA carrier as measured through a root raised cosine filter with roll-off factor α and a bandwidth equal to the chip rate of the radio access mode.

NOTE 1: The RRC filtered mean power of a perfectly modulated UTRA signal is 0.246 dB lower than the mean power of the same signal.

sTTI: A transmission time interval (TTI) of either one slot or one subslot as defined in [10] on either uplink or downlink.

Sub-band: A sub-band of an operating band contains a part of the uplink and downlink frequency range of the operating band.

iTeh STANDARD PREVIEW

Sub-block: one contiguous allocated block of spectrum for transmission and reception by the same base station.

NOTE: There may be multiple instances of sub-blocks within a Base Station RF Bandwidth.

[ETSI TS 136 104 V16.9.0 \(2021-04\)](#)

Sub-block bandwidth: bandwidth of one sub-block.

<https://standards.iteh.ai/catalog/standards/sist/f4be3eb2-7f17-4072-8d0f-71b84378a52f/etsi-ts-136-104-v16-9-0-2021-04>

Sub-block gap: frequency gap between two consecutive sub-blocks within a Base Station RF Bandwidth, where the RF requirements in the gap are based on co-existence for un-coordinated operation.

Superseding-band: A superseding-band of an operating band includes the whole of the uplink and downlink frequency range of the operating band.

Synchronized operation: operation of TDD in two different systems, where no simultaneous uplink and downlink occur.

Throughput: number of payload bits successfully received per second for a reference measurement channel in a specified reference condition.

Total power dynamic range: difference between the maximum and the minimum transmit power of an OFDM symbol for a specified reference condition.

Transmission bandwidth: RF Bandwidth of an instantaneous transmission from a UE or BS, measured in resource block units.

Transmission bandwidth configuration: highest transmission bandwidth allowed for uplink or downlink in a given channel bandwidth, measured in resource block units.

Transmitter ON period: time period during which the BS transmitter is transmitting data and/or reference symbols, i.e. data subframes or DwPTS.

Transmitter OFF period: time period during which the BS transmitter is not allowed to transmit.

Transmitter transient period: time period during which the transmitter is changing from the OFF period to the ON period or vice versa.

Unsynchronized operation: operation of TDD in two different systems, where the conditions for synchronized operation are not met.

Uplink operating band: part of the operating band designated for uplink.

Upper sub-block edge: frequency at the upper edge of one sub-block.

NOTE: It is used as a frequency reference point for both transmitter and receiver requirements.

3.2 Symbols

For the purposes of the present document, the following symbols apply:

α	Roll-off factor
β	Percentage of the mean transmitted power emitted outside the occupied bandwidth on the assigned channel
BW	Bandwidth
BW _{Channel}	Channel bandwidth
BW _{Channel, CA}	Aggregated Channel Bandwidth, expressed in MHz. BW _{Channel, CA} = F _{edge, high} - F _{edge, low} .
BW _{Channel, block}	Sub-block bandwidth, expressed in MHz. BW _{Channel, block} = F _{edge, block, high} - F _{edge, block, low} .
BW _{Config}	Transmission bandwidth configuration, expressed in MHz, where BW _{Config} = N _{RB} x 180 kHz in the uplink and BW _{Config} = 15 kHz + N _{RB} x 180 kHz in the downlink.
CA_X	Intra-band contiguous CA of component carriers in one sub-block within band X where X is the applicable E-UTRA operating band
CA_X-X	Intra-band non-contiguous CA of component carriers in two sub-blocks within band X where X is the applicable E-UTRA operating band
CA_X-Y	Inter-band CA of component carrier(s) in one sub-block within band X and component carrier(s) in one sub-block within Band Y where X and Y are the applicable E-UTRA operating bands
CA_X-X-Y	CA of component carriers in two sub-blocks within Band X and component carrier(s) in one sub-block within Band Y where X and Y are the applicable E-UTRA operating bands
f	Frequency https://standards.iteh.ai/catalog/standards/sist/14be3eb2-7f17-4072-8d0f-74b84378-52fetsi-136-104-16-9-0-2021-01
Δf	Separation between the channel edge frequency and the nominal -3dB point of the measuring filter closest to the carrier frequency
Δf_{\max}	The largest value of Δf used for defining the requirement
F _C	Carrier centre frequency
F _{C,block, high}	Centre frequency of the highest transmitted/received carrier in a sub-block.
F _{C,block, low}	Centre frequency of the lowest transmitted/received carrier in a sub-block.
F _{C_low}	The carrier centre frequency of the lowest carrier, expressed in MHz.
F _{C_high}	The carrier centre frequency of the highest carrier, expressed in MHz.
F _{edge_low}	The lower edge of Aggregated Channel Bandwidth, expressed in MHz. F _{edge_low} = F _{C_low} - F _{offset} .
F _{edge_high}	The upper edge of Aggregated Channel Bandwidth, expressed in MHz. F _{edge_high} = F _{C_high} + F _{offset} .
F _{edge,block,low}	The lower sub-block edge, where F _{edge,block,low} = F _{C,block,low} - F _{offset} .
F _{edge,block,high}	The upper sub-block edge, where F _{edge,block,high} = F _{C,block,high} + F _{offset} .
F _{offset}	Frequency offset from F _{C_high} to the upper Base Station RF Bandwidth edge, or from F _{C,block, high} to the upper sub-block edge, or F _{C_low} to the lower Base Station RF Bandwidth edge, or from F _{C,block, low} to the lower sub-block edge.
F _{filter}	Filter centre frequency
f_offset	Separation between the channel edge frequency and the centre of the measuring filter
f_offset _{max}	The maximum value of f_offset used for defining the requirement
F _{DL_low}	The lowest frequency of the downlink operating band
F _{DL_high}	The highest frequency of the downlink operating band
F _{UL_low}	The lowest frequency of the uplink operating band
F _{UL_high}	The highest frequency of the uplink operating band
G _{ant}	Net antenna gain
M _{DL}	Offset of NB-IoT Downlink channel number to Downlink EARFCN
M _{UL}	Offset of NB-IoT Uplink channel number to Uplink EARFCN
N _{ant}	Number of transmitter antennas
N _{DL}	Downlink EARFCN
N _{Offs-DL}	Offset used for calculating downlink EARFCN
