Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. www.iso.org/directives

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. www.iso.org/patents

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 29, *Small tools*, Subcommittee SC 9, *Tools with cutting edges made of hard cutting materials*.

This second edition cancels and replaces the first edition (ISO 6262-2:1982), of which it constitutes a minor revision.

ISO 6262 consists of the following parts, under the general title *End mills with indexable inserts*:

— *Part 1: End mills with flatted cylindrical shank*

— *Part 2: End mills with Morse taper shank* [ISO 6262-2:2013](https://standards.iteh.ai/standards/iso/9f5bffff-109c-4066-8323-8aea31a0f1fb/iso-6262-2-2013)

End mills with indexable inserts —

Part 2: End mills with Morse taper shank

1 Scope

This part of ISO 6262 specifies the dimensions of end mills with indexable inserts and Morse taper shank according to ISO 296.

The form and dimensions of the inserts are left to the discretion of the manufacturer.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable to its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 296, *Machine tools — Self-holding tapers for tool shanks*

3 Dimensions

Key

- 1 Morse taper shank
- a The value of 90° shall be the nominal value of the cutting edge angle of the insert. The effective angle obtained on the workpiece depends on the geometry and the diameter of the milling cutter together with the cutting depth.

Figure 1 — Dimensions

Table 1 — Dimensions

Dimensions in millimetres

| d js14 | Morse taper No. ^a | l_1 max. | l |
|-------------|---------------------------------|---------------|-----|
| 16 | 2 | 25 | 94 |
| 20 | 3 | 30 | 116 |
| 25 | 3 | 38 | 124 |
| 32 | 3 | 38 | 124 |
| 40 | 4 | 48 | 157 |
| 50 | 4 | 48 | 157 |

^a The shank dimensions shall be in accordance with ISO 296.
