Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Foreword

(standards.iteh.ai)

This ETSI Standard (ES) has been produced by ETSI Technical Committee Access, Terminals, Transmission and Multiplexing (ATTM).

<https://standards.iteh.ai/catalog/standards/sist/6b24321a-3ee7-412a-b1b3-eb0612102045/etsi-es-205-200-3-2-v1-1-2022-04>

The present document is part 3, sub-part 2 of a multi-part deliverable. Full details of the entire series can be found in part 1 [i.1].

1-1-2022-04

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Executive summary

The present document proposes a series of KPIs to evaluate the operational impact on greenhouse gas emissions of ICT infrastructures in operation. The present document only deals with carbon intensity related to work done as defined in relevant standards ETSI EN 305 200-2-3 [2], ETSI EN 305 200-2-2 [1] and ETSI EN 305 200-3-1 [3]. It does not consider greenhouse gas related to other LCA phases (e.g. construction, decommissioning) nor other LCA considerations (e.g. raw materials, water) that will be dealt of in a future part of the series.

Introduction

Greenhouse gas emissions continue to rise, a trend that will continue in the future, while broadband penetration is introducing new active equipment to the network architecture. In this context, and to reflect other environmental aspects of sustainability, it is vital that the main telecommunication operators implement effective general engineering of fixed and mobile broadband networks and sites provisioning, managing or using those networks (i.e. ICT sites) in order to respond to critical issues of greenhouse gas emissions while proposing essential solutions to broadband deployment. To guide this process, it is essential that metrics are defined, termed Global Key Performance Indicators (KPIs), that enable greenhouse gas usage to be managed more effectively.

The Global Key Performance Indicators specified in the ETSI EN 305 200 [i.2] series address operational infrastructures and do not consider design or operation of individual components comprising those infrastructures.

ETSI EN 305 200 [i.2] series of standards comprises:

- ETSI EN 305 200-1 [i.1] a generic requirements document addressing Global KPIs for operational infrastructures;
- a sub-series ETSI EN 305 200-2 that defines the Global KPIs, and drives energy management targets, for specific operational networks and sites and which describes how the Global KPIs are to be applied (which may be used to support future regulatory objectives):

- ETSI EN 305 200-2-1 [i.11]: ICT sites;
- ETSI EN 305 200-2-2 [1]: Fixed broadband access networks;

NOTE: Excluding cable access networks.

- ETSI EN 305 200-2-3 [2]: Mobile broadband access networks.

The standards do not define weightings of Objective KPIs or targets or limits for Global KPIs but may contain information on values that have been used by certain organizations:

- a sub-series ETSI EN 305 200-3 including the present document that defines particular implementations of Global KPIs within ICT sites based on the requirements of ETSI EN 305 200-2-1 [i.11], and which may define levels of performance to simplify and provide clearer understanding of Global KPIs allowing the evaluation of performance of energy and carbon use management in ICT sites:
 - ETSI EN 305 200-3-1 [3]: Data processing and Communications Energy Management (DCEM);
 - ETSI EN 305 200-3-2: the present document;
- a sub-series ETSI EN 305 200-4 including ETSI EN 305 200-4-4 [i.7] that defines design assessments of Global KPIs, and drives energy management targets, for specific operational networks and sites and which describes how the Global KPIs are to be applied (which may be used to support future regulatory objectives).

These standards may be considered to be a contribution to the application of ISO 14001 [i.8] in relation to the development of policy for the continuous improvement of greenhouse gas management and will accelerate:

- the availability of operational infrastructure architectures and network implementations that reduce greenhouse gas emissions;
- the definition and attainment objectives for other environmental aspects of sustainability for operational broadband networks.

1 Scope

The present document specifies the requirements for a Global KPI for carbon management in operation (KPI_{DCCM}) and their underpinning Objective KPIs addressing the following objectives for the ICT sites of broadband deployment:

- Greenhouse gas emissions
- Effectiveness of energy generation over greenhouse gas emissions
- Avoided greenhouse gas emission
- Reused greenhouse gas emission

The management of energy efficiency is outside the scope of the present document.

Within the present document:

- clause 4.1 describes the energy parameters for ICT sites together with inclusions/exclusions of different energies contributions;
- clause 4.2 specifies the requirements for measurement, calculation, classification and reporting of KPI_{DCCM} .

The present document addresses CO₂ equivalent emissions (CO₂eq) resulting from energy consumption by *operational equipment* in ICT sites or groups of sites. It does not deal with other GHG gas emissions coming from cooling/heating (including heat recovery systems equipment leakages such as described in the Directive F-Gas EU-517-2014 [i.6] and emissions related to manufacturing, transportation and end of life.

The Global KPI alone is not designed for comparison of ICT sites or groups of sites. It does not define an ICT site as good or bad unless combined with other parameters considered relevant for a comparison, such as local climatic conditions, availability requirements or purpose of the ICT site.

The present document relies on energy measurement and task effectiveness principles defined in standards ETSI EN 305 200-3-1 [3] for data centres, ETSI EN 305 200-2-2 [1] for fixed networks and ETSI EN 305 200-2-3 [2] for mobile networks.

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the following terms apply:

carbon emission factor: kilograms of equivalent carbon dioxide emitted per kWh (kg of CO₂eq/kWh)

carbon intensity: quantity of CO₂ equivalent emission per unit of final energy consumption for an operational period of time

energy consumption: total consumption of energy by an operational infrastructure

final energy consumption: energy consumption as seen by the consumer of a power source

NOTE: This consumption does not include losses resulting from transformation, storage and transportation of primary energy, if any.

global KPI: compound KPI obtained by combination of objective KPIs in order to assess overall performance of carbon management

ICT equipment: equipment providing data storage, data processing and data transport services

ICT site: site containing structures or group of structures dedicated to the accommodation, interconnection and operation of ICT equipment together with all the facilities and infrastructures for power distribution and environmental control together with the necessary levels of resilience and security required to provide the desired service availability

objective KPI: KPI assessing one of the objectives of operational carbon emission which is subsequently used to define a Global KPI for Carbon management

operational infrastructure: combination of information technology equipment and/or network telecommunications equipment together with the power supply and environmental control systems necessary to ensure provision of service, including climatic conditions, security and safety installations

renewable energy: energy produced from dedicated generation systems using resources that are naturally replenished

NOTE: In addition, for the purpose of the present document, the energy required for production is not higher than 10 % of the produced energy.

ton: non-SI unit of mass equal to 1 000 kilograms

3.2 Symbols

For the purposes of the present document, the following symbols apply:

CEF_i	Carbon Emission Factor of source i
CEF_{REFi}	Carbon Emission Factor reference for source i
CE_{REC}	Carbon Emission Requirements avoided by reusing ICT site waste heat
$DC_{C.CLASS}$	Carbon emission Class part of KPI_{DCCM}
DC_{CE}	Carbon emission part of KPI_{DCCM}
DC_{CMP}	Carbon Management Performance
DC_G	Energy consumption gauge
EC_i	Total Energy consumption of source i
EC_{REF}	Reference Carbon Emission of an ICT site
KPI_{AE}	Objective KPI for "CO ₂ eq Avoided Emission"
KPI_{DCCM}	Global KPI for DCCM
KPI_{EC}	Objective KPI for "Energy Consumption"
KPI_{CE}	Objective KPI for "CO ₂ eq Emission"

KPI_{CEE}	Objective KPI for "Carbon Emission Effectiveness"
KPI_{REC}	Objective KPI for "CO ₂ eq RECYcled emission"
KPI_{TE}	Objective KPI for "Task Effectiveness"
W_{AE}	Weighting factor for Avoided Emissions
W_{REC}	Weighting factor for RECYcled emissions

3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CEF	Carbon Emission Factor
CO ₂ eq	CO ₂ equivalent
DCCM	Dataprocessing & Communications Carbon Management
DCEM	Dataprocessing and Communications Energy Management
EC	European Community
EU	European Union
GHG	GreenHouse Gas
GWP	Global Warming Potential
ICT	Information and Communication Technology
IPCC	Intergovernmental Panel on Climate Change
KPI	Key Performance Indicator
kWh	kiloWatt per hour
LCA	Life Cycle Assessment
MWh	MegaWatt per hour
OEU	Operational energy Efficiency for Users (ETSI Industry Specification Group)
PV	PhotoVoltaic
SEAP	Sustainable Energy Action Plan
SI	International System of Units

4 Definition of Key Performance Indicators

4.1 Objective KPIs for ICT sites operation

4.1.1 Carbon Emission of an ICT Site (KPI_{CE})

4.1.1.1 General

The operational Carbon emission of an ICT site is directly correlated to its energy consumption KPI_{EC} as defined in appropriate related standard (ETSI EN 305 200-2-2 [1], ETSI EN 305 200-2-3 [2] or ETSI EN 305 200-3-1 [3]).

All energy required to maintain an ICT site at its design level of service availability, including energy required by hosted ICT equipment and by technical equipment such as cooling, power distribution, surveillance systems, access control, flood and fire detection, fire extinguishing system and lighting are allocated to KPI_{EC} .

All other energy consumptions within the boundaries of an ICT site but not necessary to deliver the design level of service availability (such as office facilities) are out of the scope and are not included in any measurements of KPI_{EC} .

All energy consumptions shall be recorded by energy meters when possible. In other cases, final energy consumption by systems for producing and distributing other kinds of energy (e.g. cold loop network) shall be recorded.

Energy sources shall be clearly identified and translated into equivalent CO₂ emission (CO₂eq).

4.1.1.2 Scale

KPI_{CE} applies to all ICT sites of all sizes and includes ICT rooms located in buildings.

4.1.1.3 Evolution

KPI_{CE} applies to all states of ICT sites, from initial operation to end of life.

4.1.1.4 Formula

$$KPI_{CE} = \sum_{i=1}^n (EC_i \times CEF_i)$$

Where:

- EC_i : Yearly energy consumption by ICT site from power source i (e.g. local, heat/cold loops, grid) expressed as MWh.
- CEF_i : Yearly average Carbon Emission Factor of the source i .
- KPI_{CE} shall be expressed in Tons of CO₂eq.

NOTE: $\sum_{i=1}^n EC_i = KPI_{EC}$.

4.1.1.5 Measurement points and processes

Measurement points and processes related to energy consumptions EC_i are defined in appropriate related standard (ETSI EN 305 200-2-2 [1], ETSI EN 305 200-2-3 [2] or ETSI EN 305 200-3-1 [3]).

Emission Factors CEF_i applicable for each type of energy source at the time of writing as well as related general principles are listed in Annex A.

NOTE 1: If the country mix value for the considered period is not already known at the date of the assessment, the latest official known value will be used.

NOTE 2: Are considered only scope 1 and scope 2 emissions.

NOTE 3: Indirect GHG emissions due to refrigerant and GHG leakages are not considered.

4.1.2 Carbon Emission Effectiveness (KPI_{CEE})

4.1.2.1 General

KPI_{CEE} is the ratio of CO₂eq to actual work done in an ICT site over one year.

4.1.2.2 Scale

KPI_{CEE} applies to all ICT sites of all sizes and includes ICT rooms located in buildings.

4.1.2.3 Evolution

KPI_{CEE} applies to all states of ICT sites, from initial operation to end of life.

4.1.2.4 Formula

$$KPI_{CEE} = \frac{KPI_{CE} \times KPI_{TE}}{KPI_{EC}}$$

Where:

- KPI_{CE} is the Carbon emission KPI as defined in clause 4.1.1.
- KPI_{EC} is the total energy consumption as defined in appropriate related standard (ETSI EN 305 200-2-2 [1], ETSI EN 305 200-2-3 [2] or ETSI EN 305 200-3-1 [3]).
