

Designation: A 193/A 193M - 08b

# Standard Specification for Alloy-Steel and Stainless Steel Bolting Materials for High Temperature or High Pressure Service and Other Special Purpose Applications<sup>1</sup>

This standard is issued under the fixed designation A 193/A 193M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\varepsilon$ ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the Department of Defense.

#### 1. Scope\*

1.1 This specification<sup>2</sup> covers alloy and stainless steel bolting material for pressure vessels, valves, flanges, and fittings for high temperature or high pressure service, or other special purpose applications. The term *bolting material* as used in this specification covers bars, bolts, screws, studs, stud bolts, and wire. Bars and wire shall be hot-wrought. The material may be further processed by centerless grinding or by cold drawing. Austenitic stainless steel may be carbide solution treated or carbide solution treated and strain-hardened. When strain hardened austenitic steel is ordered, the purchaser should take special care to ensure that Appendix X1 is thoroughly understood.

1.2 Several grades are covered, including ferritic steels and austenitic stainless steels designated B5, B8, and so forth. Selection will depend upon design, service conditions, mechanical properties, and high temperature characteristics.

1.3 The following referenced general requirements are indispensable for application of this specification: Specification A 962/A 962M.

NOTE 1—The committee formulating this specification has included fifteen steel types that have been rather extensively used for the present purpose. Other compositions will be considered for inclusion by the committee from time to time as the need becomes apparent.

Note 2—For grades of alloy-steel bolting material suitable for use at the lower range of high temperature applications, reference should be made to Specification A 354.

NOTE 3—For grades of alloy-steel bolting material suitable for use in low temperature applications, reference should be made to Specification A 320/A 320M.

1.4 Nuts for use with this bolting material are covered in Section 14.

1.5 Supplementary Requirements S1 through S14 are provided for use when additional tests or inspection are desired. These shall apply only when specified in the purchase order.

1.6 This specification is expressed in both inch-pound units and in SI units. However, unless the order specifies the applicable M specification designation (SI units), the material shall be furnished to inch-pound units.

1.7 The values stated in either inch-pound units or SI units are to be regarded separately as standard. The values stated in each system are not exact equivalents; therefore, each system must be used independently of the other. Combining values from the two systems may result in nonconformance with the specification. Within the text, the SI units are shown in brackets.

## 3. General Requirements and Ordering Information

3.1 The inquiry and orders shall include the following, as required, to describe the desired material adequately:

3.1.1 Heat-treated condition (that is, normalized and tempered, or quenched and tempered, for the ferritic materials, and carbide solution treated (Class 1), carbide solution treated after

finishing (Class 1A), and carbide solution treated and strainhardened (Classes 2, 2B and 2C), for the austenitic stainless steels; Classes 1B and 1C apply to the carbide solution-treated nitrogen-bearing stainless steels; Class 1D applies to material carbide solution treated by cooling rapidly from the rolling temperature),

3.1.2 Description of items required (that is, bars, bolts, screws, or studs),

3.1.3 Nuts, if required by purchaser, in accordance with 14.1,

3.1.4 Supplementary requirements, if any, and

3.1.5 Special requirements, in accordance with 7.1.5.1, 7.2.6, 9.1, 14.1, and 15.1.

3.2 *Coatings*—Coatings are prohibited unless specified by the purchaser (See Supplementary Requirements S13 and S14). When coated fasteners are ordered the purchaser should take special care to ensure that Appendix X2 is thoroughly understood.

### 4. Common Requirements

4.1 Material and fasteners supplied to this specification shall conform to the requirements of Specification A 962/A 962M. These requirements include test methods, finish, thread dimensions, marking, certification, optional supplementary requirements, and others. Failure to comply with the requirements of Specification A 962/A 962M constitutes nonconformance with this specification. In case of conflict between this specification and Specification A 962/A 962M, this specification shall prevail.

### 5. Manufacture (Process)

5.1 The steel shall be produced by any of the following processes: open-hearth, basic-oxygen, electric-furnace, or vacuum-induction melting (VIM). The molten steel may be vacuum-treated prior to or during pouring of the ingot or strand casting.

5.2 *Quality*—See Specification A 962/A 962M for requirements.

## 6. Discard

6.1 A sufficient discard shall be made to secure freedom from injurious piping and undue segregation.

## 7. Heat Treatment

### 7.1 Ferritic Steels

7.1.1 Ferritic steels shall be allowed to cool to a temperature below the cooling transformation range immediately after rolling or forging. Materials to be liquid quenched shall then be uniformly reheated to the proper temperature to refine the grain (a group thus reheated being known as a *quenching charge*), quenched in a liquid medium under substantially uniform conditions for each quenching charge, and tempered. Materials to be normalized and tempered or air-quenched and tempered shall be reheated to the proper temperature to refine the grain, cooled uniformly in air to a temperature below the transformation temperature shall be as specified in Tables 2 and 3.

<sup>B</sup> Product analysis—Individual determinations sometimes vary from the specified limits on ranges as shown in the tables. The several determinations of any individual element in a heat may not vary both above and below the specified range.

<sup>C</sup> Typical steel compositions used for this grade include 4140, 4142, 4145, 4140H, 4142H, and 4145H.

<sup>D</sup> For bar sizes over 3<sup>1</sup>/<sub>2</sub> in. [90 mm], inclusive, the carbon content may be 0.50 %, max. For the B7M grade, a minimum carbon content of 0.28 % is permitted, provided that the required tensile properties are met in the section sizes involved; the use of AISI 4130 or 4130H is allowed.

<sup>E</sup> Total of soluble and insoluble.

<sup>F</sup> Classes 1 and 1D are solution treated. Classes 1, 1B, and some 1C (B8R and B8S) products are made from solution treated material. Class 1A (B8A, B8CA, B8MA, B8PA, B8TA, B8LNA, B8MLNA, B8NA, and B8MNA) and some Class 1C (B9RA and B8SA) products are solution treated in the finished condition. Class 2 products are solution treated and strain hardened.

#### TABLE 2 Continued

Grade, Diameter, in.	Heat Treatment <sup>B</sup>	Tensile Strength, min, ksi	Yield Strength, min, 0.2 % offset, ksi	Elongation in 4 D, min %		Hardness, max
	Aus	stenitic Steels				
over 2 to 21/2 incl		90	65	30	40	321 HB or 35 HRC
over 21/2 to 3 incl		80	55	30	40	321 HB or 35 HRC
Class 2C: B8M3 <sup>D</sup> 2 and under	carbide solution treated and strain hardened	85	65	30	60	321 HB or 35 HRC
over 2		85	60	30	60	321 HB or 35 HRC

<sup>A</sup> To meet the tensile requirements, the Brinell hardness shall be over 200 HB (93 HRB).

<sup>B</sup> Class 1 is solution treated. Class 1 A is solution treated in the finished condition for corrosion resistance; heat treatment is critical due to physical property requirement. Class 2 is solution treated and strain hardened. Austenitic steels in the strain-hardened condition may not show uniform properties throughout the section particularly in sizes over <sup>3</sup>/<sub>4</sub> in. in diameter.

<sup>C</sup> For sizes <sup>3</sup>/<sub>4</sub> in. in diameter and smaller, a maximum hardness of 241 HB (100 HRB) is permitted.

<sup>D</sup> For diameters 1½ and over, center (core) properties may be lower than indicated by test reports which are based on values determined at ½ radius.

### TABLE 3 Mechanical Requirements —Metric Products

Class	Diameter, [mm]	Minimum Tempering Temperature, °C	Tensile Strength, min, MPa	Yield Strength, min, 0.2 % offset, MPa	Elongat in 4D min, %		rea, max
		Ferritic Steels	;				
B5 4 to 6 % chromium B6	up to M100, incl	593	690	550	16	50	
13 % chromium	up to M100, incl	593	760	585	15	50	
B6X 13 % chromium B7	up to M100, incl	593	620	485	16	50	26 HRC
Chromium-molybdenum	M64 and under	593	860	720	16	50	321 HB or 35 HRC
	over M64 to M100	593	795	655	16	50	321 HB or 35 HRC
	over M100 to M180	593	690 C	515	18	50	321 HB or 35 HRC
B7M <sup>4</sup> Chromium-molybdenum	M100 and under	620	690	550	18	50	235 HB or 99 HRB
	over M100 to M180 ASTM A	193/A <sub>620</sub> 31	1-08b690	515	18	50	235 BHN or
tps://standards.iteh.ai/catalo							99 HRB
Chromium-molybdenum-vanadium	M64 and under	650	860	725	18	50	321 HB or 35 HRC
	over M64 to M100	650	760	655	17	45	321 HB or 35 HRC
	over M100 to M180	650	690	585	16	45	321 HB or 35 HRC
Class Diameter, mm	Heat Treatment <sup>B</sup>		Tensile Strength, min, MPa	Yield Strength, min, 0.2 % offset, MPa	Elongation in 4 D, min %	Reduction of Area, min %	Hardness, max
		Austenitic Stee	ls				
Classes 1 and 1D; B8, B8M, B8P, B8I B8MLN, all diameters			515	205	30	50	223 HB <sup>C</sup> or 96 HRE
Class 1: B8C, B8T, all diameters	carbide solution treated		515	205	30	50	223 HB <sup>C</sup> or 96HRB
Class 1A: B8A, B8CA, B8MA, B8PA, B8TA, B8LNA, B8MLNA, B8NA, B8MI B8MLCuNA, all diameters	carbide solution treated in the fi NA condition	nished	515	205	30	50	192 HB or 90 HRB
Classes 1B and 1D: B8N, B8MN, and B8MLCuN, all diameters	carbide solution treated		550	240	30	40	223 HB <sup>C</sup> or 96 HRE
Classes 1C and 1D: B8R, all diameter			690	380	35	55	271 HB or 28 HRC
Class 1C: B8RA, all diameters	carbide solution treated in the fi condition	nished	690	380	35	55	271 HB or 28 HRC
Classes 1C and 1D: B8S, all diameter	rs carbide solution treated		655	345	35	55	271 HB or 28 HRC
