This amendment A1 modifies the European Standard EN 438-2:2016; it was approved by CEN on 5 October 2018.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for inclusion of this amendment into the relevant national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

**The STANDARD PREVIEW**

([standards.cenelec.eu/stdcntr/standard/730187/73018700360](http://standards.cenelec.eu/stdcntr/standard/730187/73018700360))

This amendment exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

[SIST EN 438-2:2016+A1:2019](#)

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## The STANDARD PREVIEW (standards.iteh.ai)

SIST EN 438-2:2016+A1:2019  
<https://standards.iteh.ai/catalog/standards/sist/7ca0197c-7e6b-40ae-a260-a97bc75221b1/sist-en-438-2-2016a1-2019>

## European foreword

This document (EN 438-2:2016+A1:2018) has been prepared by Technical Committee CEN/TC 249 "Plastics", the secretariat of which is held by NBN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2019, and conflicting national standards shall be withdrawn at the latest by June 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document includes Amendment 1 approved by CEN on 28 August 2018.

This document supersedes A1 EN 438-2:2016. A1

The start and finish of text introduced or altered by amendment is indicated in the text by tags A1 A1.

EN 438, *High-pressure decorative laminates (HPL) — Sheets based on thermosetting resins (usually called laminates)*, consists of the following parts:

- Part 1: *Introduction and general information* STANDARD PREVIEW
- Part 2: *Determination of properties* ([standards.iteh.ai](https://standards.iteh.ai/standards/standard/7ca0197c-7e6b-40ae-a260-a97bc75221b1/sist-en-438-2-2016a1-2019))
- Part 3: *Classification and specifications for laminates less than 2 mm thick intended for bonding to supporting substrates* SIST EN 438-2:2016+A1:2019  
<https://standards.iteh.ai/catalog/standards/sist/7ca0197c-7e6b-40ae-a260-a97bc75221b1/sist-en-438-2-2016a1-2019>
- Part 4: *Classification and specifications for Compact laminates of thickness 2 mm and greater*
- Part 5: *Classification and specifications for flooring grade laminates less than 2 mm thick intended for bonding to supporting substrates*
- Part 6: *Classification and specifications for Exterior-grade Compact laminates of thickness 2 mm and greater*
- Part 7: *Compact laminate and HPL composite panels for internal and external wall and ceiling finishes*
- Part 8: *Classification and specifications for design laminates*
- Part 9: *Classification and specifications for alternative core laminates*

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## 1 Scope

This document specifies the methods of test for determination of the properties of high-pressure decorative laminates as defined in Clause 3. These methods are primarily intended for testing the sheets specified in EN 438-3, EN 438-4, EN 438-5, EN 438-6, EN 438-8, and EN 438-9.

The precision of the test methods, specified in this European Standard, is not known because inter-laboratory data are not yet available. When inter-laboratory data will be obtained, precision statements will be added to the test method at the following revision. For those test methods having an end point determination based on subjective judgement, it is not meaningful to make a statement of precision.

### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 438-1 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

### 4 Assessment of appearance

#### 4.1 Principle

Laminates shall be inspected for surface appearance under standardised conditions of lighting and viewing.

#### 4.2 Apparatus

**4.2.1** Horizontal inspection table, of height approximately 700 mm and large enough to accommodate the largest sheets to be inspected.

**4.2.2** The light source shall provide a diffused illumination of  $(1200 \pm 400)$  lx over the whole area of the largest sheets to be inspected. This may be either diffused daylight or diffused artificial daylight.

**A1** Deleted text. **A1** When artificial daylight is used, it shall have a correlated colour temperature of 5000 K to 6500 K. Both of them shall be in accordance with EN ISO 3668.

A convenient distance of the lights from the inspection table is approximately 1,5 m.

#### 4.3 Test specimen

The specimen shall be the laminate under test, as supplied by the manufacturer.

#### 4.4 Procedure

Place the laminate, decorative face uppermost, on the inspection table. Wipe it free of any loose contamination with a soft cloth, using a suitable cleaning agent if necessary. Inspect it from the distance required by the relevant part of EN 438 for defects such as smudges, smears, fingerprints, scratches,

foreign particles, damage or any other form of blemish evident within the decorative surface. In case of cut to size panels of high-pressure decorative alternative core laminate(s), the inspection shall be performed on the edges too. The evaluation of the total area of spot-type defects in square millimetres and of the total length of hair-like defects in millimetres may be carried out with the help of the Tappi Size Estimation Chart or with an equivalent system<sup>1)</sup>. In case of dispute the inspection shall be carried out by three observers using the Tappi Chart or an equivalent system.

The inspector shall use normal vision, corrected if necessary. In cases of doubt or dispute, three observers shall be required for the visual assessment. All observers shall have good colour vision. In case of three observers, the reported rating for the test surface shall be the average to the nearest nominal value.

#### 4.5 Test report

The test report shall include the following information:

- a) reference to this European Standard;
- b) name, type and nominal thickness of the product;
- c) size of the laminate under test;
- d) viewing distance;
- e) total area of spot-type defects in square millimetres;
- f) total length of hair-like defects in millimetres;
- g) any deviation from the specified test method;
- h) date of the test.

### 5 Determination of thickness

#### 5.1 Principle

The thickness of a laminate is measured using a micrometer or a dial gauge indicator.

#### 5.2 Apparatus

Thickness gauge, (ratchet-type micrometer or dial gauge indicator), having two flat parallel measuring surfaces of diameter 6 mm and capable of being read to 0,01 mm. When the thickness of a decorative laminate is being measured, the two surfaces shall exert a pressure of 10 kPa to 100 kPa upon each other.

#### 5.3 Test specimen

The specimen shall be the laminate under test, as supplied by the manufacturer.

#### 5.4 Procedure

Check the gauge for accuracy and then determine the thickness of the laminate to the nearest 0,01 mm. The thickness shall be measured at the centre of each edge, at a distance of at least 20 mm from the edge of the sheet.
