## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#).

The committee responsible for this document is ISO/TC 8, *Ships and marine technology*, Subcommittee SC 8, *Ship design*.

# Ships and marine technology — Oil tank hatches

## 1 Scope

This International Standard specifies the classification, structure and main dimensions, materials, quality of manufacture, testing of watertightness and designation for oil tank hatches for application on board ships in order to ensure interchangeability of the hatches. The remaining dimensions, welding, and other details are left to the manufacturer.

These hatches generally conform to the requirements of the International Convention on Load Lines 1966 (ILLC66). These structures and specifications of oil-tight hatch covers in this International Standard meet IACS UR S26 requirements. The possibility for application in position 1 and position 2 has to be considered for each situation and, where necessary, the hatch covers shall be provided with additional stiffening.

This International Standard is applicable to the design, manufacturing, and test of accommodation ladders, as well as accommodation ladder used specifically in combination with pilot ladder (hereinafter referred as “pilot accommodation ladder”).

Users of this International Standard should note that while observing the requirements of this International Standard, they should, at the same time, ensure compliance with such statutory requirements, rules, and regulations as may be applicable to the individual ship concerned.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 8501-1, *Preparation of steel substrates before application of paints and related products — Visual assessment of surface cleanliness — Part 1: Rust grades and preparation grades of uncoated steel substrates and of steel substrates after overall removal of previous coatings.*

## 3 Classifications

### 3.1 Types

Oil tank hatches are divided into the following types, see [Table 1](#).

Table 1 — Classification of oil tank hatches

Dimensions in millimetres

Types		Definition	Nominal size	Application in accordance with ILLC66 in position (s)
A (circular)	A1	circular flat hatch cover	600, 700, 800, 900, 1 000, 1 200	2
	A1F	circular flat hatch cover with stiffener		1
	A2	circular curve hatch cover		2
	A2F	circular curve hatch cover with stiffener		1
B (long circular)	B	long circular hatch cover	600 × 800, 750 × 1 200, 750 × 1 300, 750 × 1 500, 850 × 1 500	2
	BF	long circular hatch cover with stiffener		1
C (upper circular, lower long circular)	C1	flat hatch cover (upper circular, lower long circular)	750 (750 × 1 200) <sup>a</sup> 750 (750 × 1 300) <sup>a</sup> 750 (750 × 1 500) <sup>a</sup> 850 (850 × 1 500) <sup>a</sup> 900 (900 × 1 500) <sup>a</sup>	2
	C1F	flat hatch cover with stiffener (upper circular, lower long circular)		1
	C2	curve hatch cover (upper circular, lower long circular)		2
	C2F	curve hatch cover with stiffener (upper circular, lower long circular)		1

<sup>a</sup> The data between parentheses are the size of lower long circular.
